Why THE MONETARY TIMES OF CANADA IS ONE OF THE BEST ADVERTISING MEDIUMS

1.—Reputation. "*The Monetary Times*" is conducted upon lines which have gained for it the highest reputation for integrity and independence of judgment, and its opinions and pronouncements as regards new issues offered for public subscription, and other like matters with which it essentially deals, are respected accordingly.

2.—Circulation. "*The Monetary Times*" has the largest circulation of any financial and insurance weekly in Canada. It circulates extensively not only throughout Canada but also in the United Kingdom and in every financial center throughout the world.

3.—Readers. "*The Monetary Times*" by the nature of its contents is of interest to all classes of investors. It appeals to a vast and constantly increasing number of readers, including Government and Municipal Authorities, Bankers, Insurance Officials, Directors, Managers and Secretaries of Companies and members of the various Stock Exchanges—by the great majority of whom the paper is not only read, but carefully filed for reference.

4.—Prominence of Advertisements. The space available for advertisements being strictly limited, announcements appearing therein secure very marked prominence.

We can guarantee all advertisements either alongside or opposite reading matter.

5.—Advertising Policy. Advertisements which are apparently designed to entrap the unwary, to induce people to part with hard-earned savings, and to tempt necessitous debtors to take almost the only step which could possibly make their financial troubles greater, are consistently declined by "*The Monetary Times.*" The business of newspaper publishing is not in the opinion of the owners of "*The Monetary Times,*" one which is free from moral responsibility.

For these reasons "*The Monetary Times*" offers an excellent, if not absolutely unique, medium for the announcements of all who desire to cultivate business with a clientèle of the highest class.

Sample copies and advertising rates cheerfully supplied.

The Monetary Times was established in 1867, the year of Confederation. It absorbed, in 1869, The Intercolonial Journal of Commerce, of Montreal; in 1870, The Trade Review, of Montreal, and the Toronto Journal of Commerce.

The Monetary Times does not necessarily endorse the statements or opinions of its correspondents, nor does it hold itself responsible therefor.

The Monetary Times invites information from its readers to aid in excluding from its columns fraudulent and objectionable advertisements. All information will be treated confidentially.

SUBSCRIBERS PLEASE NOTE:

When changing your mailing instructions, be sure to state fully *both* your old and your new address.

All mailed papers are sent direct to Friday evening trains. Any subscriber who receives his paper late will confer a favor by complaining to the Circulation Department, 62 Church Street, Toronto.

Retrospect and Prospect

By FRED. W FIELD

WAR has brought prosperity to Canada because Mars is the dominating customer, ordering in record quantities everything we have to sell. Exhorting us to increase capacity to fill larger orders, he is requiring also that we help finance his purchases. Had Canada been able to borrow abroad in war time, as in former years, it would have sought substantial sums. The closing of the British money markets in 1914 to applications for capital, except for war purposes, turned our borrowing to New York. There we raised substantial sums until that market was closed in April last. We must depend now upon our own financial strength and resources to carry on the nation's affairs, our share of the war, and the financing of British purchases here, which are the pivot of our prosperity to-day.

War conditions have given a realization of what we can do. We know something of our investment power which hitherto we thought did not exist. We know more of the possibilities of factory and agricultural production. We know that the national muscles have successfully passed a severe test. We have much to learn, however, as to economy in production, general organization, marketing at home and abroad, and so on.

In international finance, the Dominion has cut a figure, even though small. Previously its presence in that arena was with cap, and prospectus, in hand. Then it was borrowing abroad hundreds of millions annually. Running up an adverse trade balance, we regarded apprehensively a national debt of less than $400,000,000. To-day, borrowings abroad have been reduced to a minimum. Our four war loans aggregating $450,000,000 were subscribed to the extent of $982,000,000. Credits of more than $400,000,000 have been advanced for British purchases here. At Ottawa, $1,000,000,000 of bullion has been handled since the war commenced. There the Bank of England has a gold depository. There also is one of the largest refineries in the world. We have issued over $100,000,000 of Dominion bonds to fund temporary indebtedness in England. These bonds were used as the basis of Imperial banking credits in the United States and Canada from which payments were made on this side of the Atlantic. Canadian securities have been used by the British government as part of the collateral for their large loans. After the war, Canadian investors will take an increasing share of their own securities.

It is important that we should fully realize that the nation's industrial and agricultural activities and prosperity at present depend almost entirely on war orders. To the end of 1917, the value of such orders placed in Canada by the Canadian, British and Allied governments was not less than $1,800,000,000. They include shells, flour, blankets, wheat, cheese, butter, meats, oats, canned salmon, fish, ships, all the thousand and one things required for war.

Since the outbreak of war, the Imperial Munitions Board has placed in Canada, on behalf of Great Britain, orders for $925,000,000 of munitions. The orders placed last year alone were valued at $263,000,000. Arrangements were made by the Dominion government in the fall to advance $25,000,000 monthly for munitions to the end of 1917. Thus, to date, we have received orders through the Imperial Munitions Board valued at $1,000,000,000 for shells, fixed ammunition, etc.

Our prosperous conditions cannot continue unless we save and invest every dollar possible in war loans. The loans may then be used to establish the credits which Britain needs in order to continue to make her large purchases in this country. Canada's prosperity and activities depend almost entirely upon the extent of our ability to save and invest in the war loans.

War orders are waiting for us in large volume if we can arrange to finance them. If not, the orders will have to go elsewhere, probably to our nearest neighbor, who is doing everything possible, not only to win the war, but also to supply Britain with all she needs, at the same time keeping American prosperity at its record height.

For almost three years, Great Britain has borne the heaviest part of the financial burden of the war for herself, for her allies, and for the Dominions. There is a substantial trade balance against her in the United States because of her large war purchases there. She must, at this time, resort to borrowing funds in the countries in which she is making her war purchases.

Changes in Financial Markets

When the war first broke out, Great Britain agreed to advance Canada £2,000,000 monthly for the financing of its share of the war. This continued for nearly a year when the Dominion was able to finance all its war expenditures in Canada. Britain arranged in the fall of 1916 to loan £30,000,000 for war purposes, to be drawn upon as necessary. Since then, the Imperial government has made advances to finance our war expenditures in England and at the front. The Canadian government has established credits from time to time for British war purchases here. Up to October 31st last we had advanced to Great Britain $403,000,000 and the Imperial government had advanced to us $378,584,160. Of this we repaid $107,612,029 in dollar bonds, leaving net advances to us of $270,972,130. The net amount in our favor, therefore, was $132,027,869.

Since the war commenced, our financial requirements and markets have undergone rapid changes. The British people had invested in Canada prior to the war nearly $3,000,000,000, the greater part in our securities. Upon the foundation of British capital, the Dominion of Canada was built. When the war commenced and London was closed to our borrowing for ordinary purposes, we turned to New York. In 1916, of our total bond issues of $317,000,000 the United States purchased nearly 65 per cent. Previously Britain had purchased from 50 to 80 per cent. of all the bonds we offered each year. In 1915, the United States purchased over 42 per cent. of our total bond issues aggregating nearly $342,000,000. Last year, the New York market was open to us only until April, when the United States entered the war. By special consent of the United States Treasury, the Dominion government obtained in July from New York bankers a two-year loan of $100,000,000. During the remainder of the year, we were compelled to curtail ordinary expenditures and to finance at home.

Increasing Investment Power

The experience has demonstrated the increasing investment power of the country. With the subscription of over $800,000,000 of war loans in two years, the interest payments to Canadians on these issues alone will exceed $40,000,000 annually. In 1915, for the first time, Canadian investors purchased a substantial proportion of the Dominion's bond issues, namely, 44 per cent. In 1916, the figure was 34 per cent. and last year considerably higher again.

As the war continues, the more will its business and finance occupy our attention. By October last, war loans had the right-of-way in Canada, the United States and Great Britain. Little attention was paid to other borrowing. The United States has loaned out of Liberty Loan funds, to Britain and the Allies over $3,883,000,000 since it entered the war. No advances were made to the Dominion in that way, although, as previously noted, we were able to borrow $100,000,000 from New York bankers in July.

A certain amount of borrowing by Canada in the United States is necessary in order that the balance of trade between the two countries may be reduced and exchange in New York made normal. The unfavorable trade balance is indicated by the fact that in the last fiscal year Canada bought from the United States for domestic consumption goods to the value of $654,000,000 as against $290,000,000 purchased by the United States from Canada. At the close of the present fiscal year the balance in favor of the United States will be even more marked. The situation can be remedied by loans in the United States. Canada's credit has been maintained throughout the war. Although a borrowing country when the war broke out, such has been the patriotism of the people and the largely increased value of production, that the Dominion has been able to demonstrate its lending power in a remarkable way.

The $100,000,000 loan in New York in the summer was arranged after a conference with the United States Treasury Secretary McAdoo. Realizing the desirability of Canada establishing credits in the United States to meet adverse balances, he at the same time stated that the United States would "have to keep control over our own situation by determining each foreign offering on its own merits and with reference to the financial conditions prevailing at the time." Mr. McAdoo added it was important "that our commercial and financial relations with Canada shall be conserved in every reasonable way." The $100,000,000 transaction was intended for that purpose. Canada has not obtained advances from the United States through Liberty Loan funds, but we may take it for granted that should such a request become necessary and be made during the current year or later, the United States government will respond in view of the war financing we have done already and propose to do. At the same time, every effort must be made to conserve resources here, so that we may fully subscribe our own war loans.

Government's Taxation Policy

The use of the phrase "conscription of wealth" last year caused a certain uneasiness among those whose savings constitute a vital factor in the business and industrial life of the Dominion and are so essential to the credit and prosperity upon which our efforts in the continued prosecution of the war must largely depend. Sir Thomas White, finance minister, stated last year on behalf of the government that there need exist no apprehension on the part of the public that any action of a detrimental character will at any time be taken with respect to the savings of the Canadian public. On the contrary, it will be the policy of the government in the future, as in the past, to encourage in every way possible the exercise of the thrift and economy resulting in national savings which have enabled Canada to maintain her credit and improve her economic position during the war.

Any taxation to which it may be necessary for the government to resort from time to time will be in accordance with legitimate and established forms of taxation sanctioned by the tradition and experience of British self-governing communities. Last year saw the introduction of a federal income tax which cannot be described as onerous. The government is bearing in mind that Canada is a country inviting immigration and is not likely to become a country of heavy individual taxation. The Dominion's settled policy is that in providing its war expenditure, resort will not be had to taxation upon the farms, personal effects or incomes of those engaged in our great basic industry of agriculture.

The excess profits tax ended in December, 1917. The income tax will operate this year. During 1918, corporations will pay for 1917 whichever is the larger of the two taxes. If the war continues, the government will be compelled to seek new sources of taxation. In that event the income tax may be increased, the excess profits tax renewed and other measures adopted to increase revenue.

National Financing

Canadian national financing has been carried on satisfactorily. Public works expenditures have been greatly reduced. Our debt increase is due to war expenditures. The Dominion revenues for the seven months ended October last of the current fiscal year totalled $145,719,000, an increase of 11 per cent. over the corresponding period of the previous year. The gain was largely due to customs collections which changed from $75,000,000 to $91,763,000 in the seven months period of the two years respectively. Expenditures on capital account reached $144,213,352, of which $133,254,798 was due to the war, and $10,599,242 was on account of public works. In the previous year the war expenditure for the same period was $127,487,147, and the public works expenditure $13,540,236.

Debt and War Expenditure

On October 31st, 1917, the net debt of the Dominion was $948,236,372. In 1913, before the war commenced, the debt was only $314,000,000. Thus there has been an increase of 201 per cent. in the debt. It is almost entirely due to war. The total increased by $47,000,000 in October last. At that rate, we shall have in March next a debt of over $1,000,000,000. At 5 per cent. per annum, the annual interest will amount to $50,000,000. This sum, with a substantial amount added yearly for a sinking fund, can be met, provided strict economy be practised by governments, from the future revenue of the Dominion and by the people of Canada. In national finance, if debts can be funded, the practical question is that of payment of annual interest. But while this is so, the fact must not be overlooked that debt is debt, a financial obligation and burden upon the body politic, whether owed to investors at home or abroad. Thrift, economy and greater production are three of the ways to meet the interest on this large war debt.

Our war expenditures are approximately $1,000,000 daily. Up to July 20th, last, the war expenditure in Canada was $388,627,000 and elsewhere, $234,600,000, making the total to that date, $623,000,000. Since then, the war expenditures have been approximately $167,000,000, making a grand total of $790,000,000 to the end of 1917.

Trade and Commerce

Our total trade, excluding coin and bullion imports and exports, for the 12 months ended September, 1917, was $2,424,000,000, a record which compares with $1,091,000,000 for the same period of 1913. Thus, in four years our total trade has increased 122 per cent. In the same period, our imports changed from $683,000,000 to $1,004,000,000, a gain of 46 per cent. The exports increased from $408,000,000 to $1,419,000,000, a favorable change of 247 per cent. In these four years, an adverse trade balance of $300,000,000 has been converted into a favorable balance of $415,000,000. By March, it will probably be $500,000,000. The position of the trade balance at the end of September is clearly shown in the following figures:—

	Twelve months ended September 30th. (In millions of dollars.)				
Merchandise.	1913.	1914.	1915.	1916.	1917.
Imports	683	531	417	685	1,004
Exports	408	468	517	1,052	1,419
Unfavorable balance .	275	63	...	...	...
Favorable balance ...	...	...	100	367	415

The figures relating to imports and exports of coin and bullion for the 12 months ended 1914, were $61,000,000. For the three years ended September, 1915-1917, the total was $659,000,000. The striking change in these figures is due to the operation of the Bank of England's gold depository at Ottawa. Although it has been customary to include these figures in trade returns, the total trade figures are seriously disturbed by them in this instance and they should not be taken as an indication of the trade of Canada.

High Prices and Volume of Trade

Both high prices and volume of business account for the increase in the value of our trade. To-day, Canada is doing a foreign trade of greater monetary value and has a larger trade balance in her favor than was the case with the United States fifteen years ago. Taking the population of the United States as 100,000,000 and the population of Canada as 7,000,000, our exports were $135 per capita for the first eight months of the current fiscal year compared with $41.50 in the United States. Our favorable trade balance was $32.40 per capita against $21 in the United States in the same period last year. The reversal in the position of the Dominion from a debtor to a creditor nation is important as so much depends upon our balance of foreign trade. In periods during which Canada imports greatly in excess of her exports a debt is created to be liquidated by loans and interest charges to the detriment of domestic commerce. If the value of goods sold abroad exceeds imports, the difference accrues to the country in the shape of income. The stability of a country's prosperity is largely increased by the balance of its foreign trade. A favorable balance means prosperity, just as an adverse balance means, sooner or later, adversity. This rule may seem to be departed from in the case of Great Britain, whose imports greatly exceed exports, but the explanation is found in the fact that Britain is a creditor nation through her large investments in other countries, and receives payment of interest on these investments in goods to some extent. In the case of Canada it will be found that periods of progression and recession in business are coincident with the balance of foreign trade.

Exports of Canadian Products

Of the total exports of Canadian produce for the twelve months ended September, 1917, and valued at $1,381,000,000, manufactures accounted for nearly 50 per cent. or $632,000,000. This is a remarkable increase of $507,000,000 or 405 per cent. in two years. The exports of agricultural products have increased 214 per cent. in the same two years. Taking agricultural products and animal produce together, the total for the year ended September, 1917, was $584,000,000, an increase of 163 per cent. The following table shows at a glance how various groups of Canadian produce have contributed to our export trade during the past three years:—

Exports of Canadian Produce, Twelve Months Ended September,

	1915. $	1916. $	1917. $
The mine	55,428,149	77,436,746	80,598,252
The fisheries	21,362,398	23,274,772	24,993,156
The forest	47,241,070	53,952,950	52,989,554
Animal produce	86,179,377	111,331,332	157,415,287
Agricultural products.	136,573,766	396,455,537	427,927,335
Manufactures	125,099,041	361,381,419	632,536,835
Miscellaneous	3,035,284	8,107,248	5,057,557
	474,937,085	1,031,940,004	1,381,517,976

This large volume of trade is abnormal and not upon a permanent basis. It is unlikely to continue beyond the duration of the war. It accounts for the prevailing prosperity in Canada, and has placed the country upon a strong financial basis, but it is well to remember that the figures are inflated by passing conditions. With the conclusion of the war we must seek more permanent sources of foreign trade.

Trade With United Kingdom

With the great increase in trade, the general tendencies of its volume have not changed. For many years, the United States has had about 60 per cent. of our import trade, but the United Kingdom has been our best market. We have been borrowing money in the United Kingdom and selling most of our merchandise there, but we have been buying the greater part of our purchases in the United States. During the fiscal year ended March, 1917, of our total imports valued at $845,000,000, $664,000,000 came from the United States and only $107,000,000 from the United Kingdom. Britain's industries being mobilized chiefly for war purposes, her sales to Canada and exports generally have decreased. On the other hand, of total Canadian exports valued at $1,179,000,000, we sold to Great Britain $742,000,000 and to the United States $280,000,000. The imports and exports of Canadian produce from and to these countries for the past four fiscal years are shown at a glance in the following table:—

Imports.

Fiscal year.	United Kingdom.	United States.
1913-14	$132,070,000	$395,565,000
1914-15	90,157,000	296,632,000
1915-16	77,404,000	370,496,000
1916-17	107,096,000	664,219,000

Exports.

Fiscal year.	United Kingdom.	United States.
1913-14	$215,253,000	$163,372,000
1914-15	186,668,000	173,320,000
1915-16	451,852,000	201,106,000
1916-17	742,147,000	280,616,000

The United Kingdom is therefore by far our best customer but we buy most from the United States. The sentiment in favor of stronger trade relations between the United Kingdom and Canada is growing as the war proceeds. British firms will undoubtedly give far greater attention to the Canadian market after the war. The Canadian people are more favorable to the removal of obstacles to British trade in Canada. There are, for example, rules regarding the valuation of packages, valuation for duties, bonding and warehousing, dumping, etc., which should be modified. This can be done with strict regard to the interests of Canadian manufacturers and with advantage to British trade here as against that of foreign countries. Canada has been in the war long enough to determine that enemy trade shall have little place here when peace comes.

The great increase in the exports of our manufactures is an indication of our productive and export power. The factory production in Canada last year is estimated at $2,000,000,000. The exports of manufactures for the twelve months up to September, 1917, were $632,000,000. Our export trade during war time has not been obtained under competitive conditions. War orders have been placed here as fast as we could absorb and finance them. To some extent, this may continue when war ceases but, so far as one can see, peace orders are not likely to be placed as rapidly, in so large a volume or at such high prices as is the case now. The time will come when trading nations will have to compete keenly for their foreign business. New markets will not be opened and old ones extended by the magic of legislative action. Legislatures may be able to help pave the road to greater trade but the manufacturer must push himself along the commercial highway. The work, in the aggregate, of individual manufacturers throughout the Empire, and not legislation, will prove the most serious obstacle to the progress of enemy trade after the war.

Changes in Industrial Position

The Senate Committee appointed last year to enquire into these problems may be able to gather much information but it is largely upon the individual and collective work of manufacturers and traders that a substantial export business can be maintained.

When we were worrying a year ago as to what our munition plants would do as soon as shells were no longer needed, shipbuilding did not appear in the forecasts. Last year, with the end of the war still in the uncertain future, we commenced to pass through one of the readjustment periods so much discussed. Production in certain sizes of shells ceased and in others was reduced. The first stage of the passing of the munitions industry, which was the mainstay of industrial activity in Canada through 1915, 1916 and 1917, was marked by a minimum of disturbance, because of the initiation of shipbuilding enterprises. Many of our basic industries have been suffering from a shortage of labor and can readily absorb part of the surplus from the munition plants, with advantage to themselves and to the country at large. It is highly satisfactory that this first step in the transition from the shell-making business to the ordinary industrial activities of the country is being accomplished, and is likely to continue for some time, on a scale so gradual as to be almost imperceptible in its effects.

If present plans with respect to the building of ships, both wooden and steel, continue to expand, there is every prospect that the shell-making industry may be replaced in due time by another industry in which activity will continue long after the war ends. Its future, when peace comes, must depend largely on the efficiency which Canadian plants develop in the interval. Last year, we received orders from Great Britain for over $46,000,000 worth of ships. The passing of the munitions industry in Canada, however, will be delayed by the receipt of substantial orders by Canadian plants from the United States for shells.

Industrial concerns generally have placed themselves in a strong financial position during the past three years. Large earnings have been used to reduce obligations and to build up working capital, several companies, for example, having redeemed their outstanding bonds which were not due for several years.

Our agricultural production can be maintained largely by the proper selection and direction of immigration.

There has been waste of effort in the way we have settled the land. The settler has been expected to do pioneer work in Northern Ontario, for example, just as our settlers did 50 years ago. The time is approaching when the State will find that ready-made farms and all reasonable facilities is the quickest and cheapest way to make the new settler a substantial asset to the country. The home demand for food products is still great and as yet there is no evidence of the European demand becoming less urgent. It may be necessary for the buyers there to seek some readjustment of the terms upon which they have so far been supplied, and also to make new arrangements for obtaining credit. The importance of this aspect of the question becomes apparent upon comparing the volume of the exports of provisions (the bulk of which are to Great Britain), with that of former fiscal years. Our butter exports, for instance, have increased 917 per cent. in the past four years, exports of eggs, 7,099 per cent., of bacon, 475 per cent., of beef, 3,506 per cent., and of pork, 2,809 per cent. The exports of these five items in 1913 were valued at $39,000,000 and in 1917, $299,000,000.

Primary Production Last Year

With one arm Canada is supporting in the battlefield a worthy cause. With the other the Dominion is speeding its industrial plant to supply munitions, general equipment and supplies to Great Britain and the Allies. The business coming to Canada as a direct result of the war has acted as a pillar of strength to the Canadian industrial situation. That, taken in conjunction with the facts that liquidation of the position has been in evidence for over three years and that a large harvest of agricultural products was gathered and sold at high prices in 1916, with a good crop at good prices last year, obviously gives a wholesome appearance to the Canadian position.

Despite the scarcity of farm labor, production was large. The high prices for farm products and particularly the substantial fixed price for wheat is bringing a large sum to the country this season. Last year the value of our field crops for the first time exceeded $1,000,000,000. The field crops contributed $1,089,000,000 to the primary production of wealth in 1917. In 1914, the value of production from field crops, forests, mines and fisheries was $975,000,000. Last year, it had increased to $1,507,000,000.

The Grain Trade

The first effects of the war on the grain trade of this continent arose from the problems of ocean tonnage, marine insurance, and ocean freight rates. The export of wheat under these conditions became difficult. The British government created an agency in North America to purchase wheat for the Allies generally and Great Britain, France and Italy particularly. This wheat export company, with its vast financial resources and continuous orders for large quantities of grain, became dominant in the grain exchange markets of America, including Winnipeg. With rumors of speculation in wheat, the Winnipeg Grain Exchange investigated but found little illegitimate speculating. As prices continued to rise, however, facilities for future trading in wheat on the Wninipeg exchange were removed. While the action of our exchange did not commend itself at first to the other grain exchanges on the continent, the leading exchanges were shortly forced to take steps almost identical with those taken at Winnipeg.

Last year witnessed the beginning of drastic government regulation of the grain business. In the United States, a grain corporation was created, being the only buyer of wheat at the great terminal markets and the only distributor and seller of wheat from those markets to the American mills, the European Allies, and the neutral countries. Prices were fixed by government commission and future trading was prohibited. The mixing of grades of grain at the terminal markets was made impossible. The government took over the inspection of grain and standardized the grade. Thus the entire grain business of the United States was revolutionized.

In Canada, the government created a board of grain supervisors, its primary functions being (1) to regulate the price at which grain shall be bought and sold, (2) to regulate the distribution. Congress has guaranteed a minimum price of $2 per bushel for the wheat crop of 1918 and has given the president power, should he see fit, to impose a duty upon any wheat that might try to slip into the United States, and without right or title command the same guaranteed minimum. What effect this guaranteed minimum will have upon wheat-growing in Canada during the coming year, it is not possible to say.

Labor and Immigation Problems

Labor and immigration problems demand the serious attention of our authorities, whether we obtain few or many settlers. Time there is now to make plans for the important work of settlement. As Lord Shaughnessy has pointed out, farming should be made so profitable, by educational and financial aid, and the social conditions of rural life should be so improved, that thousands of men with natural inclinations that way will be attracted to agriculture and will succeed at it. Even when that is done, the great majority of the men will have to be provided for in other kinds of work.

Mining Industry

The mining industries of Canada were active throughout the year. The production of minerals in 1915 was valued at approximately $137,000,000. Last year, with higher prices for many of the metals, the value of the output was about $195,000,000. Exports of Canadian mining products for the fiscal year ended March, 1917, totalled $80,698,000 compared with $55,428,000 in 1915. Judging by the frequent indications of mineral wealth in the Dominion and by the records of various mining camps which have been well worked, the output of minerals is only in its beginning. Canada is the world's third largest producer of silver. That record has been accomplished with the assistance of practically one silver mining camp, Cobalt. The production of silver last year was approximately 30,000,000 ounces. This large total was assisted by recoveries from low-grade ores made financially practicable by the high price for silver. The price of 55 pence per ounce, at which silver sold in London in September, has been matched in only three months of the thirty-three past years. Those months were August, September and October, 1890, in one of which it sold at 54⅝ pence. Except for that brief movement, one must go back to April, 1884, to find the price as high as in 1917. One of the Cobalt mining companies sold in September last 200,000 ounces of silver on a basis to net the company $1.16 7/16 an ounce.

In 1916, only 5 per cent. of the raw material used in the manufacture of iron and steel in Canada was obtained from domestic sources. This means that 95 per cent. was imported. More partly manufactured materials such as iron and steel are now being imported, but our needs of copper, zinc, lead and other metals, were during 1917 met to a greater extent from our own resources. In British Columbia, refining plants are being established for handling an additional 70,000,000 pounds of copper annually. Some of these have already been installed, and similar developments are taking place with regard to other metals. Some of the metals, hitherto insignificant, have now become important items in our national balance sheet. In 1915 the zinc ore produced in Canada was valued at slightly more than $500,000, but in 1916 the value was $1,000,000 and last year it was still greater. The value of this industry to the Dominion, as in the case of nickel refining, will be greatly enhanced by treating the ore in Canada and by the development of the new processes already referred to. The output of copper in 1915 was 102,612,486 pounds as compared with 125,000,000 pounds last year, and the price in the former year was only 17¼ cents per pound, as compared with an average of 27 cents in 1916.

Future Business Conditions

No one can accurately forecast the trend of business conditions during the coming year, because every few months bring into the situation unforeseen factors, both adverse and favorable. The past year has demonstrated that we cannot depend upon the United States for our financial requirements during the war. That country has advanced to the Allies between April and the middle of December last, a period of about eight months, no less than $3,883,000,000. In addition, it is financing its own war expenditures which are increasing.

The past year has also demonstrated that Canada is prepared to finance itself during the war. This was clearly reflected in the remarkable over-subscription by $268,000,000 of the Victory War Loan of $150,000,000. For the first time, in November last, a large proportion of the population became holders of war bonds. One in ten of our people hold Victory bonds. When the next war loan is necessary, we shall probably be able to equal, if not better, that record. The habit of thrift was given an impetus by the Victory Loan, which was the first step of value towards the education of the people at large in buying government and war securities.

Now thrown upon our own financial resources, as the struggle proceeds we shall become more dependent generally upon our national resources. Just as our financial props, the London and New York markets, were removed by war conditions, so may other outside supports be gradually withdrawn by the exigencies of war. This probability is even now sufficiently outlined for immediate action by the proper authorities. National investigation and organization of resources as applied to war conditions is imperative work.

As an example, the coal problem may be cited. Mr. Arthur V. White, of Toronto, for many years has been drawing special attention to this matter. Emphasis has been given to the very serious distress that might, in any year, develop through fuel shortage. The lessons of former trying experiences of Canada in times of coal shortage, such as in 1902 and 1903, have been pointed out. The chief burden of Mr. White's efforts, however, has been to arouse the people of Canada to a due sense of the extreme seriousness of their fuel situation viewed in its broad national and international aspects. He has lost no opportunity of clearly holding this up as a prime national issue demanding prompt and energetic action on the part of the nation.

In 1910, referring to this subject, Mr. White used the following words which are equally true to-day: "Certainly the people of Canada are in better circumstances to maintain a supply of heat and power if their water-powers, including their full share of international water-powers, are reserved to themselves and not permitted to be exported, except upon terms and conditions which will conserve absolutely the present and future interests of the citizens of Canada. Not only would the water-powers of Canada provide, to a certain extent, a substitute for the coal supply of the United States as a means of furnishing light and heat and power, but control of these water-powers would secure a basis upon which negotiations for coal could be conducted in a possible day of need. Canada would be in a position to exchange, if need be, part of her electric energy for part of the coal supply of the United States. It is obvious, however, that if the United States interests should control both the coal and the water-powers, the situation of Canada would become exceedingly grave."

State Control and Regulation

As in other countries, so in Canada, the rapid growth of State control and regulation has been notable. The importation and sale of coal was placed in the hands of a fuel controller in October. A plan to establish effective control over all packing houses and their profits was announced by the government in November. A board of grain supervisors was appointed to fix the price of grain and to regulate distribution. Food control was established and a controller appointed to fix prices and to regulate supplies of newsprint and bookprint with a view to the requirements not only of Canada but also of the United States. The electric power situation in Ontario is under the jurisdiction of a government power controller. We have in addition the conscription of man power and the regulation of business profits.

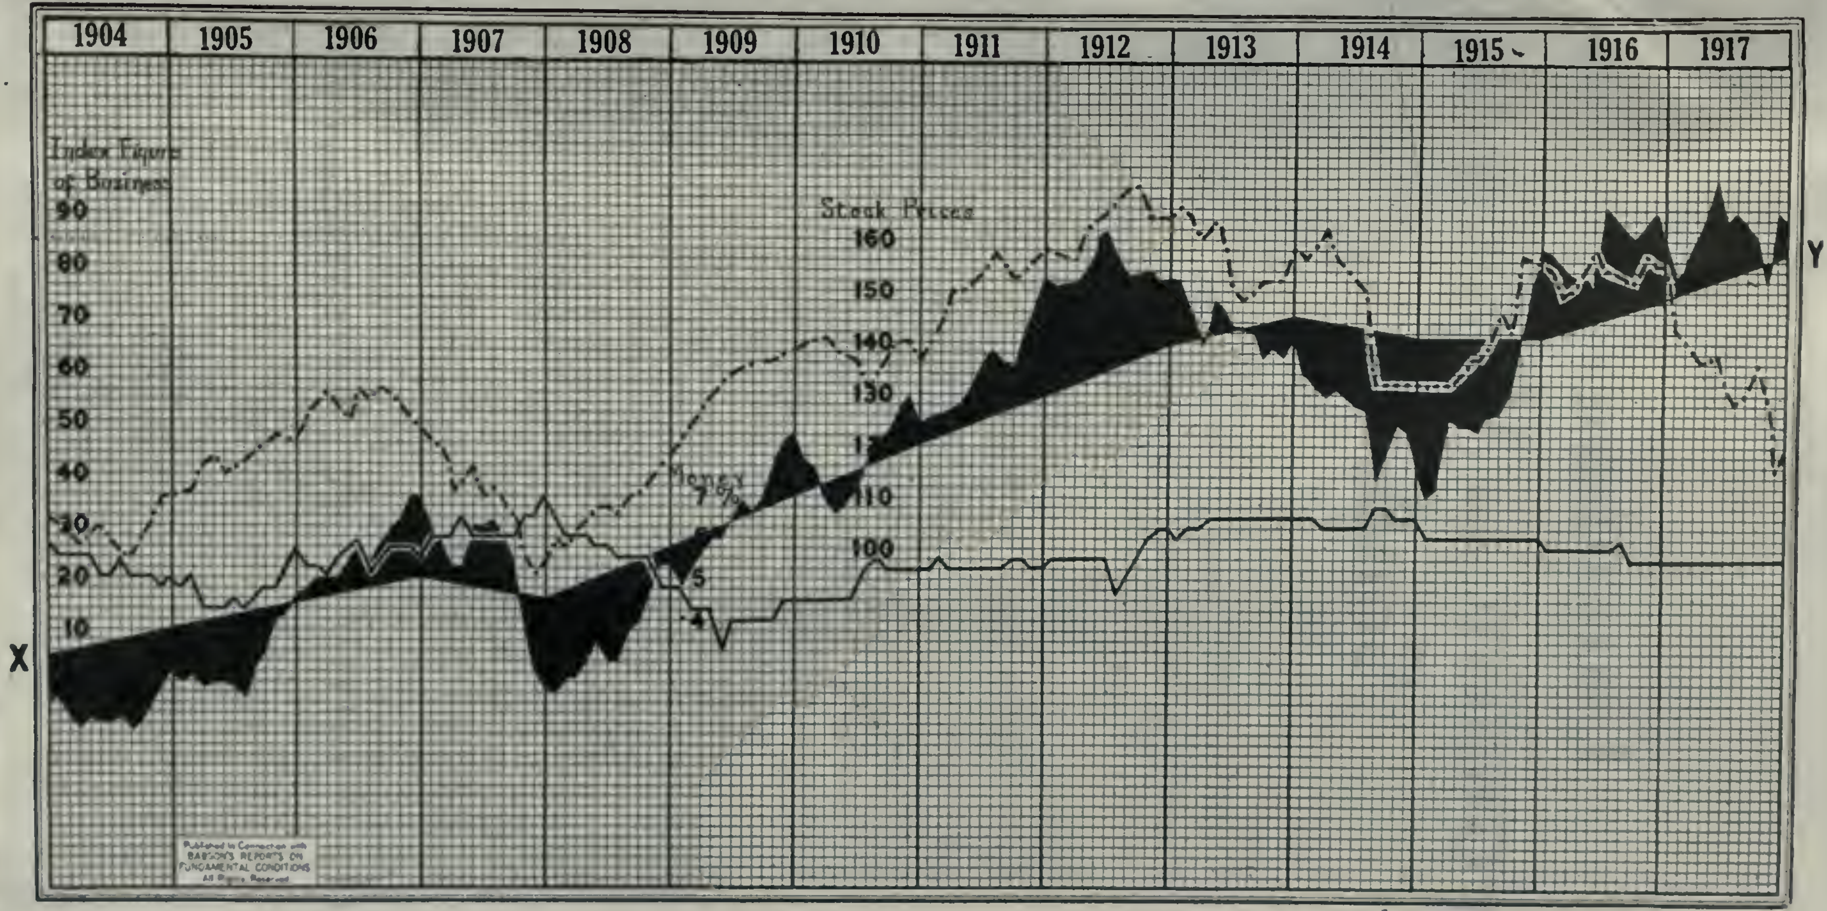
These are substantial indications of the growth of State control and regulation in the Dominion. It seems certain that this tendency will become more marked as the war progresses. Whether State control will remain an important factor in Canadian national life and business after the war is a matter on which opinions are divided. There is a general impression, however, that this factor will at least operate to a greater extent when peace comes than it did prior to the beginning of war.

Test of War

The test of war has proved Canada's mettle. Our achievements in production, war finance, banking, business and in other spheres for more than 3½ years have shown that Canada has been able to demonstrate capabilities which it was thought did not exist. With that knowledge of strength and with the Allied nations slowly crushing the Prussian menace, we may feel confident in our ability to co-operate actively in the prosecution of the war with a view to bringing it to a successful conclusion as speedily as possible. If we give practical recognition now to the vital necessity for organization, with peace as a foundation, we need not fear the problems which may then appear. With the continuance of the war and the growth of our national debt, financial problems will arise. These, in turn, will be counteracted among other things by the development of vast natural resources, increased production and the era of expansion which this country has yet to undergo.

Compositplot of Canadian Conditions, 1905-1917

(Compiled for *The Monetary Times* by Babson's Statistical Organization, Wellesley Hills, Mass.)



THE full black line represents callmoney rates in Montreal; the broken line shows increase of stock prices; the Compositplot is formed by a number of representative business subjects reduced to a common denominator. These include such subjects as bank clearings, building figures, stock prices, failures, railway earnings, commodity prices, etc. The X-Y line indicates as nearly as possible the normal line of growth in Canada.

The upward movement which recommenced at the first of 1916, has continued right through the past year and indicates that the period of great business activity has not yet ceased. However, the effect of increasing governmental restrictions and taxes, and the growing scarcity of capital are all tending to reduce the margin of profit. This has been reflected in the course of stock prices during 1917, which in November touched the lowest level seen for several years.

As in 1916, the course of business is going to depend very largely on when the war ends, although the longer the war continues the more governmental and financial restrictions will be felt in the industrial world. Certainly, neither Canada nor the United States will enjoy the tremendous profits realized during the first part of the war. At the present time, stock prices are selling below their real values and the stock line should show at least fair recovery during the early part of the year.

Canadian Government and Municipal Bonds

Canadian laws give the investor in Municipal Bonds the greatest possible protection.

The record of Canadian Municipal Securities is most satisfactory.

While safety is a predominant feature, the present interest return on Dominion Government, Provincial Government and high grade Municipal Bonds is unusually high, varying from

5½% to 6½%

BRITISH COLUMBIA

British Columbia

By
Honorable
H. C. BREWSTER,
Premier

FACED by the financial stress due to the war and by obligations which the new government found on taking office, the result of an increased public debt and railway bond guarantees, a policy of economy and retrenchment has been imperative. One of the first acts of the administration last year was the framing of a budget which would enable current expenditure to be met out of revenue. Financial returns to date show that this aim is being achieved, and without any loss in the efficiency of the services rendered. Steps are being taken to ensure that the larger revenue which it is necessary to derive from taxation shall be equitably apportioned between all classes of persons and property, to the end that the greater burden shall be justly borne by all in proportion to their strength. Energetic measures are under way to stimulate and encourage settlement of the land and a greatly augmented production.

The province, though feeling the strain of war conditions, in common with the other parts of the Empire, is in a sound and healthy state. Its government and people are meeting the heavy calls upon their men and means, in complete confidence that prudent management of provincial affairs will bring it safely through the crisis to a point where its unparalleled natural resources can be fully developed and utilized. Meanwhile, special demands made by the continuance of hostilities continue to afford an enlarged market for some of her products.

Agriculture has naturally suffered by the absence of so many men from the province on active service, and the greater scarcity of farm labor, but nevertheless the industry shows a satisfactory condition on the whole.

The total area under grain in 1917 was slightly greater than that of 1916 but unfavorable climatic conditions resulted in the decrease in yield, especially in oats, which is the chief grain crop of British Columbia. Fodder crops yielded about 12 per cent. more than in 1916. Field roots show an increase of nearly 60 per cent. in acreage over 1916, but the average yield was hardly up to the standard.

The fruit crop was probably the most satisfactory in the history of that industry, the yield being equal to that of last year, and the much higher prices giving a larger profit to the growers.

Dairying and the livestock industry were generally satisfactory.

The mining activity of the province has continued throughout the year. The preliminary estimate of the output for 1917 shows a small decrease as compared with 1916. The latter period, however, showed a large increase over the preceding annual periods, and the output for the past year was 36 per cent. greater than that of 1915 and 52 per cent. more than the figures for 1914.

The output of copper as a result of the war demands continued to be a feature of the mineral activity during the year, the total output being some 78,000,000 pounds, of a value of $21,250,000, this being an increase in value of $3,500,000 on the output of 1916. The production of silver also showed an increase in value to the extent of over one-quarter of a million dollars, the quantity being 3,000 ounces.

There were mined 24,000,000 pounds of lead and 30,000,000 pounds of zinc. The output of lode-gold was cut in half, chiefly due to the shutting down of the Rossland mines for several months. The aggregate value of metals produced in ten months covered by the preliminary estimates available at this writing is in the neighborhood of $31,000,000. In addition, there was something over $9,000,000 in value of coal, coke and miscellaneous mineral productions, making a total of about $40,000,000 for ten months as compared with an output of $42,290,462 in 1916.

The decrease in the production of coal is largely due to the shortage of labor and labor troubles, and this in turn was reflected in the greatly reduced output of coke ovens and the consequent hampering of smelting operations.

There has been a remarkable increase in the lumber production of British Columbia during the past year to the extent of at least one-third over the cut of 1916. The quantity of logs scaled during ten months of 1917 was greater than that during the whole of 1916 and practically one-third greater than during the whole of 1915. The war demands for aeroplane timber has resulted in the trebling of the cutting of spruce and the doubling of the cutting of larch since the beginning of 1917, while shipbuilding demands have resulted in a large increase in the production of Douglas fir.

For ten months ended October 31st, the quantity of timber of all varieties officially scaled amounted to 1,305,625,000 feet, board measure, as compared with 1,280,263,000 feet in 1916 and 1,017,683,000 feet in 1915.

The fisheries of the province have given a satisfactory production during the past year. There has been a large demand for the inferior qualities of fish and there is every reason to believe that this demand will continue and increase.

H. C. Brewster.

MANITOBA

Manitoba

By
Honorable
T. C. NORRIS,
Premier

MANITOBA has prospered exceedingly during the year 1917 and the coming of the New Year finds us not only still ready and willing but increasingly able to bear whatever burdens the fourth year of the war may bring.

Weather conditions during 1917 were not altogether ideal. Some districts reaped the largest crops on record, others reaped but little; the average over all the province was distinctly better than for the previous year. Increased prices tell the real tale of Manitoba's new prosperity. It is conservatively estimated that the cash return from all farm products will run from sixty to seventy-five million dollars more than in 1916.

Manitoba farmers, generally speaking, have never been in better condition to carry on. Mild weather throughout the greater part of October and November allowed for a record plowing in preparation for the spring. Stock is in excellent shape and farmers everywhere are heeding the call for intensified production. It is a notable fact that they are doing this quite as much because they realize it as a war duty as because of the profits that may accrue.

There has been a further and gratifying increase in mixed farming, for which Manitoba is so admirably adapted. The increase in dairying made it possible to export over 90 car-loads of creamery butter as against some 50 car-loads in 1916. Honey production was greatly increased in spite of a rather unfavorable season. There is certain to be at least an equal increase during the coming year in all these lines as the farmers are responding splendidly to every appeal for greater effort.

Out of her prosperity Manitoba is giving lavishly toward the winning of the war. Every appeal for funds has met with quick and generous response. Subscriptions to the Victory Loan constitute a record in which every citizen may take lasting pride. The people of this province are well settled into the collar in all war effort. There is a spirit of determination, of willingness to make sacrifices, of confidence in the certain outcome, in which there is no room for pessimism. Manitoba will carry on.

There is one other matter to which I would like to refer. That is the steadily increasing interest in education evinced by all classes of the population. This has been particularly apparent during the year just closed. I doubt if any other development could offer so much promise for the future of the prairie province.

T. C. Norris

ALBERTA

Alberta

By
Honorable
C. STEWART,
Premier

JUDGED by the usual standards of business economy, the general situation in Alberta is sound and encouraging. Crops have been a good average and have been carefully and successfully harvested. It is estimated that the principal field crops will yield 155,265,000 bushels, as compared with 135,748,000 for 1916. The total crop value for last year at prevailing prices was probably $170,000,000. In addition to this, the dairy industry of the province, through systematic grading and the consequent world marketing of cream and creamery butter, has shown during the last few years increases of over 30 per cent. annually. These increased returns from field and dairy are so much fresh capital added to the resources of the province, being immediately available for a more intensive development of agriculture and the livestock industry.

That this new capital is immediately available is witnessed by the general extension of farm improvements—buildings, fences and machinery—during the last few years. Through this, our farmers are better equipped to-day to meet the demand for increased production than they have ever been, and may be depended upon to do their duty by providing the necessary foodstuffs for the good of the Empire at large.

Good crops and high prices have caused a considerable demand for farm land. Values have risen from 25 per cent. to 75 per cent., according to locality. Notwithstanding labor shortage, due to the heavy enlistment of men from the rural districts as well as from the cities and towns, no great inconvenience has followed up to the present, for, owing to the co-operation of the railway and the government, help for seeding and harvesting has been secured from Eastern Canada and the United States. Splendid weather prevailed throughout the thrashing period and extended well up to the end of November, thus enabling more than the ordinary acreage of fall plowing to be done in preparation for the crop of 1918.

The prosperity of the farming communities is reflected in the towns and cities by increased wholesale business and bank clearances. Wholesalers report increases from 20 per cent. to 25 per cent., and their collections the best in the history of the province.

Alberta being essentially an agricultural province at the present time, these conditions are a source of great gratification to our people, and no doubt will be to Canada as a whole—taking into consideration the fact that Alberta forms a no small part of the granary to which the Empire at present looks as the source of their food supply.

Chas Stewart

SASKATCHEWAN

Saskatchewan

By
Honorable
W. M MARTIN,
Premier

TO say that remarkable progress has taken place in the province of Saskatchewan during recent years is to state a fact with which every one is familiar. There is no doubt, however, that the province to-day is in a better condition financially than ever before. True, the effects of the real estate boom have not altogether passed away, but speaking generally, the farmers on the plains and the merchants in the towns are in a better financial position to-day than at any previous time.

The crop of 1917, while not so large as in two former years, is on account of the prevailing high prices worth perhaps $125,000,000 more than in any previous year, and while the production of livestock is not so great as we hope to see in a very few years, it is worthy of note that there were in 1916, four times as many horses, two and one-half times as many cattle and four times as many hogs in the province as in 1906.

The people of the province have been very active in every patriotic effort; in fact there is no province in the Dominion which has done better work for everything in connection with the war than has the province of Saskatchewan. The Patriotic Fund has been self-sustaining. In 1916, the people here contributed a larger amount in cash per capita for Red Cross purposes than any province in Canada; as a matter of fact, one-quarter of the total cash contributions in Canada in 1916 to the Red Cross, came from the province of Saskatchewan, and there are to-day in the province one-third of all the organized branches of the Red Cross in Canada.

Saskatchewan is also proud of the fact that its allotted share of the Victory Loan was oversubscribed by several million dollars. This is the more remarkable when it is remembered that the contribution is made up almost altogether of small subscriptions, for we have no accumulation of wealth such as exists in the cities of the province of Ontario; and, moreover, our rural population, comparatively speaking, is much larger than that of any other province.

Our people are industrious and progressive. While we have in some portions of the province a mixed population, education and scientific methods are making rapid strides and we are looking forward with every confidence to a glorious future and the development of a people on the central plains of Canada, of which the whole Dominion and the British Empire will have every reason to be proud.

WmMartin

NOVA SCOTIA

Nova Scotia

By
Honorable
G. H. MURRAY,
Premier.

AFTER three years of war it cannot be said that industrial conditions in Nova Scotia have been adversely affected to a serious degree. In agriculture the season has been, on the whole, favorable. The hay crop was an average one, while fair yields of roots and potatoes are reported from an increased acreage. The pastures were excellent throughout the main portion of the season, and the dairying industry continues to make progress. Farmers are placing an increased value on the presence of livestock on the farm and more animals are being kept. The apple crop was larger, proportionately, than elsewhere in Canada and is being shipped principally to consumers in Ontario.

Our fishermen have had one of the best years in the history of the industry. Not only was the catch greater than that of 1916 but prices ruled higher. Both inshore and bank fishermen fared exceedingly well. The bait supply was regular and there was a gratifying decrease in the dog-fish pest.

In the lumber industry cutting was reduced owing to scarcity of labor and the lack of shipping. Prices ruled about the same as in the previous year but the export was under that of 1916.

The total output of coal was below the production of 1916 owing, principally, to the scarcity of tonnage and the lack of skilled labor. For these reasons shipments up the St. Lawrence declined somewhat heavily. The production of limestone was about equal to that of the previous year, while the output of gypsum was lower.

The manufacturers report a favorable year with a strong demand for all their products. In certain lines a sufficient supply of raw material was difficult to obtain regularly and a shortage of labor was also felt. In general, however, conditions are satisfactory owing to the variety of our resources and to the fact that there is no vital interdependence among our manufacturing industries. A large amount of war material was manufactured during the year.

It is realized that if we are to supply our share of the silver bullets that will ultimately win the war the business of the country has to be maintained. We must supply not only the men necessary to uphold our fighting strength at the front but also the supplies that will render their presence there effective. Nova Scotia endeavors to do her part in both directions.

G. H. Murray

PRINCE EDWARD ISLAND

Prince Edward Island

By
Honorable
A. E. ARSENAULT
Premier

THE foremost productive industry of Prince Edward Island is farming, upon which three-fourths of our people are mainly dependent for their livelihood. Mixed farming is carried on, of which the raising of field crops, the production of butter and cheese, of beef, pork, eggs and poultry are the main branches. Our farmers have had a good year, notwithstanding the drawbacks of a late spring and a scarcity of farm labor, the latter mainly due to the enlistment of about 3,000 of our young men in military service. Under the stimulus of high prices and patriotic motives approximately the usual acreage was under cultivation, resulting in a full average of production which commanded higher prices than ever before, making the field crop of 1917 the most valuable that was ever produced on the Island. The crop reports of the department of agriculture show that the season's production was valued at $12,390,600.

The urgency of high prices and the desire to increase production led to the cultivation of small plots in the city and towns of the province. The estimated value of these small-plot crops is from $85,000 to $90,000. Regretably, no statistics are at present available to show the quantities and values of beef, mutton, lamb, pork, poultry, eggs, butter, cheese potato, starch or farm, or farm and factory production. The season was a most favorable one for pasturage, but the reports show a slight falling off in the milk production. Eggs are known to have been produced in larger quantity and sold at higher prices than ever before, while poultry has fallen off in quantity, though commanding unprecedented prices. In consequence of the war, nearly all farm livestock has been enhanced in value, but statistics are wanting to show what the value produced, or the increase or decrease in numbers has been. An exception to the general rule is horses, for which this province has been famous in past years, but for which stationary or lower prices than in former years, now prevail, owing to the prevalence of motor cars diminishing the demand for horse flesh abroad.

Closely related to the farming industry and forming a branch of the livestock branch is the silver fox breeding industry. The food for the foxes comes from the farmers, the ranches are located on the farms and farmers are the most numerous class of shareholders in the many fox companies. Very few of the companies have paid any dividends since the first year of the war, but they have been adding to the number of their breeding animals and carrying on production all of the time. A rough estimate of the living foxes sold for breeding purposes during the year would be 50 pairs, at an average price of $750 per pair and ranging from $400 to $2,000 per pair, say, $37,500. It is thought that 1,500 pelts may be taken off and sold, a less quantity than last year but of decidedly better quality, owing to the weeding out of the inferior and less profitable animals, which took place last year. These, at present rising prices and the good demand existing, should realize an average of $300 each or $450,000. Prices obtained for last year's fox pelts ranged from $100 to $1,400 each, but averaged about $250. About 1,500 young silver foxes were born and reared during the season. A fair estimate of the value produced in our fox ranches in 1917 would be about $500,000.

The value of our dairy products, as set down in the census of 1911, was $1,639,475, and of animals sold and slaughtered, $2,411,252, making a total of $4,050,727. These classes of farm products do not vary greatly in quantity, from year to year, but prices have greatly advanced since 1911. In like manner, the value of poultry slaughtered in this province in the census year was $694,144. It is a moderate estimate that the classes of farm products named in this paragraph, at the present high price, would total $5,500,000 to $6,000,000.

We have, then, this summary of farm production in 1917: Value of field crops, $12,390,600; dairy products, eggs, poultry and animals sold and slaughtered, $6,000,000; production of fox ranches, $500,000; a grand total of $18,890,000.

Without including the foxes, this gives an average production of over $1,300 per farm for each of the 14,369 farms, many of which are small, in this province. In the last census year the average produced value per farm of field products, animals and their products, and fruits, was, in Prince Edward Island, $885; in New Brunswick, $584; and in Nova Scotia, $460. Two important improvements have contributed to the prosperity of our farmers this year and cannot fail to be of increasing utility and value in the future. The car ferry between Port Borden, Prince Edward Island and Cape Tormentine, N.B., has been recently put in operation by the Dominion government as a freight carrier and already has transported hundreds of carloads of farm products en route to the markets of the world. It will be of increasing value in the months to come when ordinary navigation will be obstructed by the ice. When this enterprise is made complete by the broadening of the gauge of the Prince Edward Island Railway to the continental standard, it will save the cost and delay of twice transhipping produce from cars to steamer, and from steamers to cars; it will give to Island producers and shippers the use of heated freight cars in winter, and of refrigerator cars in summer for perishable products, hitherto denied them; it will double the frequency of mails to and from the mainland; it is hoped to constantly guarantee constant daily steam communication across the straits during winter and summer, in place of the serious interruptions caused by the ice in past winters; it will largely facilitate tourist travel; it should enable manufacturing industries to be established and profitably maintained on this side of the straits where such were hitherto impossible owing to the want of dependable transport in winter; and finally, it will make Prince Edward Island an integral part of the Dominion in a sense that it has never been.

The provincial government, some years ago, constructed and equipped at Midgell a plant for the dredging and shipping of mussel mud, a most valuable fertilizer, of which there exists a very large deposit there. This fertilizing material is delivered at cost to the farmers, on the railway cars, or on scows for water transport, and is being shipped to many points covering two-thirds of the area of the province. The demand has, from the first, greatly exceeded the yearly increasing supply, and should the last weeks of the open season for this work prove favorable, the output for the past year will total 1,500 carloads.

It will be seen from the above recital why the farmers of Prince Edward Island are more prosperous than ever before and with a brighter outlook toward the future. They form so large a proportion of our population that their prosperity means a like measure to many others, especially the mercantile class. At the same time, the high cost of living, the cost of food and coal, is severely felt by those living in the towns and villages who are dependent upon salary or wages.

Next to farming, our fisheries constitute our most valuable asset, the production usually being from $1,000,000 to $1,200,000 yearly. Lobster fishing and canning usually makes up from one-half to two-thirds of this total. During 1917 the spring fishery of lobsters was not as productive as usual and fall fishing was permitted, with the result of a considerable additional catch, but still the total will come short of some previous years. A fair estimate of the value of our fisheries production this year would be about a million dollars.

Trade has been, and is, good; money fairly plentiful. There is no want of employment and it is felt on all sides that the province is on a solid basis of material prosperity.

A. E. Arsenault

ONTARIO

Ontario

By
Sir WILLIAM HEARST,
Premier

In three great branches of production, namely, agriculture, mining and lumbering, the past year has been one of more than ordinary activity in the province of Ontario. Early in the year fears were entertained that the agricultural yield would fall below the average, although every consideration of interest and patriotism required that production should be maintained at the highest possible standard. The farmer had to contend with the difficulty of obtaining labor, and with the scarcity of seed in certain varieties, as well as the increased cost in all. It was necessary, therefore, to take immediate steps to maintain our food production. This was done, first of all, through patriotic appeals to the farmers; secondly, by arranging for loans to them; thirdly, by securing and supplying seed; fourthly, by enlisting the support of labor from urban centres and distributing it among the farmers; and fifthly, by encouraging the use of traction machinery throughout the province. These efforts met with a most encouraging response. Not only was the food production of the province maintained unimpaired, in spite of adverse circumstances, but it was materially increased. We have under cultivation to-day in Ontario 300,000 more acres of land than we had during the years immediately preceding the war. Last year we were fortunate in having field crops much above the average and in some instances new records were established. Our reports indicate that the income of the farmers last year from these sources will be at least $50,000,000 better than in an ordinary year. It is very satisfactory to know that Ontario has an ample supply of fodder, thus assuring the prospects for the live stock and dairy industries. Altogether, our experience during the past year has vindicated the policy of stimulating farm production. I need not point out what this means to the general prosperity of the province, as well as to keeping down the cost of living, but I would earnestly commend it as a real contribution to the cause of liberty, and I emphasize that fact not merely as a source of satisfaction to Ontario but rather in the hope that it will be an incentive to the farmers of this province to maintain and increase our productiveness during the critical times that are still ahead of us.

I have indicated that our mining activity has been well maintained. In this respect the war has created a greater demand and has also imposed a special duty. Our production has been increased by the necessities of the Allies for nickel and copper and there has been an exceptional demand for silver. The result is that the production of these metals for the first nine months of 1917 was at least $2,000,000 in advance of the same period for 1916. The production of gold has been affected by the increased cost of mining without any compensating advantage in price and has consequently fallen slightly below its previous record. Figures that we have obtained for the first nine months of 1917 show that the mineral output of Ontario exceeded $43,000,000.

Another important industry is that of lumbering, which was considerably restricted by the early war conditions. We find now that this industry has largely recovered and is again in a satisfactory condition. The highest bids ever made for pine and pulpwood areas were realized last year and there is a good demand for the output of our mills at satisfactory prices.

Besides these three great sources of wealth, which I have specially mentioned because they come more directly within the sphere of the provincial government, we have our great manufacturing concerns which have been maintained up to the limit of available labor and raw material. Altogether, therefore, Ontario has done well during the past year and has every reason for hopefulness and confidence in the future. If there is a danger in our outlook, it is that in our prosperity we may forget the conditions that prevail elsewhere, and perhaps fail fully to realize how solemn and binding is our obligation to bear our full share of the burden of the great struggle through which the world is passing.

W. H. Hearst

QUEBEC

Quebec

By
Sir LOMER GOUIN
Premier.

NOTWITHSTANDING the industrial development of the province of Quebec, agriculture always remains its first and principal industry. The prosperity of the agricultural class is both the essential condition of general prosperity and an excellent barometer for indicating the economic situation. Thanks to the excessively high prices of food supplies, farmers are in the receipt of handsome incomes and enjoy an enviable ease. They are prosperous and they are equally patriotic. They know that with their scythes and with their ploughs they can be useful to the Allies and assist in the triumph of the great cause for which they fight. They recognize the importance of largely increased production and since last spring they have been resolutely at work. They have largely made up for the scarcity of labor by the persistency of their own work and thus succeeded in cultivating a much more considerable extent of land than ever before.

Unfortunately, this generous effort did not produce all the good results which were hoped for, and irreparable damages were caused to the crop by the torrential and continued rains. Nevertheless, the harvest was still very satisfactory, of which there can be no better proof than savings which the farmers have realized and which they have placed in the banks. I see another proof of their prosperity in the fact that the Canadian banks continue to open new branches in our country districts where they are certain to find any number of well-filled purses.

At this time, when complaints are made almost everywhere of the transportation service, the government for the purpose of facilitating the circulation of traffic, has vigorously continued the policy which it inaugurated several years ago, of improving our carriage roads. We have to-day several main arteries connecting the principal centres of the province, and in the course of last season we have been able to finish the Quebec-Montreal road and have commenced a new route between Three Rivers, Grand Mere and Shawinigan. We are now studying several projects which we shall endeavor to carry out in the near future. In short, we are now supplying the province with a system of roads which may well be its pride and which already contributes to its prosperity.

The industrial future of the province of Quebec is mainly to be found in its forests and its water powers. Nowhere else are there such favorable opportunities for the manufacture of paper. We possess these incalculable riches—motive power and raw material in abundance. Since 1910, the date at which we prohibited the export of wood cut on the Crown domain, several companies have established workshops here which are to-day extremely important, and the consumption of pulpwood manufactured into pulp or paper in this province has increased from 340,000 tons in 1910 to nearly 1,000,000 tons in 1916. The pulp and paper industry is now enjoying with us an era of prosperity. In order to enable this industry to develop itself and to manufacture cheaply by utilizing its water powers under the best possible conditions, the government has constructed important dams at the head of two of our principal rivers to regulate the flow of the waters. These dams will soon be finished, when that of the St. Maurice will be the largest reservoir in the world, its capacity being about four times that of the famous Assouan Dam in Egypt, which was built by the Imperial government several years ago at the cost of many millions of dollars.

In short, the possibilities of our province are as immense as its resources and when we recall the fact that Quebec forms but a part of Canada, we may surely be permitted to be optimistic and in no sense to despair of our country's future, notwithstanding the dark days through which we have been passing since 1914, and despite the large amount of the national debt.

Lomer Gouin

NEW BRUNSWICK

New Brunswick

By
Honorable
W. E. FOSTER,
Premier

THE spirit of determination which prompted our people and public men in the past to build for the future, to establish good government, and to struggle for democratic principles, animates their descendants to-day, when between twenty and thirty thousand men from New Brunswick have or are taking a part in the struggle in France and Flanders to preserve the liberty of the world and to oppose the aggression of the German foe and his allies.

With such an army at the front, in training or inscribed on the roll of honor as killed, wounded or missing, New Brunswick has every right to expect to share in the fullest measure in that development which will come after the war, particularly when, as we hope and expect, in the flood of immigration from the Old Country there will be plans for the settlement of soldiers upon the land, which should be one of the greatest features of the work of reconstruction. The government of New Brunswick, while grappling with present-day problems, is looking ahead to these larger possibilities in the future.

Through the energy of our forefathers we found that railway development in our province had been amply provided for. There is no portion of the Dominion better served by railways, so far as mileage goes at least, than the province of New Brunswick. We are looking forward to the day when the branch lines, which are so important in developing the interior of the country, which mean so much to the transcontinental roads, will be considered as part of a greater railway system. It is of the greatest importance that the people in those sections affected by the many branch lines in this province should at as early a date as possible have some assurance for the continuance of the system.

Definite objectives have been marked for the agricultural department. Increase in livestock, encouragement of wheat growing, institution of creameries, getting in touch with wider markets, all form part of the programme of the minister of agriculture. Agricultural education is receiving more attention in the school system.

Establishments of such plants as the new mill of the Bathurst Lumber Company and of Frasers Limited, at Edmundston, goes to show that the future holds much for one of New Brunswick's greatest industries though lumber operators and manufacturers are handicapped just now by the shortage of shipping. To supply this tonnage shrinkage should be one of our first duties and there are already indications that public-spirited men are awake to this need with the formation of several ship-building companies and keels already laid at St. John, once queen of shipbuilding ports.

Total trade of $220,000,000 passing through St. John in one year indicates the great importance of that city as one of the gateways of the Empire. Back of this gateway lies a rich and fertile province, resources yet undeveloped, possibilities yet untouched.

W. E. Foster

War Finance and the Allies' Economy

Canada and United States Must be Economical Assets of the Allied Nations—Japan's Army, Asia's Labour—The Relation of the Kaiser to High Prices—How the Tonnage Question Will Stand This Year

By JOHN STUART THOMSON.

IN my article in *The Monetary Times* Annual, January, 1916, I urged that the most economical assistance to the Allied cause that the United States could render, would be to loan Great Britain even up to the sum of twenty billions. *The Monetary Times* wrote an editorial calling attention to my plan, in issue of April 13th, 1917, I beg to repeat my suggestion. It is the quickest and most economical method of winning the war. Britain can then finance Japan, and probably some of the neutrals and bring the war to a prompt and victorious close.

I stated that this plan would be more effective than taking millions of mechanics from the industrial field and sending them over the Atlantic as combatants to choke the Commissariat's present difficulties. I saw no military or economical objection to sending 700,000 United States troops to the French front. I have no Pacificism "up my sleeve" in my economical advice. If it is finally necessary that every one of us shall go over, I believe in thoroughly crushing the Teuton. All my own family near and far are in the war, either in the Anzac, Canadian, British or American armies, and I am "fighting with my mouth" as Lord Roberts said, which the army doctors tell me is the best way, after my campaigns for civilization in the tropics.

Help of Economists.

Cool economists must and will win this war. Britain will require during twelve months, 12,000,000 tons of food, and 20,000,000 tons of munitions and supplies from the western side of the Atlantic. Italy also will need supplies. I quote Lord Northcliffe, who writes in New York World, October 2nd, 1917: "Sir Joseph Maclay, the British controller of shipping, has stated that unless the United States constructs 6,000,000 tons of shipping annually (not one-third of this is apparent), the military efforts of the United States will be crippled from the start. Nothing less will supply a million over-sea troops against the growing submarine menace."

The British controller of shipping's report reads as follows:—"It is reasonable to expect that Germany will destroy by next spring (Mrach, 1918), 200 vessels more than can be built in the meantime. The question the United States must face is whether it will be possible for her to send any substantial force to France next spring without such a drain on the world's shipping as will subtract just that much from the fighting strength of the other allies, as her own forces will add. However large and powerful the army which the United States trains during the winter, it may be rendered absolutely useless as an addition to the fighting forces, if there are no ships to transport it, except at the cost of stopping the flow of vital necessities to the present armies."

Assets of Allies.

It is essential that Britain shall maintain the United States and Canada as economical assets of the allies. How the United States is measuring up as a foil to Germany is illustrated as follows. In 1914 the United States exported $27,000,000 of dyes, drugs and chemicals. In 1917 the figures were $185,000,000. In explosives the comparative figures were six millions against one billion. In tonnage the United States should one year hence have four or five million against two million in 1914. In gas and hydro-electric power, the jump forward is similar. he United States budget for 1917 is as follows:—

Dr.

Loan, allies	$7,000,000,000
Army	6,890,019,661
Navy	1,605,098,458
Aviation	694,000,000
Shipping	1,040,000,000
Draft	8,658,413
Food control	173,846,400
Insurance	176,250,000
Emergency fund to President	100,000,000

Cr.

Bond bill, April 24	$7,000,000,000
Bond bill, September 24	8,538,000,000
War revenue bill	2,500,000,000
Regular revenue	1,333,000,000
Total	$19,371,000,000

After waiting patiently for several years to see if the allied strategy could conquer the submarine (I myself offered plans of a sleuth-sub) or win a military decision, I finally came out in *The MonetaryTimes* of November 10th, 1916; *The Monetary Times* Annual of 1917, and in the press generally in the United States, and urged that the policy of attrition be now cast away and a military decision be sought, through the use of Japan's army and Asia's labor. The long period of operation of the deadly submarine has brought costs up so high that the matter must be solved, if the opinion of the peoples in democratic countries is considered an asset.

Germany's Bankruptcy.

When Germany reached a debt of 23 billions (which she has already) she reached bankruptcy, repudiation, and a financial state whose foundation is hollow paper. When through high costs, Germany shall force the United States to create a debt of 40 billions, she will accomplish the practical strangulation of the allies' war banker, and manager of war supplies. Let us by wise councils defeat her every effort.

The sought for economical Moses, who will find quick victory for the allies, will, I believe, throw back to production much of the skilled labor and superintendence now in United States camps and restore it to the allies supply market. The British made this error in the first year of the war. Millions of United States troops cannot be supplied overseas in addition to the allied armies now there. Italy's military representative also expressed this view on page 1, magazine section of New York Times, September 23rd, 1917.

Safe Pacific Seas.

I urge the use of the safe Pacific sea lanes; the prompt use of Japan's and Italy's full army force; the abundant use of Asia's cheap labor, to maintain Russia; with these forces to crack Austria, and encourage Hungary, Bohemia, Poland and neutrals to join the allies, as more of the world's policemen against the German rioter, pirate and brigand.

Here is the proof that the allies must listen to an economical Moses to save the cause. Silver to-day is over par. That means that the Kaiser is making the allies pay over one dollar for a piece of silver that costs 50 cents when the war began. Coke has risen from $1.50 to $14.50 in the general market. Cotton was 6 cents a pound in 1914; to-day it is 25 cents. Shipping tonnage was $50 a ton in 1914; today it is $300, although the United States government holds the Steel Trust down to $65 a ton for government steel.

Increase of Costs.

Coal, bread, 'aeroplanes, shoes, sugar, powder, medical supplies, skilled and unskilled labor,—everything is rolling up, and bringing the allies' war banker (the United States) day by day nearer to financial distress and social discontent, for it must be remembered that the United States is fighting for no territorial gains. A debt of 40 billions in the United States will spell economical disease, and therefore revenge for the Kaiser. Criticism is growing. Hear the New York World (an administration organ), September 22nd, 1917: "No wonder American consumers watch with misgiving some of the prices which the government, influenced by producers and handlers, is putting upon indispensable commodities. To-day on all sides, war earnings are furnishing a precarious basis for over-capitalization and pyramiding of profits. The burden thereby placed upon the shoulders of American consumers grows heavier at an alarming rate. The country cannot carry it. Prosperity will presently crumple beneath it." I will interrupt here to say, that price fixing by the government will not be a success, if the government does not also become distributor to a sufficient degree to control the unpatriotic distributor, who is generally a foreigner, in the large cities.

The submarine has been the factor in this troubled economical and strategical history. But the United States and Canada must be economically saved before Britain's problem is looked into. During Britain's wars, you must maintain the dollar before you worry about the value of the pound sterling. It will never do to let the Kaiser ruin our war bankers on the western side of the Atlantic. If the United States is saved through a more efficient and economical policy, then Britain can be economically saved after the war, because she can throw the German colonies into the credit side of the scale, and again become the world's leading banker.

The captured German colonies must be retained by Britain, every acre of them. The United States will not tolerate Imperial German Colonies hereafter, or the Imperial pirate flag in any port. Moreover, Britain, France, Japan and the United States must see that Russia remains our economical and political ally, or economical hardship and another war with Teutonic Europe are ahead of all of us. Only the use of Japan's army can bring this about, as we in Canada and the United States are fully cognizant of the fact that the Germanic north-Russians have betrayed us and are surrendering balances for the German's use on the peace table. The political and economical fight now is not only to conquer Germany. It is to hold Asia and Russia to our side after the war, until solvency, rehabilitation and permanent peace are achieved.

After the War.

Britain's economical troubles will come after the war. I mean as a publicist in the United States to support her retention of the German colonies, so as to save her post-war finance on behalf of the allies, to whom she has loaned, or will loan, 10 billion dollars.

The leadership required during the battles of post-war taxation will call for genius and honesty not inferior to any military leadership that the war has evolved, in the respect that it is easier to spend money than to find it. The massing of classes will involve more men than any army has held. One of the most conspicuous problems is the taxing of war profits and income, in which the United States is less drastic than any of the allies. Britain's tax is much higher. The people will seek a leadership, which will change both of these policies. Britain will require more capital to develop the German colonies. Therefore, she will reduce taxation of profits and incomes. America will find that she must provide larger sinking funds for her debt, and she will be compelled to tax profits, skilled labor and incomes more heavily than she is doing. However, I realize that both the United States and Canada are developing countries, and capital must be encouraged to remain here. American politics have always surrendered to excessive skilled-labor charges. Britain has controlled her labor charges, sometimes rather too drastically.

Steps Taken by United States.

The nationalization of industries, transportation, raw material, coal and food supply, and special munitions in the United States is one of the most remarkable economic features of our finance. Tens of thousands of cars have been saved in the daily shortage. There was a 22 per cent. gain in tonnage carried per car, and only 3 per cent. increase in equipment. Freight is routed by the National Railway Director to the most available terminal. Formerly the individual railways fought for the long haul; or the shipper, seeking cheaper steamship rates, demanded a popular port. The steamships, too, preferred a popular passenger port. Both together glutted one terminal and left a score of others not fully employed.

In various industries, including shipbuilding, the government sometimes guarantees cost, plus 10 per cent. This is an old system of elastic construction contract instituted by the Erie Railroad decades ago. The government under this plan practically guarantees no strikes. But private finance in the United States is unalterably opposed to government ownership during peace times, the activities of politicians being hated and distrusted more than in any other nation. The de-nationalization of many industries will, therefore, ensue in the United States with the close of the war. If the large shipping tonnage is de-nationalized, then America must provide a subsidy to enable private ship owners to equalize the cheaper wages paid in Japan, and other countries.

Government's Achievements.

The United States government has cut private charters on the Atlantic down to $5.75 a deadweight ton a month, from a figure twice to three times that price. The United States also assesses on excess profits. Soft coal has been cut from $6 and more, to $2 at the mine; copper from 30 to 23. Its pre-war price was 13. The United States government is endeavoring to mobilize in the Federal Reserve Bank (which answers to the Bank of England and the Bank of France) the nation's three billions of gold, and 12 billions of banking resources. Only half of these resources are at present nationalized.

The United States government has therefore mobilized 262,000 miles of railway; has practically nationalized 27,000 factories; has nationalized advertising and most of the periodical press; has partially nationalized public opinion through the censor; has nationalized women's and boys' clubs; has diverted women to men's work, and therefore suspended during the war the domestic and cultural life of the nation, to that extent. The United States government, at date of writing this article, is the only government to-day which is running the war as a party war, its war cabinet representing only the Democratic party. To strengthen the conduct of the war, I am one of the publicists who recommend the admission of all parties on a pro-rata basis to the war cabinet, as in Britain, Canada, France, etc.

As to Tonnage Losses.

The concealment of tonnage losses is an error, for we must maintain confidence in our home countries, which are democratic, and fight better when they know the truth and all the truth, no matter how harsh it may be. The Anglo-Saxon has hated doctored, concealed and colored opinion since the days of Runnymeade. The Kaiser knows all about the tonnage losses. If he did not know, the tonnage price would tell that archfiend, namely, $50 per ton as the pre-war rate; $250 per ton, present charges. This means that Britain has lost over one-quarter of her tonnage, and she is not building over 2½ million tons a year. Japan, too, knows Britain's losses. President Matsumura, of the Osaka Shosen Kaisha (Steamship Company), recently wrote in the Japan Advertiser: "Great Britain has lost nearly 45 per cent. of her tonnage, i.e., nearly 9,000,000." I disagree with this, as these figures are excessive. Lord Northcliffe in the New York World of October 2nd, 1917, says: "The whole system of publishing the figures of submarine sinkings, is misleading. I do not believe that any substantial progress has been made in stopping the submarine depredations."

Britain is a glorious fighter martially and economically. She will close the war as a leader in merchant marine, and with the most economical opportunities for maritime rehabilitation. She will have two new great allied maritime assistants. The tonnage record will probably be as follows:—

	1914.	Close of war (1918.)
Britain	22,000,000	17,000,000
America	5,000,000	7,500,000
Japan	2,000,000	4,000,000
Germany	5,000,000	2,000,000

More than navies or armies, economy wins in war and peace, and that is why in *The Monetary Times* of December 3rd, 1915, I eagerly supported Britain's suggested blockade of neutrals. Had it been put in then, the war would have been over now.

(Continued on page 29)

Prices During and After the War

Inflation has Appeared in Every Belligerent Country—National Debt Increases—Present Purchasing Power and High Prices May Remain for Years After War

By W. W. SWANSON.

THE price problem is of surpassing importance to the industrial and economic life of the nation. Men of affairs are prone to become impatient in dealing with what they consider theoretical discussion, but theory must be understood if right practice in business life is to be pursued. Theory, in fact, is little more than analysis of right practice; and at this juncture of events there is no question that stands so much in need of searching analysis as price movements and their effects upon present and future industry. The present article will deal briefly with the probable tendency of prices at the close of the war, and the bearing of this tendency upon the economic interests of labor and capital in Canada.

A nation's place in the world of trade depends upon its efficiency in production, whether in manufacturing or agriculture. Efficiency, in its simplest terms, is a matter of costs, and cost study has been made the basis, therefore, of every thorough-going plan for securing the highest production at the lowest possible expense. It must not be thought, however, that high money costs are the deciding factor in industrial supremacy. The United States and Canada pay as high wages to labor as are given anywhere in the world; and yet the Republic has rapidly pushed its way to the forefront in commerce and trade, and Canada, considering its resources in materials, labor and capital, has made scarcely less progress. Not high wages, but high production in proportion to capital expenditures, is the key to supremacy in commercial competition in the open markets of the world.

Canadian and American workmen have been efficient, more than holding their own with poorly-paid labor in Europe because of their high standard of living. It has been proved beyond peradventure, both before and during the war, that the labor force which is permitted to retain its resiliency through right working conditions, both of hours and wages, gives the most effective results. We are not so much concerned here, however, with hours of labor as with wages, because it is upon the latter that the standard of living depends. Unfortunately, in several of the leading financial journals on this continent, veiled threats have been made against labor to the effect that wages will be deeply cut into at the close of the present struggle.

The whole argument is based upon problematical conditions in international trade after the war, in which it is asserted that cut-throat competition will be in evidence as never before. Wages, it is said, must fall sharply to permit Canadian and American producers to hold their own against Europe. In our judgment there could not be a more short-sighted policy—unless prices also decline in the same proportion. This, we propose to show, will not likely be the case. High prices for food, raw materials and manufactured products will obtain at the close of hostilities; and in that event labor must receive a fair reward in terms not only of money, but of actual income, if the Dominion and the United States hope to achieve material success.

And Canada ought to be in a position to pay decent wages as well as to increase its economic efficiency, when Armageddon shall have become history. At the outbreak of war this country was indebted to Europe and the United States to the extent of not less than 3,000 million dollars. The national debt will have been increased by the end of 1917 by 1,000 millions. Nevertheless, it must not be forgotten that the Dominion, as far as the national debt is concerned, is much better off than at the outbreak of hostilities. High prices for agricultural and manufactured products always favor the debtor, whether the debtor be an individual or a nation. Now, it is a matter of undisputed fact that commodity prices have advanced at least 90 per cent. since August, 1914; and, therefore, with half the effort previously required in production—the only way in which any debt can be paid—our obligations to Europe and the United States may be met. We shall be worse off, economically, only with a serious decline in prices after the war; and to the writer materially lower prices are not in sight for a decade at least.

Turning for a moment to the present labor situation on this continent, it is clear that the apparently high price of labor is deceptive. The mass of the people, while fortunately fully employed, are having a struggle to make ends meet. This aspect of the problem is dealt with by a leading New York brokerage concern as follows:—

"It is because we think that prices have about reached the breaking point, and because we think that high prices are paralyzing industry, and the high cost of living is maddening the poor people and making them turbulent and rebellious that we are ceasing to be bullish, even on most of the industrial stocks. The strain on our industrial and economic mechanism is becoming so great that some important part will almost surely give way soon. . . . Millions of workers are eating less food because they cannot buy the usual quantities. Real estate in our greatest centres has become almost unsaleable. Something, besides the war, is going to happen soon. This is no time to be poor."

The statement is over-pessimistic, but it contains much of truth. Food prices, in particular, have gone skyrocketting to such an extent that the pinch of living is felt severely by the working classes. It is time to consider whether the shibboleth, "supply and demand," will longer suffice as an answer to those who ask an explanation for the underlying causes of the present prices of food. Certainly, during a war where the entire material and spiritual forces of the nation must be mobilized for victory, price manipulation of food supplies can have no moral or social sanction. Men may play in the stock market if they wish, but not with human life.

High Prices and Stagnant Industries.

On the other hand, let no one imagine that high prices have brought sudden wealth to all Canadian manufacturers, or even to a large proportion of them, popular conceptions to the contrary notwithstanding. High prices have paralyzed many peace industries. The building trades are stagnant, railway construction is dead. The sensational decline in railway securities, even of seasoned stocks and bonds of such premier roads as the Pennsylvania, proves conclusively that capital has suffered no less than labor because of the war. The high cost of materials, increased wages, and the enormously enhanced cost of rolling stock have laid a crushing burden upon carriers, both in the United States as well as in Canada. Rates and prices must, therefore, advance, as far as the peace industries are concerned, before such enterprises can be completely rehabilitated and yield a profit to those whose energy and capital have been invested in them. Simply stated, a sharp and sudden decline in prices would lay industry and commerce prostrate. Price changes must be adjusted over a comparatively long period if economic stability is to be maintained and regained.

Turning directly to an examination of probable price movements, it is evident that no clear-cut conclusion can be drawn without discovering the fundamental factors that operate in the field of prices at the present time. What are those factors? The loss of a considerable percentage of the world's shipping is one factor in the situation. And yet, the loss of world tonnage—taking replacements into consideration—is scarcely more than 10 per cent. up to the present time. It should not be overlooked that ocean transportation, in any event, has no bearing upon the price of food products in America, so far as imports are concerned.

On the other hand, it is certainly not so much the decrease in tonnage as the shortage of food suppllies among the European belligerents that has raised the prices of agricultural products in Canada. Land transportation has had little or no effect on prices, as the railroads of this continent are more efficient than ever. Taking one year with another, the world's output of cereals and foods has been as great since 1914 as in the years immediately preceding the struggle. True, some 25,000,000 men are in the field engaged in destruction instead of production, and supported by an army of workers in the home countries of at least equal size. Nevertheless, the unusual energy of labor, both of men and women, in the factories and fields of the belligerent countries has more than made good the wastage of labor caused by the war; and capitalistic enterprises are keyed up in efficiency as never before. Obviously, the usual reasons advanced by way of explanation of high prices will not do. We must look elsewhere for the cause.

Small Fortune for a Hat.

The clue that leads out of the labyrinth is found in the fact that prices were advancing from 1895 to 1914; and that every previous great war, under which similar conditions obtained, marked advancing prices. These conditions were an increase in the circulating media of the nations at war and an increase in the volume of credit in general. The fundamental fact in the period, 1905-1914, was the enormous increase in the world's output of gold—an increase that outdistanced demand, and led to a lowering of the value of the yellow metal. In the Napoleonic struggle prices rose in all European countries, including the United Kingdom, because of large issues of paper money, not immediately convertible into gold.

Every student of history will recall the bizarre prices that marked economic life in the American Revolutionary War, when the printing presses of the colonies were set busy turning out continental notes. As these notes depreciated in value prices shot skyward, and the phrase, "Not worth a continental," became proverbial. Both in the Northern States, as well as in the Confederacy, "promises to pay" were freely emitted, with resultant chaotic conditions, due to high prices, in trade and commerce. If one lives in Mexico to-day, it costs a small fortune in paper money, to buy so much as a hat.

The leading index numbers of the world—including those of the London Statist, Bradstreet's, the United States department of labor, and that of our own deparment of labor—indicate, although constructed after different principles and of different lists of commodities, a surprising uniformity in their interpretation of general price movements. This goes to show that the operative factors are not merely local, but world-wide in their scope.

Inflation is Everywhere.

Inflation has appeared without exception in every belligerent country, due not only to the increased volume of currency in circulation, but to enormously augmented debts. The total gold money in circulation in the forty principal countries of the world, for example, increased from $3,827,000,000 in 1895 to $8,560,000,000 in July, 1917. Silver coinage and circulation showed a slight decrease, there being $3,825,000,000 in circulation in 1895 as against $2,600,000,000 in 1917. Silver will be, probably, more largely used as currency after the war—but that is another story. "Uncovered paper" increased from $2,178,000,000 in 1895 to $13,500,000,000 in July, 1917. It is important to observe that the total volume of money in circulation for the leading forty countries of the world increased from 1895 to 1917 150 per cent., while the world's population, during the same time, increased only 13 per cent.

There has been a great increase in the issue of "uncovered paper" during the four years of the war. In 1913 paper money issues stood at $2,799,000,000, while by July, 1917, they amounted to $13,500,000,000. The increase in gold and silver circulation has been small since the outbreak of hostilities, while paper money issues have increased 400 per cent.; and the end is not yet. Paper issues among the leading European belligerents in the years 1913 and 1917 are given in the following table:—

Country.	1913.	1917.
United Kingdom	$115,000,000	$ 660,000,000
Germany	262,000,000	1,613,000,000
France	326,000,000	2,900,000,000
Italy	182,000,000	661,000,000
Russia	....	4,285,000,000

It is quite easily seen from a study of this table why, among other things, the mark has fallen in Germany and the rouble in in Russia.

Increase of National Debts.

But inflation has come about from another direction and has been occasioned by an even more potent force—the increase of national debts among all belligerents. The total debts of the world for successive periods from 1895 to 1917 are seen in the following table:—

Year.	Amount.
1895	$ 28,750,000,000
1913	43,840,000,000
1915	56,904,000,000
1916	96,950,000,000
1917 (July)	106,000,000,000

It has been estimated by the Mechanics' and Metals' Bank, of New York, recently that for every month the war lasts not less than $5,000,000,000 is added to the debt of the world, and that by August, 1918, the total world debt will stand at the staggering sum of $150,000,000,000. It may be recalled, in this connection, that interest upon the debt of the world in August, 1914, required for its payment $2,000,000,000, while by the end of 1917 for that purpose not less than $5,000,000,000 will be needed.

It is evident that bonds and stocks, created for war purposes, pass current among financial concerns as cash; but, much more, they may be pledged at the banks as a basis for loans against which cheques may be drawn. We are unable to believe that this volume of actual and potential purchasing power will be materially diminished within a decade after the close of the war; hence, high prices will prevail.

Coal Problem of Canada Demands National Action

A Solution of a Vital National and International Question Outlined — Our Natural Resources Not Inexhaustible — Canada's Present Dependence Upon the United States for Coal — The Dominion Possesses Independent Fuel Resources Which Must Be Developed

By ARTHUR V. WHITE

SO much has been said, drawn from seemingly authoritative sources, respecting the "unbounded extent of the natural resources of Canada," that it is little wonder the popular view is entertained that Canada's resources are practically unlimited, and perpetual prosperity only waits upon their fuller development. For Canadians, however, to hold and be governed by such a view is to live in a "fool's paradise."

Little more than a decade ago, a large majority of the people of the United States believed that the natural resources of their country were unbounded, and that there was hardly any limit to material progress based upon their development. Even in that country, however, there were many who did not share these views, and through their efforts special investigation was made respecting the actual conditions of the natural resources of the nation.

Natural Resources of United States Exhaustible

The President called for a conference of the governors, leading officials and experts of all the States of the Union.

Addressing the conference on the 13th of May, 1908, the President stated:—

> "This nation began with the belief that its landed possessions were illimitable and capable of supporting all the people who might care to make our country their home; but already the limit of unsettled land is in sight, and, indeed, but little land fitted for agriculture now remains unoccupied save what can be reclaimed by irrigation and drainage. . . We began with an unapproachable heritage of forests; more than half of the timber is gone. We began with coal fields more extensive than those of any other nation and with iron ores regarded as inexhaustible, and many experts now declare that the end of both iron and coal is in sight. . . . The enormous stores of minerals, oil and gas are largely gone. . . . Our natural waterways are not gone, but they have been so injured by neglect and by the division of responsibility and utter lack of system in dealing with them that there is less navigation on them now than there was fifty yars ago. Finally, we began with soils of unexampled fertility, and we have so impoverished them by injudicious use and by failing to check erosion that their crop-producing power is diminishing instead of increasing. In a word, we have thoughtlessly, and to a large degree, unnecessarily, diminished the resources upon which not only our prosperity, but the prosperity of our children and our children's children must always depend."

Canada's Natural Resources also Exhaustible

No country possesses, within its own borders, more varied and extensive resources than the United States, yet it is now recognized that many of these are within measurable distance of exhaustion. This fact was so clearly demonstrated that prompt action by the trustees of the nation became imperative. So far as one can judge, natural resources from the 49th parallel to the Gulf of Mexico are better situated, geographically, and must always be more desirable than those from the 49th parallel to the Arctic ocean; thus, by reason of situation. Canada's usable natural resources are in variety and extent less than those of the United States.

Those who have observed the rapid disappearance of many of the natural resources of Canada and the present alarming rates at which some are being consumed, realize that the situation, as a whole, is one of great gravity. Consequently, true conservation in Canada is as great, if not greater, a necessity than in the United States.

On the 6th of December, 1917, at the annual meeting of the Bank of Montreal, its president, referring in hopeful terms to Canada, said: "Our natural resources are unbounded and our credit is irreproachable."

Now, as a matter of fact, our resources are not unbounded, and our very credit is involved in the use we are making, and shall make, of the resources at our disposal. Many of these, as just stated, at present rates of depletion, and without proper methods of conservation being rigidly applied, are within measurable distance of exhaustion. By way of illustration: There was a time—and not so very long ago either—when the buffalo and the carrier pigeon existed in the United States and Canada in countless millions. To-day they are gone.

Resources Must be Wisely Used and Conserved

It is true that some resources, such as minerals—perhaps more especially coal, oil and gas—if used, must in time, necessarily become exhausted. On the other hand, such resources as the soil, plant growth, waterways and ground waters, may be conserved and transmitted to posterity unimpaired, or at least unabused, just as a good husbandman passes on his farm in an improved condition to that in which he received it. The policies advocated by the Commission of Conservation of Canada have aimed at passing on to succeeding generations in an improved condition the heritage of the natural resources of this country.

By intelligent and thrifty use, the natural resources of Canada may beneficently serve the needs of a large population. If, however, Canadians become really dependent upon necessary commodities supplied them by other countries, they must be prepared to accept the circumstances in which they may suddenly find themselves if the supply of such commodities is cut off. Such circumstances will be aggravated by any abuse of our assets.

Coal Scarcity and Coercion

There is, apart from food, raiment and shelter, perhaps no single commodity which has been found so necessary for the maintenance of life and for the carrying on of commerce and transportation as fuel—chiefly coal. During the past few months the public interest has been keenly aroused respecting the nation's fuel supply and increasing dependence upon hydro-electric energy. The present war conditions are going to drive home to Canadians as never before the tremendous gravity of their position with respect to fuel.

Countries like Norway and Sweden, Denmark, Holland and Switzerland—countries, indeed, which are neutral—are practically dependent upon the warring nations for coal, and have found themselves seriously curtailed in obtaining this commodity. They have been forced to recognize the momentous fact that the countries which possess coal are able, absolutely, to dictate the terms upon which coal will be supplied to others.

Norway and Sweden are short of coal. Both Great Britain and Germany have released coal to these countries in exchange for food. Britain has required European neutral ships calling for coal to bring cargoes of foodstuffs or other desirable commodities. Holland must get its coal from Germany, which consents to supply it only in return for large quantities of food, especially vegetables and meat raised on Dutch soil. Holland at present has open to her no other market in which to secure coal. From Switzerland, Germany demands cash at the rate of 40,000,000 francs monthly for nine months at five per cent. in return for a monthly delivery of 200,000 tons of coal; and within the last month it has been reported that Germany has liberated some hundreds of agents instructed to secure control of the hydro-electric resources in Switzerland, so that, with these under their direction, and in control, also, of the coal supply, Germany would more completely dominate Switzerland. One of the chief factors which has existed in connection with Alsace-Lorraine has been that Germany wishes to maintain this outlet for her coal and in return derive from these areas the supply of iron which she herself lacks. The necessities of life—not the precious metals—are the real arbiters of exchange.

Portion of Canada Dependent Upon United States for Coal

Now, a very large portion of Canada—and for this one may hold in mind much of the populated territory extending, say, from Quebec to Winnipeg—has become increasingly dependent for its fuel supply upon the coal fields of the United States, and absolutely dependent upon that country for its annual supply of some 4,500,000 tons of anthracite coal.

In addition to the use of imported anthracite coal for fuel for heating and domestic purposes, large quantities of bituminous coal—some 10,000,000 to 14,000,000 tons—are also imported from the United States, largely for power purposes.

The known anthracite coal fields of the United States are within measurable distance of exhaustion. Upon this point there seems little difference of opinion. The time during which the supply will last, at rates of consumption existent prior to the war, is placed at about one hundred years. Doubtless, in the near future, the United States will feel compelled to conserve this valuable commodity, and the exportation of it may be largely restricted, if not entirely cut off.

There are available scores of examples, arising out of the present war conditions, where the United States has found it necessary to place stringent embargoes upon natural and manufactured products.

If Canada is to be in a position to command special consideration under possible restricted conditions, she must realize the value of her own resources and have them strictly under national control in order that she may be enabled to deal on a basis of *quid pro quo*. When the commodities of commerce are exchanged there must, of course, be a substantial basis for barter. When Germany demanded gold from Switzerland she offered to exchange coal. Suppose that the United States, in the conduct of her commerce, concluded that it was in the general interest of her citizens only to *barter* coal for certain commodities which she specially required, what desirable commodities has Canada to barter?

Canada an Exporter of Electrical Energy

Other than the products of her agricultural lands, mines and forests, there are certain resources in Canada of unique and special value. One of these is the hydro-electric energy which may be developed from Canada's waters, including her equity in international waters. At the present time the United States is importing from Canada about 275,000 horsepower years of electrical energy.* Many factors, of course, enter into the determination of the equivalent of this electrical power in terms of anthracite coal. Electric power has great advantage for many purposes over steam. Speaking in round figures, and taking cognizance of some of these special factors, the electrical power now imported by the United States would be the equivalent of probably not less than 3,000,000 tons of coal—it may be a quantity substantially greater.

Canada has been richly endowed with water-powers, although those serviceable from the standpoint of present economic development should be carefully conserved so that they may be used in the general public interest.

Any estimate for the water-powers of Canada must be presented and considered with a due appreciation of its limitations. The following table representatively sets forth the water-power situation in Canada. By no means may **all the** water-powers be economically developed:—

Estimate of Water-Power Resources of Canada **

Province.	Total possible horse-power.	Developed horse-power.
Ontario	5,800,000	760,000
Quebec	6,000,000	640,000
Nova Scotia	100,000	26,000
New Brunswick	300,000	15,000
Prince Edward Island	3,000	500
Manitoba	....	76,000
Saskatchewan	3,500,000	33,000
Alberta		
North-West Territories...		
British Columbia	3,000,000	250,000
Yukon	100,000	12,700
Total	18.803.000	1.813.200

Men far-sighted in the fields of industry and finance have foreseen the extent to which present and future generations will be increasingly dependent upon power, whether it be steam or hydro-electric.

Concentration of Control

In the United States, for many years past, special efforts have been made to concentrate control of water-powers. Most of the water-powers which are more readily capable of economic development in Canada, as well as in the United States, either have been already developed or are privately controlled. Concentration of ownership is a noticeable feature of this control. It has been authoritatively published that in the United States, in 1913, about 6,300,000 horse-power was controlled by ten groups of interests. This concentration is still going on. Owing both to provincial and federal legislation, it has not been possible for interests so readily to obtain control of water-powers in Canada. Efforts, however, are continually being made to secure the rights for such desirable water-powers as are yet vested in the Crown. The efforts made by the powerful financial interests behind the Long Sault Development Company to obtain control of the almost unequalled power rights at the Long Sault rapids, on the St. Lawrence River, are still in mind.†

Power Monopoly

The public cannot be too well informed respecting the extent to which they may be compelled to pay tribute to those concentrating hydro-electric powers, by reason of the control which such interests have over the distribution and supply of electrical energy.

In this connection no words are better fitted to express what is going on than those of Mr. Gifford Pinchot when he states:—

> "And whoever dominates power, dominates all industry. Have you ever seen a few drops of oil scattered on the water, spreading until they formed a continuous film, which put an end at once to all agitation of the surface? The time for us to agitate this question is now, before the separate circles of centralized control spread into the uniform, unbroken, nation-wide covering of a single gigantic trust. There will be little chance for mere agitation after that. No man at all familiar with the situation can doubt that the time for effective protest is very short. If we do not use it to protect ourselves now we may be very sure that the trust will give hereafter small consideration to the welfare of the average citizen when in conflict with its own."

Respecting the water-powers of the United States and the attempt to create a monopoly of same, Mr. Roosevelt, in accurate, prophetic terms, as true for Canada as the United States, has stated that:—

> "The people of this country are threatened by a monopoly far more powerful, because in far closer touch with their domestic and industrial life, than anything known to our experience. A single generation will see the exhaustion of our natural resources of oil and gas, and such a rise in the price of coal as will make the price of electrically transmitted water-power a controlling factor in transportation, in manufacturing, and in household lighting and heating. Our water-power alone, if fully developed and wisely used, is probably sufficient for our present transportation, industrial, municipal and domestic needs. Most of it is undeveloped, and is still in National or State control. To give away without con-

---

*Respecting various phases of this subject, consult an article by Arthur V. White on the "Exportation of Electricity," which appeared in the *University Magazine*, October, 1910, pages 460 *et seq.* Consult, also, *Toronto World*, March 18th, 1912; also, "Exportation of Electricity—An International Problem: Relation of a Possible Coal Embargo by United States to a Curtailment or Stoppage of Canada's Electric Power," by Arthur V. White, in *The Monetary Times* of January 5th, 1917, pages 21 *et seq.* Consult, also, *Annual Reports of Commission of Conservation*, Ottawa.

**See *Conservation*, Ottawa, for December, 1917.

†For a review of the water-power situation on the St. Lawrence River, consult report of recent annual meeting of the Commission of Conservation, Canada; also *Electrical News*, Toronto, 15th December, 1917.

ditions this, one of the greatest of our resources, would be an act of folly. If we are guilty of it, our children will be forced to pay an annual return upon a capitalization based upon the highest prices which 'the traffic will bear.' They will find themselves face to face with powerful interests entrenched behind the doctrine of 'vested rights' and strengthened by every defence which money can buy and the ingenuity of able corporation lawyers can devise. Long before that time they may, and very probably will, have become a consolidated interest, dictating the terms upon which the citizen can conduct his business or earn his livelihood, and not amenable to the wholesome check of local opinion."

This prophecy of the ex-President is daily in process of fulfilment. In view of all the exigencies facing her—both national and international—Canada cannot afford to have great water-powers, like those of her boundary waters, pass into the hands of powerful private interests, but must retain full command of all the nation's resources.

Common Aims and Aspirations a Great Asset

Nothing is further from the thought of the writer than to suggest that it is, or that it would become, the arbitrary desire of the United States to deprive Canada of the coal which at present is so necessary to life in Canada. It is important, however, to take cognizance of the fact that a nation, pressed by the demands of its own people, may be compelled, under certain conditions, to deprive other nations—in part, at least—of even the necessaries of life until the needs of its own citizens are met. No country can be expected to send out of its confines that which is essential to the very existence of its own people.

Canada is, indeed, exceedingly fortunate in being neighbor to a country whose national aims and sympathies are so akin to its own. Our great Ally to the south has extended to Canada specially generous consideration in the present coal shortage. Dr. H. A. Garfield, United States Fuel Controller, has announced that recognition will be given to Canada's needs for coal as though she were one of the States of the Union.

No one can contemplate the hearty efforts made to relieve the suffering begotten of the Halifax catastrophe without placing the greatest value upon the readiness of our neighbors to co-operate where assistance is really needed. In response to the distress of Halifax the governor of Massachusetts telegraphed assuringly: "The people of the Commonwealth of Massachusetts are ready to answer any call that may be made upon us. Massachusetts stands ready to go the limit in rendering every assistance you may be in need of." The governor of Maine telegraphed: "Any help Maine can give is yours," while many others sent corresponding messages. Sentiments like these, however, cannot better be summed up than in the inspiring message sent by President Wilson to:—

> "His Excellency the Governor-General of Canada:
>
> "In presence of the awful disaster at Halifax the people of the United States offer to their noble brethren of the Dominion their heartfelt sympathy and grief, as is fitting at this time, when to the ties of kinship and community of speech and of material interests are added the strong bonds of union in the common cause of devotion to the supreme duties of national existence."

Obviously, so long as such sentiments govern men's actions, the people living on the North American continent cannot be deprived of that which is essential to their existence; nevertheless, with the growing scarcity of coal, the United States, no matter what her goodwill or desire for exchange of commodities, may not be able to cope with the prevailing need, and Canadians must be prepared to help themselves by the development of their own fuel resources in a way that they have never done before. There is no doubt that if this effort is made, the United States, in the spirit and disposition recently manifested in the statements above quoted, will see that Canada is fairly dealt with. We should not, however, trespass unduly upon friendly accommodation.

Coal Resources of Canada

The alternative open to Canada, and it is this to which special attention is directed, is to develop, and that as rapidly as possible, her own fuel and power resources, and by co-ordination of transportation and other cognate agencies to provide for the early annual distribution, including reasonable reserves, of fuel to all communities in the Dominion. In some respects it is more important to move coal and have it adequately stored and distributed throughout Canada than it is to move the grain out of the country.

The coal fields of Canada may conveniently be divided into four main divisions:—

(1) The bituminous coal fields of Nova Scotia and New Brunswick.

(2) The lignites of Manitoba and Saskatchewan, and the lignites, sub-bituminous and anthracite coal fields of Alberta and the eastern Rocky Mountain region.

(3) The semi-anthracite and bituminous fields of Vancouver Island, Queen Charlotte Island and the interior of British Columbia, and the lignites of Yukon.

(4) The low-grade bituminous and lignites of the Arctic-Mackenzie basin.

The coal areas and estimated quantities for the different provinces are shown in the following table. There should, of course, for practical consideration, be a substantial reduction made in these quantities, due to waste in mining operations:—

Estimated Coal Resources of Canada*

PROVINCE	Area of Coal Lands Square miles.	Semi-Anthracite Tons.	Bituminous Tons.	Sub-Bituminous Tons.	Lignite Tons.
Nova Scotia .	521		10,691,000,000		
N. Brunswick	121		166,000,000		
Ontario	10				27,500,000
Manitoba	48				176,000 000
Saskatche'an	13,406				65,793 000,000
Alberta	81,878	845,900,000	217,918,000,000(*a*)	932,053,000,000	29,095,000,000
Brit. C'l'mbia	6,045		77,923,000,000 *a*)		5,715,500,000(*b*)
Yukon	2,840		275,000,000(*a*)		5,159,000,000(*b*)
Northwest Territories	300				5,280,000,000
Arctic Islands	6,000		6,600,000,000		
Tota	111,169	845,900,000	313,573,000,000	932,053,000,000	111,256,000,000

(*a*) Includes some anthracite coal. (*b*) Includes some sub-bituminous coal.

*Consult "Coal Situation in Canada" by W. J. Dick, in *Transactions of the Canadian Mining Institute*, 1916.

Canada's coal and coke production in 1916 was as follows*:—

	1916 Short tons
Nova Scotia	6,912,140
New Brunswick	143,450
Saskatchewan	281,300
Alberta	4,559,054
British Columbia	2,584,061
Yukon	3,300
Total	14,483,395
Distribution of coal production:	
Sold for consumption in Canada	10,701,530

Peat Resources of Canada

Respecting the peat bogs of Canada, Dr. Eugene Haanel, Director of Mines, Canada, from time to time, has strongly urged the necessity of developing our peat resources, and at the recent annual meeting of the Commission of Conservation of Canada he gave an able, forceful and serious address upon this subject which the people of Canada cannot too carefully consider. Dr. Haanel again affirmed the commercial and economic practicability of peat production. Throughout

---

*From figures issued by Mr. John McLeish, B.A., F.S.S., Chief of Division of Mineral Resources and Statistics, Ottawa.

Canada there have already been discovered areas of peat bog estimated to aggregate 37,000 square miles. According to a broad estimate by Dr. Haanel, and assuming an average depth of bog of six feet, this area corresponds to over 28,000,000,000 tons of peat, having a fuel value equivalent to over 16,000,000,000 tons of good coal. Manitoba, Ontario, Quebec and New Brunswick have peat bog areas aggregating 12,000 square miles.

Canada Must Bestir Herself Respecting Her Fuel Resources

Anthracite coal as a fuel is a luxury. Within the last twenty-five years many farmers and citizens especially in outlying communities who formerly utilized only wood, now use anthracite coal. It became easier and more convenient for the farmer to haul his coal from the railroad siding than to go into the bush and chop his year's supply of wood Now, what opinion would be expressed respecting a farmer who allowed his family to suffer great privation, through failure in the supply of anthracite coal, if within ready access was a wood lot from which ample fuel supply could be obtained? Obviously, the opinion expressed would be that the farmer had better take up his axe and make available such fuel supply as was within his reach and control.

This illustration is not offered by way of suggestion that farmers and many others may find full relief by resorting again to "the woodpile." It is, however, applicable to Canada at large. A great portion of this Dominion, like the farmer, has become dependent upon others for coal. If this supply is gradually, but seriously, curtailed, or even finally cut off, there is no more excuse for Canada remaining unsupplied with fuel than for the farmer in the case of our illustration. We have already cited the extensive character of the undeveloped fuel resources of this Dominion.

Canada, even though she may regret being deprived of the luxury of clean-burning anthracite coal or the easily-delivered bituminous coal, must, nevertheless, arouse herself and bestow the necessary intelligent labor upon her own fuel resources in order to make them available for her national needs. Absolutely, no time is to be lost. Governments—both federal and provincial—in Canada should utilize to the fullest possible extent the results of research and investigations already made, the knowledge of which is possessed by able members of a number of government departments.

It is not the intention again to emphasize the distress which is at present upon the country in connection with its *annual* fuel supply from the United States. Canada has had repeated warnings in this respect. The lessons of the coal shortage of 1902-1903 were soon forgotten. The indications in 1915 were unmistakable for a shortage in 1916; conditions in 1916 indicated a worse state of affairs for 1917; and present conditions forebode increasing distress for 1918. Let it be appreciated that Canadians need never expect to have electrical energy replace coal and other fuel for heating purposes except to a relatively limited extent.

The present coal shortage, with its perplexing difficulties, is being ably and conscientiously dealt with by Canada's Fuel Controller, Mr. C. A. Magrath. Hence it is more the purpose of this statement to draw attention to the fuel and power situation in its broad national and international issues.

Fuel Problem Can be Solved

Once a broad national policy has been determined, financial and other assistance should be promptly rendered to enable sane and businesslike development of Canada's lignite, peat and other fuel resources for the benefit of the nation, to be carried out by competent technical officials entrusted with this great and honorable responsibility.

There is no need to start again learning the A. B. C. of this fuel problem. Officials of the government of Canada, such as those in the Geological Survey, Department of Mines, the Commission of Conservation and other organizations, have knowledge of existing conditions and of practical means by which much of the stress may be relieved. To carry out these measures of relief and to place Canada in a reasonably independent position with respect to fuel will take time; but there is no doubt that if matters are dealt with in a broad, statesmanlike manner, and the necessary encouragement of financial and other assistance is given to those who are competent to handle same, Canada will, at a minimum of effort and expense, be relieved of a menace with respect to her coal supply which threatens not only her economic life, but the physical life and well-being of a large proportion of her citizens.

Statements to the effect that we cannot afford to produce and transport our peat or our lignites, because the cost may be even a few dollars more a ton than imported coal, are simply ridiculous. Anthracite coal, due to war conditions, is now practically unobtainable in the countries of Western Europe. In the winter of 1916, for such coal as was available, France was paying about $40 per ton and Italy $50 per ton. Recent reports from these countries state that coal at present is selling at $60 per ton. Now, Canada imports annually about four and one-half million tons of anthracite from the United States. Suppose that circumstances prevailed for a year such as would make the citizens of Canada willing to pay even a fraction of the advance in European countries —say, $10 advance—this would amount to about $50,000,000. When one thinks in such terms of increased *yearly* outlay, surely a million dollars, or even a few millions of dollars if necessary, placed at the disposal of technical officers, assisted by men of sound commercial judgment, in order to get our own lignite and peat resources under national development, constitutes so intrinsically small a sum in comparison to the results as to be practically unworthy of debate.

From the foregoing we clearly perceive that there is no need for Canada, with her vast resources of fuel and water-power, to go cold or to have her industries throttled by reason of power shortage; but Canada may have a sore trial in both these respects unless every possible effort is speedily made to deal with the fuel and power situation in a comprehensive manner.

Shall it weakly be said, "There is a lion in the way"? or, with confidence in Him to Whom belongs "the earth and the fullness thereof," and Who ever guides men in all honest effort, will Canadians forthwith assume the responsibility of this fuel question and unite in energetic action until this great national problem is satisfactorily solved?

Number of Subscribers to Canadian, British and other War Loans

The number of subscribers to the Canadian war loans was as follows:—

Date.	Amount.	Number of subscribers.
November, 1915	$100,000,000	24,862
September, 1916	100,000,000	34,526
March, 1917	150,000,000	40,800
November, 1917	150,000,000	802,000

The number of subscribers to various war loans has increased in most countries, with the exception of Germany, as the war has progressed. The following table shows the results of Great Britain's three large war loans in this respect:—

Date.	Amount.	Number of subscribers.
November, 1914	£ 350,000,000	100,000
July, 1915	616,000,000	1,100,000
February, 1917	1,000,312,950	8,000,000

Of the total number of subscribers to the third British war loan, 5,911,000 represented purchases of war saving certificates.

The number of subscribers to the second Liberty Loan of $3,000,000,000 (oversubscribed by $1,617,532,300) was 9,400,000.

The number of subscribers to the first Liberty Loan of the United States of $2,000,000,000 was 4,000,000.

The subscribers to German war loans have been as follow:—

Date.	Amount.	Number of subscribers.
September, 1914	$1,115,000,000	1,177,235
March, 1915	2,264,000,000	2,694,063
September, 1915	3,025,000,000	3,966,418
March, 1916	2,678,000,000	5,279,645
September, 1916	2,674,000,000	3,810,696

Primary Production in Canada Last Year Was Valued at $1,507,687,000.

THE value of production in Canada last year from field crops, forests, mines and fisheries was approximately $1,507,687,000, compared with $1,275,734,812 in 1916.

The details for the past four years are printed at the foot of the page, the figures for 1917 being necessarily to some extent estimates of government departments and of *The Monetary Times*, but well within the mark, as previous estimates have shown:—

Production Doubled Since 1908.

The value of production (field crops, mines, fisheries and forest products) each year since 1908 has been as follows:—

	Total.
1908	$ 703,590,000
1909	816,274,000
1910	701,085,000
1911	901,709,000
1912	909,358,000
1913	907,311,000
1914	975,379,706
1915	1,071,219,879
1916	1,275,734,812
1917	1,507,687,000

For the first time on record, in 1917 the value of Canada's field crops was over $1,000,000,000. This was due to the high prices prevailing. Details are printed in the crop stories in the Industrial Section of this issue.

Mineral Prices High.

The prices of many mineral products during 1917 were higher—in some cases much higher—than the ruling prices of 1916. In other instances lower prices prevailed, as in the case of zinc. Taking all features into consideration, Mr. John McLeish, chief of division of mineral resources and statistics, Ottawa, tells *The Monetary Times* that the total value of the mineral production during 1917, compiled on the the usual basis, will probably exceed, and possibly considerably exceed the value for 1916. This will not mean, necessarily, however, that the mining industry has contributed more to our national requirements. In fact, we might have a smaller production of every important product, which, on account of higher prices would in the aggregate show an increased value of production in the mining industry. There was probably not any very great change in respect to the quantities of metals produced last year from Canadian sources except possibly in the case of zinc.

Amongst non-metallic mineral products generally, there was not a startling increase in any particular commodity, but in many products prices were higher. On the whole, it may no doubt be said that the mining industry had under the circumstances a very successful year in 1917.

Labor was difficult to obtain and the efficiency of labor was considerably depreciated because of the war's withdrawals. The strikes amongst the miners of Southern Alberta in the spring of the year will be somewhat reflected not only in the coal output but also in the production of metalliferous ores in British Columbia.

Output of Fisheries.

It is not possible yet to make a close estimate of the total marketed value of the fisheries production for 1917, but the indications in November pointed to a very considerably greater value than in 1916, is the statement to *The Monetary Times* of Mr. G. J. Desbarats, deputy minister of the naval service, Ottawa. For example, the value of the various kinds of sea fish at the point of landing on the Atlantic and Pacific coasts for the six months' period, April to September, 1917, was $19,325,547 against $12,493,143 for the same period in the preceding year.

The value of forest products for the three years, 1914-1916, are as follows:—

Forest Products.	1914.	1915.	1916.
Lumber, lath and shingles	$ 67,500,000	$ 69,750,000	$ 66,075,000
Firewood	60,500,000	60,650,000	62,000,000
Pulpwood	15,500,000	15,750,000	19,975,000
Fence-posts and rails	9,500,000	9,000,000	8,000,000
Cross-ties	9,000,000	3,500,000	3,750,000
Square timber exported	400,000	480,000	185,000
Cooperage	1,900,000	1,400,000	1,250,000
Poles	700,000	500,000	575,000
Logs exported	850,000	1,325,000	850,000
Tanning materials	22,000	170,000	140,000
Round mining timbers	500,000	680,000	750,000
Miscellaneous exports	300,000	175,000	280,000
Miscellaneous products	10,000,000	9,500,000	9,000,000
Total	$176,672,000	$172,880,000	$172,830,000

Mr. R. H. Campbell, director of the Forestry Branch, Ottawa, who has supplied *The Monetary Times* with the above figures, writes: "As regards 1917, it is much too early for any exact figures of the values. I think, however, in the absence of any very definite information on the subject that these would probably run at about the same figures as those of 1916."

Primary production.	1914.	1915.	1916.	1917.
Field crops	$ 638,580,000	$ 825,370,000	$ 886,494,900	$1,089,687,000
Forests	176,672,000	172,880,000	172,830,000	173,000,000
Mines	128,863,075	137,109,171	177,201,534	195,000,000
Fisheries	31,264,631	35,860,708	39,208,378	50,000,000
	$ 975,379,706	$1,071,219,879	$1,275,734,812	$1,507,687,000

WAR FINANCE AND THE ALLIES' ECONOMY

(Continued from page 23)

He who in Britain, Japan, United States, the colonies and France can jump into leadership in solving the problems of politics, taxes, labor charges, tonnage, industry and finance, will save the cause of civilization and also of his nation. If any pseudo-leader proposes to place the returned heroes (who have disengaged their breasts from the tyrannous bayonets of the Teuton and Turk) under the bondage of the debt-usurer, he will not long remain a leader of that kind of finance or politics.

While I am a territorial expansionist, I am Gladstonian enough to say that this war must be paid off as soon as reasonably possible. Russia, Poland, Hungary, Bohemia, Serbia, Belgium, Roumania, and Holland must be economically retained by the allies to help pay off the war. Tariffs must be erected against German goods, not only to pay off the war but to hasten German democratization. The German must learn that it pays in pocket to keep his bond. The Teuton must be forced to emigrate where we can watch him and de-militarize him. The Latin, Asiatic and colored races, nations and countries, must be fitted in better to meet the cogs of allied economics, so as to help pay for the war, which the allies largely fought on their behalf against their plotting Hun enslaver.

The total expenditures by all nations for 3 years of war is 90 billion dollars, fighting 20 million men. The total expenditures of the United States in a year will be 20 billion dollars, of which 7 billion is a loan to the fighting allies.

Great Britain has fought 4,000,000 soldiers and 1,000,000 sailors and 20,000,000 tonnage for 3 years; has loaned her allies 6 billion dollars; her total cost for a little over 3 years being 25 billion dollars; 6 billions coming from revenue, and 19 billions being additional debt.

This is the most magnificent spectacle of war that the world has ever seen or will see. Instead of the war solving all problems, it will have solved two great racial and dynastic problems, but will have created hundreds of other problems worthy of the great character and metal developed in the allied ranks by the war.

The increased number of bonds now uniting the English-speaking nations in particular and the allies in general, are decidedly the promise and the guarantee of the world's peace and redemption from past woes.

Army, Navy and America.

Canada has proved that she can raise and fight an army of half a million men much more economically than the United States can. The future military defensive arm of this hemisphere should, therefore, be left mainly to Canada, and the United States should make a specialty of the naval arm,—both nations working in unison in international peace work.

As America is a greater exporter than Britain during the war, the American dollar rules the world's money markets, but the British pound sterling will regain its exchange supremacy finally, especially if Britain retains Germany's colonies. America's exports are now running near 9 billions, and her imports 2½ billions of dollars. Many problems and their needed solutions in Canada and America are similar. We are like as two peas in the economical pod; just as we are brothers of the blood and of the new international bond.

CROP FINANCING ON FIXED PRICES

Canadian Millers and the British Government Have Practically Bought the Whole of Our Wheat

The last stage of the 1916-1917 wheat crop movement was financed with prices fixed, the basic price for No. 1 Northern being $2.40 per bushel; and for the whole of the 1917-1918 movement the fixed price of $2.21 per bushel is apparently to prevail. While these prices have been satisfactory on the whole, notes of criticism are sounded from time to time in the West, as some agriculturists there are of the opinion that a higher level should obtain. In fixing the prices the Canadian government evidently followed the lead of the Washington authorities. Critics have pointed out that inasmuch as Canada exports a larger proportion of her total yield, she is not interested, to the same extent as the United States in keeping down the price. Another point of criticism is that as the western farmers during the early fall were obliged to devote their time to plowing and other work in preparation for the 1918 seeding, they were unable to get the 1917 wheat to market as promptly as they wished, and thus they lost money in interest, etc., on the carrying of the grain. So it was claimed that the fixed price should rise so much per month to cover the carrying charges. However, most people are agreed that the price that has been set gives Canadian farmers, and the western farmers especially, a very good profit; and it is the general feeling that we should not endeavor to levy an exorbitant toll on the hard pressed consumers of the mother country who are bearing a much heavier war burden than we are called upon to shoulder.

Changes in Financing.

Naturally the fixed price has caused some changes in the methods of financing the crops. The price fixing has been accomplished by other regulating activities on the part of the government. Under the arrangement that has prevailed during the season, practically the whole of Canada's surplus production goes to Great Britain. Canadian millers are allowed to fill their requirements, and nearly all the rest of the grain is bought by the British purchasing agents. The British government sees to it that the European allies are provided with such foodstuffs as they need; but to avoid competition the supplies purchased in America are taken by practically the one organization. This means that there are only the two buyers for the grain deliveries of the farmers—the millers and the agents of the British government. As the prices are fixed, competition is reduced to a minimum. Also as there is no prospect of speculative profit through holding the stuff back, the aim of the farmers has been to get rid of their produce as quickly as possible so as to save interest and other carrying charges.

There was no startling change in the personnel of the grain buyers at country points. In most cases at a given point the buying would be done by the same local millers, outside millers, and elevator companies, as in previous years; but the elevator companies not in the milling business would be virtually buying on commission for the British agents or for millers not otherwise represented there. The banks would be obliged to ship currency as usual to the various buying points in the country—owing to the extraordinary price level they would require to send unusually large amounts of currency. Also at banking points where such arrangements prevailed, the local buyers would draw on their principals at Winnipeg or other centres, from day to day, for the funds they needed to take up the daily deliveries. The local shippers would be continually turning in their sight on demand drafts on Winnipeg with bills of lading attached.

At the Big Centres.

The great changes in crop financing methods occurred at the centres—Winnipeg, Toronto and Montreal, particularly at Winnipeg. The grain itself moved as rapidly as possible to the milling centres and to the seaports; while the drafts and credit instruments representing the produce converged heavily on the principal financial centres. Every day during the grain season each bank in Winnipeg having an important branch system in the wheat fields, would receive from its branches scores of grain drafts, many of them for large amounts. Practically all of these drafts would be collected through sending them via the clearing house, into the banks carrying the principal shares of the credit to the British government and the banks carrying the accounts of the big milling companies. So the loans to the British agents and to the big millers would speedily reach large amounts. To counterbalance this there would be a striking decrease in the credits granted to the elevator companies or grain firms ordinarily doing a large export business. These latter concerns, though buying actively, would turn the stuff over immediately and keep their own loans down to the minimum. Also the loans at country branches to farmers and local dealers would be considerably less than in normal years.

Payment of Bank Loans.

Apparently the new arrangement did not permit of realization on exports quite so expeditiously as in former years. Ordinarily when the grain is placed on board the lake carrier at Fort William or Port Arthur, it is open to the bank to send the demand draft and shipping bills at once to New York for negotiation, and the bank thus got its money back very quickly. The present arrangement provided for the payment of the bank loans by the British government on arrival of the grain at the seaports. It is said that the sharp movement of the American exchange in Canada's favor towards the end of September was largely due to the action of Canadian banks in bringing home their New York balances for the purpose of carrying the special grain credit during the preliminary or intermediate stage.

In connection with produce loans during a normal season or year, it has been customary for the banks to lend up to a certain percentage of the value of the merchandise assigned as security. A margin of 10 per cent. or more was considered necessary as protection against falling prices. With this contingency removed it would be practicable to lend closer to the actual value—providing that the banker knew the loan would not be carried for a long term. Of course if there were a prospect of a standing loan, the bank would keep down the percentage advanced, so as to leave an ample margin for taking care of the interest storage, insurance, etc. But in case of the ordinary short produce loan which would be paid off within a month or six weeks, and in case of which the grade or quality of the grain has been officially established, it would be practicable to lend an amount close up to the value—because the banker could rest assured that at the end of a month, or two months, the value of the grain would be unchanged.

Canada Is Now Dependent Upon Resources

Our Inability to Borrow Abroad Will Probably Prove a Blessing in Disguise —Relation of Misuse of Borrowed Money to Economic Troubles—Financially, Canada is "on Her Own."

By SIR FREDERICK WILLIAMS-TAYLOR, LL.D.

THE past year has shown that as the war proceeds, we are being made to depend to a greater extent upon our own resources. Prior to the war, Canada was a heavy borrowing country. Among the early effects of world-wide belligerent conditions, was the closing of the London, and later, New York money markets. Thus this young nation, with a well defined habit of borrowing abroad, was suddenly confronted with the loss of the only two available markets. For the first time since Confederation, therefore, the Dominion is cast upon its own financial resources. In passing, we may note, too, that as the war continues, we will be compelled to develop more rapidly certain of our natural resources. The United States is restricting various exports to Canada, because of war conditions and we will be required, for similar reasons, to depend more upon our own stores for supplies for our part in the successful prosecution of the war.

Thrown upon their financial strength, largely an unknown quantity, the people of Canada have proved themselves equal to the severe test. The subscription of the Victory Loan, to the extent of $418,000,000 by 802,000 subscribers, is an outstanding proof of this.

As I recently pointed out, the cessation of the flow of British and foreign capital to this country, for the present, at least, will have far-reaching consequences. On the one hand, industrial development will be checked, but, on the other hand, the inability to borrow may prove a blessing in disguise, once we have adjusted our affairs to the changed conditions. It is well for us to learn to do without financial assistance, especially as the country at large already has a debt abroad, the interest on which runs into the great sum of about $500,000 per day. So long as the stream of money flowing into the country was uninterrupted, it was difficult, if not impossible, for our people to see the necessity for economy. Personal extravagance is still conspicuous in many directions, but presently economy will become general—from high motives, we hope; if not, then from stern necessity.

I have pointed out in *The Monetary Times* and elsewhere on several occasions that our misuse of borrowed money is in great measure responsible for some of the chief economic evils that have come upon us. I refer especially to the inflation which before the war started the increase in the cost of living, and to the creation of debt unrepresented by productive investment. Now that the inflow of money is suspended, we must practise economy, till the soil, produce to a greater extent the manufactured goods we require for our own use, until we emerge a wiser and a better people in a sounder economic position.

We must admit that the present Dominion of Canada has been built largely upon the foundation of British capital. Our development could never have reached its present stage but for moneys borrowed abroad. Canada, consequently, is grateful, first, to Great Britain, and secondly, to the United States, for the assistance they have thus given to the remarkable progress which our country has made, particularly during the past twenty years.

Our country abounds in natural wealth. We have an industrious and virile population. With the proper combination of courage and caution, capital and labor, energy and ideals, we shall be successful in recovering our economic balance and demonstrating to the world that we have profited materially from the lessons of experience.

Three Years' War Cost: $100,000,000,000

All the Belligerents Combined Are Spending At the Rate of at Least $100,000,000 Daily —Canada, One of the Youngest Participants, is Putting $890,000 Daily Into the War—Interesting Estimates Made During the Past Year.

By the middle of July Canada's expenditures on account of the war had totalled $623,000,000. Our daily war costs are $890,000. To the end of 1917, therefore, our war costs were approximately $693,000,000. These figures do not include expenditures made by the various provincial governments, municipal corporations, or private individuals.

"Our war expenditure is very heavy, and is growing from day to day," said the finance minister in the House at Ottawa, on July 25th. "I have had a statement prepared by the assistant deputy minister of finance, showing the outlay since April 1 of the present year. The statement I have received as to the period from April 1, 1917, to July 20, 1917, shows that our total revenue was $78,276,000 and our total expenditure (ordinary, capital and special), $40,800,000, leaving a balance of $37,000,000 for war expenditure. In other words, since April 1 of the present fiscal year we have paid our way in respect to ordinary, capital and special expenditures, and we have $37,000,000 to the good. The figures may not be mathematically accurate, but they represent a close estimate.

Total War Outlay.

The total war expenditure of Canada to July 20 this year in Canada was $388,627,000, and the total war expenditure elsewhere than in Canada, including maintenance of troops in France, from September, 1916, to July 20, 1917, based on 117,000 troops, was $234,000,000, or a grand total on account of war expenditure of $623,000,000."

The finance minister added that war expenditure in Canada from April 1 to July 20, 1917, amounted to $39,702,000.

Vast War Expenditures.

Here is a statement of Great Britain's expenditure since war began, and an estimate for the year to March 31, 1918. As far as possible the items under the head of votes of credit are as announced from time to time in the House of Commons. Interest, both on pre-war and war debt, represents actual payments made during the periods specified. As regards "ordinary supply services," etc., the actual local taxation and other consolidated fund payments have been taken for the different periods and have added thereto the due proportions of the total expenditure for ordinary supply services for the respective years:—

	War Expenditure		Other Expenditure	
Period,	Expended from votes of credit.	Interest on war debt.	Interest on pre-war debt, ordinary supply services, etc.	Grand aggregate of expenditures.
1914-15.	£	£	£	£
240 days, August 4, 1914—March 31, 1915	573,167,000	2,172,000	81,976,000	657,335,000
Per day	**2,388,100**	**9,050**	**341,700**	**2,738,900**

Great Britain's War Bill.

According to The London Statist, Great Britain's war bill is as follows:—

		Met out of				
Year.	War expenditure (a).	Revenue.	Per cent. of war exp.	Loans.	Total revenue and loans.
	£	£	%	£	£
1914-15*	575,339,000	81,996,000	14.2	565,778,000	647,774,000
1915-16*	1,439,563,000	217,172,000	15.1	1,165,319,000	1,382,491,000
1916-17*	2,081,132,000	456,447,000	31.9	1,627,188,000	2,083,635,000
	4,096,034,000	755,615,000	18.5	3,358,285,000	4,113,900,000
1917-18, April 1 to May 5*	267,088,000	38,105,000	14.3	204,135,000	242,240,000
Total to May 5, 1917	4,363,122,000	793,720,000	18.2	3,562,420,000	4,356,140,000
1917-18, May 6 to March 31†	1,902,412,000	479,614,000	25.2	1,447,646,000	1,927,260,000
Probable total March 31, 1918	6,265,534,000	1,273,334,000	20.3	5,010,066,000	6,283,400,000

(a) Includes loans and advances to Allies and Dominions.
*Actual. †Estimated.

Total Cost of War.

The cost of the war to the belligerent nations, from the beginning to August 1, 1917, has been figured at a slightly lower total by chairman Fitzgerald of the appropriations committee of the United States House of Representatives at Washington, than by The Wall Street Journal, and decidedly more economically than the calculations of the Manchester Guardian.

According to chairman Fitzgerald, total expenditures of all belligerents, exclusive of the United States, was $86,047,400,000 to August 1. The Manchester Guardian placed the aggregate cost at $107,500.000,000, omitting United States expenditures; while The Wall Street Journal figured more modestly at $89,721,500,000, after allowing for advances by some of the entente nations to others, and by Germany to its satellite nations, but including $1,629,000,000 expenditures by the United States.

As Mr. Fitzgerald may have authoritative sources of information which makes his figures of special interest, his estimates are reproduced here alongside those of the Manchester Guardian and The Wall Street Journal (last three ciphers omitted):—

Country.	Chairman Fitzgerald.	The Wall Street Journal.	Manchester Guardian.
United Kingdom	*$18,500,000	$26,705,000	*$ 27,500,000
Germany	21,300,000	19,750,000	25,000,000
Russia	15,000,000	14,250,000	17,500,000
France	15,327,400	16,530,000	15.000.000
Austria-Hungary	12,800,000	9,700,000	12.500.000
Italy	3,120,000	5,050 000	5.000 000
Other belligerents	....	6,329,000	5.000,000
Total	$86,047,400	$98,314,000	$107.500,000
Less advances	....	8,592,500	....
Net cost	$86,047,400	$89,721,500	$107,500,000

---

*British Empire. The Wall Street Journal's figures are for the United Kingdom only, war expenses of the overseas dominions being included in "other belligerents."

Advances by Nations.

Estimates by the Manchester Guardian contain nothing to indicate whether it includes in its British figures advances to Allies. The Wall Street Journal's estimates include these advances. Mr. Fitzgerald has made allowance for such advances, but, on the other hand, he includes the expenditures of the overseas dominions, which makes his figures appear a bit low; that is, if Washington press dispatches quote him correctly in making his figures apply to the British Empire.

Apparently the figures of the Guardian and The Wall Street Journal relating to Italy are rather high. Since these estimates were originally published, Washington dispatches have referred to official reports from Rome placing Italy's war costs, up to July, at $3,500,000,000. Mr. Fitzgerald has probably erred as much on one side in this case as the two publications have on the other in estimating up to August 1.

It is interesting to note that while the tabulations of Mr. Fitzgerald's estimates placed the total at slightly over $86,000,000,000, he said in the course of his speech that "the total expenditure by the nations engaged in war since it began three years ago is approximately $90,000,000,000."

Discussing Mr. Fitzgerald's estimate, The London Statist said:—"If we add the expenditure which has been incurred since, we shall not be far out if we further estimate the total at practically 20,000 millions sterling. It has to be remembered that these figures are estimates, because while the information regarding the war expenditure of Great Britain leaves a good deal to be desired, it is far more comprehensive than is the case with the other belligerents. The figures given in the following table may be taken as approximately accurate so far as the Great Powers now engaged in the struggle are concerned:—

Entente Powers.

Great Britain	£ 4,910,000,000
France	2,820,000,000
Russia	3,630,000,000
Italy	1,160,000,000
	£12,520,000,000

Central Powers.

Germany	£ 4,700,000,000
Austria-Hungary	2,580,000,000
	£ 7,280,000,000
Aggregate total cost	£19,800,000,000

Smaller Powers Left Out.

"We have left out the smaller powers, because Great Britain on the one hand, and Germany on the enemy side, are financing them to a large extent, and to include what little information is obtainable would probably result in counting the same figures twice over. From the figures before us it would appear that the war is costing the whole of the belligerents combined, roughly, 20 millions sterling a day. This does not include the expenses of the United States, which, according to a treasury statement issued in September, amounted during the month of August to nearly five millions a day, bringing up the grand total to about 25 millions sterling for every day the war continues. The total for Great Britain amounts to 4,910 millions sterling, which includes all expenses rightly chargeable to this war, of which an advance of 1,100 millions sterling to the Allies and Dominions forms part, but excludes the peace expenditure on the army and navy. Of this amount, some 670 millions sterling will be provided out of taxation, the balance by means of loans."

Of war expenditures by other nations, The Statist says:—"The estimated amount paid and to be paid into the French treasury from the beginning of the war to the end of September, 1917, is £3,220,000,000, from which has to be deducted a total of 640 millions sterling, being the normal peace expenditure for the period. In addition, it is understood that France has given credits mainly to the smaller allied powers who have obtained supplies in connection with the war amounting to about 240 millions sterling. Deducting this from the peace expenditure, we get a sum chargeable to expenses incurred purely in connection with the war of 2,820 millions sterling.

Russia's War Credit.

"The only means we have of getting at the actual cost of the war to Russia is a statement of the minister of commerce at the recently held National Conference at Moscow, when the minister stated that the cost of the war during the first three years of its continuance amounted to 34,500 million roubles, and taking the rouble at the par of exchange, this would amount to 3,630 millions sterling. Of this amount, about 670 millions sterling is understood to be represented by loans to Russia from her allies.

"As far as we are able to ascertain the figures, the total war expenditure of Italy, deducting the normal peace figures, during the first three years of the war amounted to 1,160 millions sterling.

"Of the enemy powers it is naturally exceedingly difficult to obtain reliable information. It is, in fact, only obtainable from neutral sources. As far as we are able to gather the facts, Germany appears to have spent up to the present time about 4,700 millions sterling and Austria-Hungary 2,580 millions. It will be seen from the table published above that the aggregate war expenditure of all the belligerent powers, excluding that of Japan and the United States, amounts to practically 20,000 millions sterling. In addition, it will be noted that we have not included various allied states as, for example, Brazil, which is assisting in the policing of the South Atlantic. But these states, although incurring considerable expenditure, are not, of course, spending at the rate of several millions a day. It will have been noted that M. Klotz, the French Minister of Finance, in September, in proposing a further vote of credit, stated that the total votes would amount at the end of 1917 to over 4,000 millions sterling. This sum, it will be seen, largely exceeds the figure in our table, but it includes expenditure which has not yet been tabulated, and which was, therefore, not accessible to us when the table was made up, and in addition large advances to the allied powers, part of which, but not the whole, is included in the table."

War's Cost, £20,500,000,000.

A week later, discussing its own estimate of £20,000,000,000, The London Statist said:—

"The French estimate was below the actual cost by some 2,000 millions, owing to the fact that the figures were only partially available at the time we drew up the table. In addition, we made no calculation of the expenses of the smaller powers; and, particularly, we omitted those powers which, while rendering assistance to the common cause, have not their armies actually represented at the various fronts. Bearing these facts in mind, we shall not be far wrong if we estimate the total cost of the war to all the powers engaged at roughly 25,000 millions sterling:—

Entente Powers.

Great Britain	£ 4,910,000,000
France	2,820,000,000
Russia	4,350,000,000
Italy	1,160,000,000
	£13,240,000,000

Central Powers.

Germany	£ 4,700,000,000
Austria-Hungary	2,580,000,000
	£ 7,280,000,000
Aggregate total cost	£20,520,000,000

The following table of The New York Post estimates the world's war costs as they were incurred from the day of the war's beginning, August 1st, 1914, to the day of the third anniversary, August 1st, 1917:—

	Total military costs.
1914 (August 1 to December 31)	$ 7,900,000,000
1915	26,200,000,000
1916	35,650,000,000
1917 (January 1 to August 1)	27,700,000,000
Total, three years	$97,450,000,000

Per Capita Expenditures.

Entrance of the United States into the conflict occurred in April, 1917, and expenditures of that nation have increased so rapidly that the average expenditures for the early part of 1917 have given way to a much higher average. The Entente Allies, with the United States, are now spending in excess of $110,000,000 daily in prosecuting the war. The Central Allies are spending nearly $45,000,000. The disparity is explained by the different conditions under which the embattled groups are fighting, by the needs of the Allies to spend large sums in keeping their navies and mercantile fleets at sea, by the different system of pay in the armies, by manufacture and transportation. War's money is now largely expended in the laboratory, the foundry, and the machine shop, and, in the case of the Allies, an important part is expended in costly steamship and railway transportation.

Pro-rated over the entire population, the cost of the war means much more to Great Britain than any other belligerent. France is second on the list, Germany third, the United States fourth, and Russia last. If we take simply the figures of direct military costs, without making allowances for loans made or received by any government, we find that the war is costing Britain $270 yearly for each inhabitant. It is costing France $180 for each inhabitant, Germany $144, the United States $103.

The following is an estimate of the United States treasury department (issued on October 9th last), of the cost of the war to August 1st, 1917:—

Entente Allies.

Expenditures.	Aggregate.	Present daily.
United Kingdom	$26,705,000,000	$25,000,000
France	16,530,000,000	18,500,000
Russia	14,250,000,000	15,000,000
Italy	5,050,000,000	7,000,000
United States	1,629,000,000	19,100,000
Other allies	3,250,000,000	5,000,000
Total	$67,414,000,000	$99,600,000
Less advances to their allies and dominions	$ 7,992,500,000	$22,900,000
Net total	$59,421,500,000	$76,700,000

Teutonic Alliance.

Germany	$19,750,000,000	$25,000,000
Austria-Hungary	9,700,000,000	13,000,000
Bulgaria and Turkey	1,450,000,000	2,000,000
Total	$30,900,000,000	$40,000,000
Less advances to their allies and dominions	600,000,000	....
Net cost	$30,300,000,000	$40,000,000

Grand Total.

Entente allies	$59,421,500,000	$76,700,000
Teutonic allies	30,300,000,000	40,000,000
	$89,721,500,000	$116,700,000

United States War Cost.

Exclusive of loans to the Allies, it is estimated by the United States treasury department that there will be spent for war purposes $10,735,807,007 during the present fiscal year (to end June, 1918). Ordinary government expenditures will run this up to $11,651,193,993.

Adding loans, which, it is estimated will reach $7,500,000,000 before the end of the fiscal year, the grand total is brought to $19,151,193,993. Nearly one billion of this is for ordinary expenditure and will be taken care of by taxes now in force. The grand total for war purposes, including loans to the allies, might be figured at $18,235,807,007.

The Russian finance minister issued in September a statement of the financial position of Russia, showing that the expenses of the war up to September 14th, had amounted to 41,000,000,000 ruble. (Par value of ruble is equal to 51.2 cents). The war costs are still further increasing, owing to the demand for higher wages and the increased price of necessaries.

The direct expenditure on the war by European governments is estimated as follows by an English writer who has made a special study of the subject:—

British Empire	$ 27,500,000,000
Germany	25,000,000,000
Russia	17,500,000,000
France	15,000,000,000
Austria-Hungary	12,500,000,000
Italy ....: ..	5,000,000,000
Other belligerents	5,000,000,000
Total	$107,500,000,000

Total lives lost in the war	9,750,000
Total wounded	23,500,000
Total permanently disabled	12,000,000
Total loss of population	14,250,000
Total prisoners	4,250,000
Total direct war expenditure	$107,500,000,000
Total property destruction	$6,000,000,000
Total tonnage destroyed	9,500,000
Total tonnage compulsorily laid up..	8,500,000

Cost of Other Wars.

The cost of wars to other nations have been as follows:—

Dates.	Countries engaged.	Cost.
1793-1815	England and France	$ 6,250,000,000
1812-1815	France and Russia	450,625,000
1828	Russia and Turkey	100,000,000
1830-1840	Spain and Portugal (civil war)..	250,000,000
1830-1847	France and Algeria	190,000,000
1848	Revolts in Europe	50,000,000
1854-1856	England	371,000,000
	France	332,000,000
	Sardinia and Turkey	128,000,000
	Austria	68,600,000
	Russia	800,000,000
1859	France	75,000,000
	Austria	127,000,000
	Italy	51,000,000
1864	Denmark, Prussia, and Austria...	36,000,000
1866	Prussia and Austria	330,000,000
1864-1870	Brazil, Argentine, and Paraguay..	240,000,000
1865-1866	France and Mexico	65,000,000
1870-1871	Germany	954,400,000
	France	1,580,000,000
1876-1877	Russia	806,547,489
	Turkey	403,273,745
1900-1901	Transvaal Republic and England.	1,000,100,000
1904-1905	Russia and Japan	2,500,000,000

Expense of wars, 1793-1860	$ 9,243,225,000
Expense of wars, 1861-1910	14,080,321,240
Total	$23,323,546,240
The cost of the Balkan wars	1,264,000,000

The following is an estimate of the New York Annalist of the direct cost of the war for four years from August 1st, 1914, to August 1st, 1918, provided the war continues:—

DIRECT WAR EXPENSES—AUG. 1, 1914, TO AUG. 1, 1918, PROVIDED WAR CONTINUES.

Direct cost to—	1914, Five months, Aug. 1 to Dec. 31.	1915, Twelve months.	1916, Twelve months,	1917, Seven months, Jan. 1 to Aug. 1.	Twelve months, Aug. 1, 1917, to Aug. 1, 1918.	Four years, total direct cost.
United States	....	....	....	$ 2,200,000,000	$10,800,000,000	$ 13,000,000,000
Great Britain	$ 900,000,000	$ 5,250,000,000	$ 7,600,000,000	7,000,000,000	13,250,000,000	34,000,000,000
France	1,600,000,000	4,600,000,000	6,600,000,000	3,800,000,000	7,200,000,000	23,800,000,000
Russia	1,300,000,000	4,400,000,000	5,600,000,000	3,700,000,000	6,500,000,000	21,500,000,000
Italy	....	650,000,000	2,300,000,000	1,700,000,000	2,850,000,000	7,500,000,000
Belgium, Serb, Rumania, Portugal	600,000,000	1,500,000,000	1,650,000,000	1,000,000,000	1,850,000,000	6,600,000,000
Entente Allies	$4,400,000,000	$16,400,000,000	$23,750,000,000	$19,400,000,000	$42,450,000,000	$106,400,000,000
Germany	2,200,000,000	5,400,000,000	6,800,000,000	5,200,000,000	9,900,000,000	29,500,000,000
Austria-Hungary, Turkey, Bulgaria	1,300,000,000	4,400,000,000	5,100,000,000	3,100,000,000	5,800,000,000	19,700,000,000
Central Allies	$3,500,000,000	$ 9,800.000,000	$11,900,000,000	$ 8,300.000,000	$15,700,000,000	$ 49,200,000,000
Total, all	$7,900,000,000	$26,200,000,000	$35,650,000,000	$27,700,000,000	$58,150,000,000	$155,600,000,000

INTERNATIONAL BANK IS PROPOSED

It Would Handle Post-Bellum Financial Problems—Explanation of the Scheme

An international bank to handle the financial problems that will arise after the war is a project that has been suggested in France. The plan was proposed last year by M. Andre Citroen, a well-known manufacturer of war material. He says:—

"Among the many problems which will have to be solved by the representatives of the belligerent nations at the close of hostilities will be the balancing of the world's financial accounts, and the means I suggest for doing this are that a bank of the nations should be created with the power of issuing an international and compulsory currency throughout the world, or at least in the belligerent countries, victorious and vanquished.

"This bank will have the sole right to issue and fix the value of the new money and decide the quantity of notes to be issued. This new money will not have its counterpart in gold as formerly, for the war has shown that without a counterpart in gold it is possible to issue a certain quantity of bank notes, the value of which is based on the credit of the fighting nations.

"In this new system the value of the newly created bank note, which we will call the simplex, will be based not on the credit of one country alone, but on all the nations. One could fix its approximate value, however, in relation to gold, which will still remain a product of international exchange. It will be decided, for example, that three simplex represent a gramme of gold, thus bringing the value of a simplex note down to about the value of a franc. Each nation will receive a number of simplex notes corresponding to the sacrifices made by her in the war, such as the amount of money spent, the cost of reconstruction, and pensions for widows, orphans, and invalided soldiers. From their total allotment of notes the vanquished nations will have deducted an amount corresponding to the war indemnities which will be fixed according to the wrongs committed.

Withdraw Notes Issued During War.

"The financial difficulties of the warring countries will be solved with the help of these international bank notes, and by the withdrawal from circulation of all those notes which have been issued during the war, such as rentes, defense bonds, bank notes, etc., and these will be replaced solely and simply by the international currency. As soon as this operation has been completed no country will have any war debts, and consequently no more war charges, and this will thus obviate one of the greatest and most important difficulties—namely, the crushing of the taxpayer when the war is over by taxes which will absorb the greater part of the revenue of a country.

Effect of New Currency.

"The second phase of the operation will consist in utilizing and in placing this formidable quantity of paper currency. The holders of rentes and bonds will no longer have revenues represented by coupons, but will have in their hands this international money. It will be necessary that they should utilize it in investing in shares capable of bringing them interest. There will be a decrease in the rates of interest on money. Shares which brought in 5 or 6 per cent. will rise in value, but the interest will be reduced to 3 or 4 per cent., to the prejudice of the holders, but to the profit of the workers. Then there will be the capitalization of new issues. Industries which seek to develop themselves will be able to go to a public loan department and obtain the necessary money.

Create Large Companies.

"These two categories will absorb a great deal of the new money, but it is the third category which will be the most important. This category will allow the creation of enormous companies which will be formed with the consent of the State. One has never found in France the formation of companies on a very large scale to settle the interesting problems of one country as a whole or of districts as a whole. Immense tracks of electrified railways, the construction of canals, the construction of roads for automobiles, central heating departments for towns, the development of electric lighting, the development of the telephone service, and such enterprises have not been able to be carried out owing to lack of capital. The affluxation of new capital will permit of their being constructed, and the interest on the loans will help to bring the circulation fiduciary within normal limits."

The author of the scheme recognizes that the selling of the products, higher wages to workmen, higher cost of living resulting from such a system will have to be taken into consideration, and that offices will have to be set up for exchanging the old money for the new.

BANK NOTES IN CIRCULATION

Record of Fluctuations Last Year and in 1916 — Excess Circulation Allowed

The financing of the crops last year on fixed prices is discussed in another article. The crop movement is reflected in the banks' circulation figures. The record of the greatest amount of notes in circulation at any time during the month in 1916 and in 1917 to the date for which the latest statistics are available is as follows:—

1916.	Greatest amount of notes in circulation during month.	1917.	Greatest amount of notes in circulation during month.
January	$123,224,868	January	$149,425,864
February	115,301,997	February	142,589,098
March	119,037,046	March	149,950,596
April	123,457,733	April	155,576,568
May	121,932,399	May	151,414,829
June	124,850,455	June	157,886,938
July	129,225,475	July	161,762,871
August	129,824,206	August	162,696,039
September	135,438,550	September	178,139,958
October	147,132,673	October	189,852,907
November	156,971,068		
December	161,599,987		

Excess Circulation Allowed.

An increase in circulation occurs automatically every fall. For this movement excess circulation has been allowed from September 1st to the end of February. Special war legislation now allows additional issue from March 1st to August 31st. Additional circulation, therefore, is at present available all the year round. A bank may issue its notes to an amount not exceeding 15 per cent. of the combined unimpaired paid-up capital and reserve fund. Interest not exceeding 5 per cent. per annum has to be paid to the government on the excess circulation. Comparatively little use has been made of this provision.

Under the provisions of the Finance Act of 1914 advances may be obtained by the banks from the government in Dominion notes upon approved collateral. When the crops are large and war conditions prevail in the money markets, the crop movement is likely to be slow and the financial demands in that connection more prolonged. While the Canadian banks are still in a strong liquid condition and probably able without assistance to handle the situation, as the demands of grain customers might result in curtailed banking accommodation to other sections of the community, the banks have been asked not to hesitate to avail themselves of the privileges of the act. As Dominion notes issued against grain bills are retired from time to time as the crop is sold there is no reason to apprehend a redundancy of note circulation should the banks freely avail themselves of this provision. With abundance of funds available for the crop movement, there is less likelihood of its being pressed for sale, at least against the desire of producers and dealers.

The British government has appointed a special committee to prepare for financial arrangements to be made after the end of the war. Sir Richard V. Vassar-Smith, of Lloyd's Bank, is chairman. The committee will also facilitate conversion of works and factories now engaged in war work to normal production and to meet the exceptional demands for raw materials arising from the depletion of stocks.

Forgeries in Canada Are Not Very Frequent

But the Dominion Has Had a Few Expert Forgers on a Small Scale—Details of Some Interesting Cases and Their Legal Aspect—Doctrine of Estoppel Is Very Technical

By M. L. HAYWARD, B.C.L.

IN Canada forgery is not so fine and frequent an art as in some of the more advanced nations, but Canada has produced a few expert forgers on a small scale, and in several instances their handiwork passed through different Canadian banks, giving rise to some rather important legal problems. One of these forgers, Wallace by name, was a rather clumsy artist, but was responsible for one of the most important cases which ever came before the Canadian Courts, the facts of which are rather interesting.

In this case Wallace was the manager of the Thomas Phosphate Company, of Toronto, and on August 14th, 1900, finding that the company was in need of current cash, he forged the name of William Ewing and Company—a firm of seed merchants of Montreal—to a four months' note for $2,000, payable to the Thomas Phosphate Company, at the Dominion Bank at Toronto. The next day he discounted the forged note at the bank and placed the proceeds to the credit of the company. On the same day the bank notified Ewing and Company giving the particulars of the note, and requesting them to pay the same when it fell due, and on the same day Wallace checked out part of the proceeds, leaving $1,611 to the credit of the company at the close of the day's business. On the morning of the 16th Ewing and Company received the notice from the bank, and by the 18th Wallace had checked out practically all the amount to the credit of the Thomas Phosphate Company.

Wired to Forger.

When Ewing and Company received the notice from the bank on the 16th, they wired to Wallace demanding an explanation, and on the same day Wallace wired them stating that he was coming to Montreal and would explain matters fully. On the 18th Wallace wired to Ewing and Company stating that he would see them on the 19th, and on that day Wallace went to Montreal, confessed his forgery, promised to retire the note, and asked Ewing and Company not to say anything to the bank about it. For the next three or four months Wallace kept making promises to retire the note, and Ewing and Company were continually urging him to do so, but nothing was done, and on December 4th the bank again notified Ewing and Company of the maturity of the note. On the 10th, for the first time, Ewing and Company wrote the bank stating that they had not made the note in question. On the same day, Ewing and Company wrote Wallace that they had informed the bank of his forgery, and Wallace left the country before the note matured.

When the note matured Ewing and Company refused to pay, and the bank brought suit against them. There was no question about the note having been forged by Wallace, but the bank raised the point that even if Ewing and Company had not made the note they were still bound to pay it on the ground of estoppel.

Doctrine of Estoppel.

This doctrine of estoppel is a very technical one, but an estoppel may be defined as a rule by which a party is precluded from denying the existence of some state of facts which he has formerly asserted. For instance, a landlord leases certain premises, and in the lease covenants that he is the owner of the premises leased. The landlord will be permitted, in a suit between him and the tenant, to assert that he (the landlord) did not have title to the premises, as he is said to be "estopped" from denying the title which he had asserted in the lease.

Estoppel may arise by deed or record, but generally arises by conduct, and an estoppel by conduct, has been stated as arising as follows: "where one by his words or conduct wilfully causes another to believe the existence of a certain state of things and induces him to act on that belief so as to alter his own previous position, the former is concluded from averring against the latter a different state of things as existing at the same time.

It is also held by the courts that the conduct which will raise an estoppel may be by negligence, omission, or even silence, where there is a duty cast upon the purchaser to disclose the truth.

In the Wallace case, it was argued by the bank that Ewing and Company by their silence and their failure to notify the bank of the forgery, were estopped from denying the genuineness of their signature to the note, as their silence had enabled Wallace to check out the proceeds or part of the proceeds of the note.

On the other hand, it was contended by Ewing and Company, that their silence was not, under the circumstances, sufficient to raise an estoppel against them on the following grounds:—

1. That the bank knew that the Thomas Phosphate Company was financially worthless.
2. That the bank had never had any dealings with Ewing and Company before, and no knowledge of their signature, and that they acted on the representations of Wallace, without making any inquiries as to the financial standing of Ewing and Company or as to the genuineness of their signature.
3. That, while Ewing and Company were a Montreal firm, the note was in two different handwritings and on a Toronto form.

Confession of Forgery.

4. That the bank in their notice to Ewing and Company had not led them to believe that they (the bank) would be prejudiced by Ewing's failure to repudiate the note, and that Ewing and Company were not bound to assume that a forgery had been committed until their interview with Wallace on the 19th, and his confession that the note was a forgery; and that by that time the damage had been done and the proceeds of the note had been withdrawn from the bank.

The decision of the Supreme Court of Canada was that Ewing and Company, by their silence, were estopped from denying that they were the makers of the note, and that they were bound to pay the bank the amount called for by the note.

"The case appears to me," said one of the Judges, "to come directly within the principle upon which silence under certain circumstances gives rise to an estoppel. The bank directly notified the defendants that their note would fall due at its office on a certain date and requested them to provide for the same. This distinctly implied that the bank had an interest, either of its own or on behalf of some one else, in the payment of the note and in its genuineness. While there was no intimation that the bank had acquired or was proposing to acquire the note for value, the defendants, as men of business, would know that the bank might have discounted the note and have the proceeds still at the customer's credit, or that it might make advances upon it. They would know that an immediate repudiation would enable the bank to withhold payment of any portion of the proceeds not actually paid out or of any sums not already advanced. They knew that they had made no such note, that they had given no authority for the signature. They could at once repudiate it, and they did so in their telegram to Mr. Wallace. No further information was necessary for that purpose. While the bank manager placed the proceeds to the credit of the customer without inquiry, and took no precaution against their being paid out before he could hear from the defendants, the bank did act upon the defendants' silence in the sense that it did what, it should properly be inferred. it would not have done if the defendants had at once denied the signature; it allowed the balance of the proceeds to be withdrawn."

The result of this decision was not received with favor by the legal profession or the banking and commercial interests of Canada. As a prominent member of the Canadian Bar said at the time:—

"The case seems a particularly hard one on the Ewing Company. They were brought, not by their own seeking or concurrence, into unpleasant relations with the bank and one of its customers. When the notice referred to reached them, on the morning of August 16th, the damage complained of had in part been done. When, on August 19th, they first learned from the lips of Wallace that their signature to the note in question had been forged by him, the whole damage had been done. And yet, in consequence of subsequent silence, they were compelled to pay the note in full, and thus make full reparation for the entire damage."

The decision, however, was by the highest Court in Canada, and leave to appeal to the Privy Council was refused, so that the rule laid down may be considered as established law in Canada, and is binding on all the Courts.

The result, therefore, is, that the party who receives a notice from a bank stating that they hold the note purporting to be signed or endorsed by him, and the party knows or has reasonable grounds for believing that the note is a forgery, he must immediately notify the bank of that fact, otherwise he may be compelled to pay the note and interest just the same as if it were a genuine note.

Story of a Wholesale Forger.

Wallace was merely a retail forger, and in a very small way at that, but in the following year—1901—Abondeus Martineau, a clerk in the department of militia and defence at Ottawa, went into the forgery game wholesale and strong.

The Bank of Montreal was the banker for the Dominion government and the government checks were drawn on that bank. Martineau filled up the official check forms of the militia department for a total of over $70,000, forged the names of the proper officials, endorsed them in the names of the fictitious payees, and cashed them at the Ottawa branches of the Quebec, Sovereign and Royal banks. The cashing banks then put the forged checks through the Ottawa clearing house and they were paid by the Bank of Montreal.

At that time the "militia and defence account" at the Bank of Montreal was a very active one, and the bank very frequently—often daily—sent to the accountant of the department what were called "pass-book sheets," together with the original checks. At the end of each month a complete statement was sent showing all checks paid during the month, and the letters of credit and moneys received during the month by the bank and the balance at the credit of the department. With this monthly statement was sent a blank form of receipt to be signed by the accountant acknowledging that he had received the checks entered in the statement and had examined the same and found the balance to be correct.

The accountant of the department assigned to Martineau (the forger of the checks in question) the duty of comparing these statements with the checks and the books of the department, and on his reporting them to be correct the accountant or his assistant was in the habit of signing the receipt and returning it to the bank. Martineau was, of course, on the lookout for the forged checks as they were sent up from the defendant's bank, and immediately destroyed them, but, as they were included in the pass-book sheets, he reported them along with the genuine checks as being duly vouched and they were accordingly receipted for by the accountant along with the genuine checks. The balances for each month which were thus acknowledged to be correct during the period in question included and charged against the militia department the forged checks.

Forgeries Were Discovered.

In 1902 the forgeries were discovered and the government brought action against the Bank of Montreal for the amount of the forged checks, and the bank set up the defence that by the course of dealing between the bank and the department the government was estopped from setting up the forgery.

The Supreme Court of Canada decided that the bank was liable on the ground that an estoppel could not be invoked against the Crown.

"The natural and logical legal basis for such a defence," said Judge Davies, "is the principle of estoppel and, indeed, Mr. Gormully invoked the application of this principle on the facts proved as a good defence. The trial judge, however, held that estoppel could not prevail against the Crown; the Appeal Court of Ontario sustained that ruling and then an ingenious attempt was made by defendant's counsel to shift the ground of the defence and it was argued that by accepting the pass-book sheets and acknowledging their receipt and by acknowledging the correctness of the monthly balances shown by the defendants, a contractual relation was established by implication and that the plaintiff was bound by the signature of the accountant of the department as by a settled account.

"I agree with the Courts below that the ordinary doctrine of estoppel cannot be invoked as against the Crown in any such case as this and on any such facts as are proved here.

"With regard to the argument that a contractual obligation arose between the Crown and the bank out of the officer's signature to the acknowledgment of the correctness of the pass-book sheets as rendered, I am quite unable to appreciate it apart from the doctrine of estoppel.

"Why the signature as to the correctness of these pass-book sheets should have a different effect from the signature of settlement to any ordinary account so as to prevent it being re-opened in case of the discovery of a mistake, I am at a loss to understand. The officer signing the account as correct was deceived into doing so by a clever forger. The same forger deceived the bank by the forged signatures. If the circumstances under which the accounts were acknowledged to the bank could be held to be an estoppel, well and good. But the doctrine cannot be applied as against the Crown and outside of it I cannot find any contract settling the accounts as between the government and the bank and prohibiting their being re-opened in case of mistake."

The Bank of Montreal then attempted to recover the amount of the forged checks from the other banks on whose endorsements they had been cashed by the Bank of Montreal, but the Supreme Court of Canada held that the Montreal Bank could not recover on the ground that it was incumbent on them to know the signatures of their customers and that any negligence in the case was on their part.

Quoting from an old English case, the Court said:—

" 'It was incumbent upon the plaintiff to be satisfied "that the bill drawn upon him was the drawer's hand," before he accepted or paid it; but it was not incumbent upon the defendant to inquire into it. Here was notice given by the defendant to the plaintiff of a bill drawn upon him; and he sends his servant to pay it and take it up. The other bill, he actually accepts; after which acceptance, the defendant innocently and bona fide discounts it. The plaintiff lies by for a considerable time after he has paid those bills, and then found out "that they were forged"; and the forger comes to be hanged. He made no objection to them at the time of paying them. Whatever neglect there was, was on his side. The defendant had actual encouragement from the plaintiff himself, for negotiating the second bill, from the plaintiffs having without any scruple or hesitation paid the first: and he paid the whole value, bona fide. It is a misfortune which has happened without the defendant's fault or neglect. If there was no neglect in the plaintiff, yet there is no reason to throw off the loss from one innocent man upon another innocent man.' "

Cheque was Raised.

The case of the Imperial Bank vs. Bank of Hamilton should be compared with the above—a case where one Carl Bauer had an account at the Hamilton Bank and at no time did his credit balance exceed the paltry sum of $10. He drew a $5 check payable "to cash," had it certified, raised it to $500 and cashed it at the Imperial Bank, which put it through the Toronto clearing house and it was paid by the Hamilton Bank.

When the latter bank discovered the error they demanded the $500 from the Imperial Bank, and, on their refusal to pay, entered suit against them.

The Supreme Court of Canada and the Privy Council decided in favor of the Hamilton Bank, holding that there was nothing to take the case out of the ordinary rule that money paid by mistake may be recovered back.

In this case the check as certified was as in the following form:—

No. 136. Toronto, Ont., January 25th, 1897.
To the Bank of Hamilton.
Pay to Cash ....or bearer $
Five .... /100 Dollars.
(Signed) Carl Bauer.

The altered check read as follows:—

No. 136. Toronto, Ont., January 25th, 1897.
To the Bank of Hamilton.
Pay to Cash ....or bearer $500.00.
Five hundred and ....xx/100 Dollars.
(Signed) Carl Bauer.

On this point the Court said:—

"I never supposed that there is a duty on his part to guard against crime; that evidently concerns the law-maker; but I certainly thought that he should not facilitate its commission by others and that, at least, he should be prudent, and that having occasioned damage by not filling the blanks which were the immediate cause of the fraud upon the holder in due course, he, and not the latter, ought to suffer. Negligence by the bank on which a check is drawn, is especially recognized by sections 78, 79 and 81 of the Bills of Exchange Act, as an important element of responsibility to the holder in the negotiation of crossed checks. Why not apply the same principle to the action of the bank negligently certifying a check, especially if we consider that there is no obligation on its part to accept or certify, but merely to pay. The principle of negligence seems to rule over all the operations of business men, whether under the common law, the law merchant, or any other law. A decision holding the bank so acting responsible to the holder would be more in accord with the notions of right and wrong I have learned from the writings of that great jurist, Pothier, which led to the ruling in Young v. Grote, and also in a case still more in point decided unanimously by the Court of Appeal of the province of Quebec; I refer to Dorwin v. Thomson. In my humble opinion, that ruling is the mere application of the elementary principle that every person is responsible for the damage caused by his fault to another, whether by positive act, imprudence, neglect or want of skill. I have always been under the impression that this principle was held good in every country, in England as well as everywhere else, in commercial as well as in civil matters. But after much conflict of opinion, the House of Lords in Schofield v. The Earl of Londesborough, has held that it did not apply to a case where a drawer of a bill of exchange availed himself of spaces, which he had purposely left, to raise the amount of an acceptance from five hundred pounds to three thousand five hundred pounds, and that the acceptor, who had not filled the spaces, was not liable to a holder in due course. Rightly or wrongly, the highest tribunal of the empire has overruled Young v. Grote, in so far as the general principle of negligence can be applied, because, observe their Lordships, it was founded upon the civil law and the authority of Pothier, which, they add, form no part of the mercantile law of England."

Forgery Skilfully Done.

In the case of Dominion Bank vs. Union Bank, the facts were as follows:—

The Manitoba government issued a check upon the Union Bank, respondent, signed by the officials authorized to draw such checks, in favor of the Consolidated Stationery Company for the sum of $6.

Jones, a clerk of the company, obtained possession of the check, misappropriated it, and fraudulently erased both the payee's name and the amount for which the check was drawn, and inserted instead the name of William Johnson and the sum of $1,000.

The forgery was very skilfully done, so much so that no ordinary care could have discovered it.

Jones, pretending to be Johnson, presented the check to the drawee, the Union Bank, for payment, but, being unknown and unidentified, payment was refused.

He then took the check to one of the branches of the Dominion Bank, the manager of which, without requiring identification, took the check, paid the forger $25 and placed the balance to his credit.

The Dominion Bank then indorsed the check and passed it through the clearing house to the Union Bank, which paid the amount of the check as forged.

Before the crime was discovered, but after the Union Bank had honored the check, the Dominion Bank paid to the forger Jones $800 of the amount standing to his credit.

On the return of the check to the drawer the forgery was discovered and the forger was at once arrested, tried, convicted and sentenced.

Under these circumstances the Union Bank sued to recover back the money paid by it to the Dominion Bank on the forged check, on the ground that it was paid by mistake, and as to the $800 paid out to the forger after payment of the check to them by the Union Bank and before discovery of the forgery the Dominion Bank contest their liability.

It is conceded that neither bank can be charged with negligence in not detecting the forgery by mere inspection of the check, but the respondent bank submitted that there was negligence on the part of the Dominion Bank in cashing such a check without first having had the person asserting himself as the payee identified.

The man turned out to be a forger and a thief, he was unknown to the manager, was not required to be identified, and was successful in obtaining some $825 which it seems to me would have been prevented had the usual banking business precautions been insisted upon.

The Union Bank on the other hand cannot be charged with negligence. It had declined in the first instance to pay the check to the alleged payee until he satisfied them of his identity, and only paid it when it came to them through the clearing house with the name of the Dominion Bank stamped across it. No negligence whatever can be imputed to the respondent bank; the names of the officials authorized to draw checks for the government were genuine and proper inspection would not and did not enable them to discover the forgery of the body of the check.

What the Court Said.

The Supreme Court of Canada decided in favor of the Union Bank. It was argued that the decision of the Court in the Martineau case was an authority in favor of the Dominion Bank, but the Court distinguished the two cases on the following grounds:—

"In the late case of the Bank of Montreal v. the King, we had a somewhat analogous case before us, and we there held that the Bank of Montreal, the drawee of the check, could not recover back the moneys paid by it to another bank for a forged check and which moneys the receiving bank had paid out to the forger before it had any notice or knowledge of the forgery.

"The great and broad distinction between that case and the one now in appeal, at any rate in the opinion of the majority of the Court, was that the name of the drawer of the check had been forged and that the payee by paying the check had represented to the receiving bank that the drawer's signature was genuine and was consequently disabled from recovering back the money, the signature being a forgery and the receiving bank having acted on the faith of such representation and paid away the money to the forger.

Cannot be Compelled.

"The ground upon which I based my judgment in that case as between the disputing banks, was that by paying the checks to the persons presenting them the Bank of Montreal represented to them that the checks had in fact the genuine signatures of the drawers and if upon the faith of that implied representation the holders of the checks received the moneys, as I think they did, and subsequently paid them away to the person who deposited the checks with them or otherwise had their positions altered to their prejudice respectively in consequence of such implied representations and in ignorance of the forgeries, they cannot be compelled subsequently by the drawee who paid the money, on discovering that the checks were forgeries, to pay back the money.

"In this case now before us the signatures to the check were genuine. It was only the body of the check which had been altered and forged. There was no representation expressed or implied made by the respondent bank to the appellant bank other or further than as to the genuineness of the drawer's signatures, and the ground and reasoning on which it was held the Bank of Montreal could not recover does not here apply. This case is more analogous to that of the Imperial Bank v. the Bank of Hamilton, the distinction between them being that in the latter case the payment of the money to the forger by the receiving bank was made before the paying bank had paid over the money to the receiving bank.

On Ground of Mutual Mistake.

"The question here is whether the single fact that the receiving bank did not pay over the $800 in dispute until after the paying bank had paid the check to them can avail to prevent the paying bank from recovering the money back on the ground of mutual mistake.

"That question it seems to me must be answered by determining whether the paying bank by paying the check made any representation as to its genuineness other than the representation of the genuineness of the drawer's signatures and whether the receiving bank was or was not a mere agent to receive and pay over the money. If it was such agent merely and the fact was or ought under the evidence to have been known to the paying bank they cannot recover the money back."

THREE YEARS' WAR FINANCING

Great Expansion of Credit Everywhere—Conditions of European Banks

The best guide the people of this country can have as to the effects of the war upon business, says the National City Bank, of New York, and the practicability of repeatedly raising large sums for war loans, is to be found in the experience of the European countries. Few people believed at the outbreak of the conflict that it could possibly last for so long a period as three years. It was the common view that, if for no other reason, peace would have to come before that length of time from inability of the governments to continue the expenditures. That this was wide of the truth is now evident, and even after three years those most competent to judge feel but little better able to set a date when the end must come through financial exhaustion than they were at the beginning.

In the three years Great Britain's war expenditures, including interest on the war debt and ordinary appropriations for the army and navy, amounted to approximately $23,000,000,000, of which roughly $4,000,000,000 was provided by revenue and the remainder by loans. About $5,000,000,000 of this has been advanced to allies.

The amount of revenue raised by the other countries for war purposes is not at hand, but it is known that Great Britain has done more in this respect that they have attempted. The amount of indebtedness created by the several countries is difficult to trace because of the variety of forms in which it exists. Germany is now raising its seventh public loan, the six preceding having aggregated about $14,000,000,000. The loans of the other countries are smaller, and altogether probably do not exceed the total of Great Britain and Germany, but are quite as great in proportion to their wealth.

Conditions of European Banks.

The condition of the central banks of Great Britain, France, Russia and Germany on the dates nearest to August 1, 1914, 1916 and 1917, for which public statements have been available, were approximately as shown below:—

Bank of England.

	1914.	1916.	1917.
Gold coin and bullion	$190,000,000	$270,000,000	$250,000,000
Gold for exchequer notes	....	142,000,000	142,000,000
Loans and investments	290,000,000	585,000,000	800,000,000
Deposits	335,000,000	680,000,000	865,000,000
Bank note circulation .	145,000,000	183,000,000	200,000,000
Exchequer notes	....	635,000,000	805,000,000

Bank of France.

	1914.	1916.	1917.
Gold coin & bullion—			
In vault	$ 825,000,000	$ 958,000,000	$ 650,000,000
Held abroad .	....	....	400,000,000
Discounts and advances	640,000,000	618,000,000	590,000,000
Advance to state for the war ..	....	1,600,000,000	2,100,000,000
Treasury bonds representing advances to foreign governments	....	244,000,000	550,000,000
Deposits	260,000,000	430,000,000	535,000,000
Bank note circulation	1,335,000,000	3,200,000,000	4,000,000,000

Imperial Bank of Germany.

	1914.	1916.	1917.
Gold coin and bullion	$ 338,000,000	$ 615,000,000	$ 600,000,000
Discounts and advances	200,000,000	1,635,000,000	2,780,000,000
Deposits	235,000,000	595,000,000	1,460,000,000
Bank note circulation	470,000,000	1,755,000,000	2,210,000,000
Treasury and loan bank notes ..	21,000,000	240,000,000	1,220,000,000

Bank of Russia.

	1914.	1916.	1917.
Gold coin and bullion	$ 800,000,000	$ 770,000,000	$ 645,000,000
Loans	380,000,000	2,440,000,000	6,620,000,000
Deposits	530,000,000	980,000,000	1,650,000,000
Bank note circulation	815,000,000	3,405,000,000	6,820,000,000

Expansion of Bank Credit.

These statements show a great expansion of bank credit everywhere. The situation is naturally worse in Russia, where the unsettled internal conditions have interfered with the collection of revenues and the placing of loans, throwing the government back upon the state bank for means of meeting current expenditures. The rapid increase of its paper issues has been reflected in the price of Russian exchange. In all of these countries the increased issues of paper have been in part required to take the place of gold withdrawn from circulation, and the high prices of war times have also been a factor, as we know even in the United States. In Great Britain, as in the United States, credit expansion naturally appears in bank deposits, and the great volume of exchequer notes is explained as entirely due to the replacement of gold and the increased amount of money needed in circulation. These notes were originally issued, like the Aldrich-Vreeland currency of the United States, at the outbreak of the war, to the banks for counter money and to enable them to meet any unusual demands from depositors. They proved popular, and increasing amounts have been absorbed in circulation. They are redeemed in gold on presentation at the Bank of England.

The banks of England other than the Bank of England are not required to publish statements, but it is customary for them to do so at the close of each calendar year, and some of them publish a mid-year statement, as of June 30th. Thirteen of the principal institutions, whose business is probably typical, on June 30, 1917, showed a total of loans (bills and advances) at that date aggregating $2,334,936,375, against $1,915,393,260 on the same date of 1916; investments, $1,127,841,810, against $1,186,446,330 in 1916; deposits, $4,348,539,425 against $4,001,480,880 in 1916. It should be recalled in this connection that in March last the great Victory Loan, of over $5,000,000,000, was closed. The banks loaned freely to subscribers but did not subscribe themselves, it being an agreed policy to keep the banks as liquid as possible. The result is seen in the increase of their loans to the public and a reduction of their own investments. The increase of only $474,000,000 in loans under the circumstances is a good showing. The Bank of Liverpool reports that it made loans amounting to £9,000,000 for subscription purposes, and that one-third had since been repaid.

An Indefinite War.

There is nothing in the condition of these British banks to indicate that the war may not go on indefinitely.

We have no similar statements for the unofficial banks of either France or Germany. The advances of the Bank of France to the French government aggregate about $2,100,000,000, against $1,600,000,000 at the corresponding date in 1916; besides it is carrying loans to foreign governments, allies, aggregating $530,000,000, against about one-half as much last year. The note circulation, at $4,000,000,000, is very high, but it is to be considered that the note circulation was always high relatively, the notes of the Bank of France being the popular currency in France. The circulation is approximately three times what it was at the outbreak of the war, and the increase in paper currency has been proportionately greater in both England and Germany. We give the gold holdings as they appear in the bank's statements, but we understand that the holdings abroad are in the form of gold credits and not in metal.

Although all of these figures are high it cannot be safely predicted that they may not go much higher before having any effect in themselves upon the termination of the war. Prices are high, and this is a symptom of currency depreciation, but there are other influences upon prices, notably scarcity, which is responsible for very high prices in the United States. When industry is resumed after the war we will be able to form some idea of the extent to which the expansion of the currency has been caused by high prices and to what extent the high prices are due to the currency. As prices fall so much of the currency as is actually redundant will probably find its way back to the banks.

Insatiable Demand for Currency

Remarkable Expansion Last Year — Government Issues Backed by Ample Gold — Banks and Central Gold Reserves — Currency Contraction Later on Can Be Easily Met

By H. M. P. ECKARDT

A YEAR ago, in *The Monetary Times* Annual, attention was drawn to the great expansion of Canada's currency in 1916. In the fall of that year the circulation of bank notes and government notes among the general public reached a volume never before recorded. Those high-record figures of 1916 were in turn surpassed by the unprecedented figures of 1917. Throughout 1917, the paper money actually in the hands of the public ran from $23,000,000 to $50,000,000 higher than in the corresponding months of 1916. From October, 1916, to September, 1917, the currency in use averaged about 24 per cent. greater than in the preceding year.

It is perhaps advisable to repeat the explanation given a year ago regarding the method of calculating the amount of paper currency in actual use, apart from the bank holdings. By taking the amount of Dominion notes outstanding and deducting therefrom the amount of Dominion notes held by the banks and the amount deposited in central gold reserves, the amount held by the public is arrived at. Similarly, by deducting from the total of bank notes outstanding the amounts held by banks other than the issuers, both items being shown in the monthly bank return, the amount of bank notes held by the public results; and by combining the two, we get the approximate amount of currency actually in use in the hands of individuals, firms and companies other than banks. As we have scarcely any gold coins in circulation, and as the circulation of foreign money and of subsidiary Canadian coins does not represent a large item, practically the whole of our currency is represented in these two forms; and on studying the figures of the table, we obtain an accurate reflection of trade conditions.

Bank and Government Notes Held by the Public.
(Thousands Omitted.)

October	169,562	31,853	201,415	+ 50,410	+33.4

The fact that the Canadian public required from $40,000,000 to $72,000,000 more currency to finance or carry the day-to-day transactions of 1917 than was needed for similar work in 1915, must certainly be taken as remarkable. The unprecedented expansion in 1916 was to some extent attributable to the enormous wheat crop of the preceding fall; but the western wheat yield in the fall of 1916 was disappointing and it did not furnish so much traffic to be completed in 1917. However, the range of prices for wheat, and other raw and manufactured products was much higher in 1917. It took more currency to finance a given unit or quantity of produce. Also the munition factories and other industrial concerns were very actively employed throughout the year—their wage payments and other cash outlays were in numerous instances greater than in 1916. Bankers say that the cheque tax has caused a number of manufacturers and other large employers of labor to pay their employees in currency instead of by cheque—and this caused an additional demand for bank and government notes.

So far as the government issues are concerned they are backed by what is regarded as an ample reserve of gold. The following table shows the amount of notes outstanding throughout 1916 and 1917, with the amount and percentage of gold reserve held against the notes.

Dominion Note Circulation.

1916—	Outstanding.	Gold reserve.	Percentage.
January	$179,301,003	$115,147,985	64
February	179,523,993	115,318,081	64
March	177,943,131	115,743,094	65
April	175,680,987	114,243,788	65
May	175,679,782	114,172,696	65
June	175,497,175	114,071,032	65
July	174,807,743	113,877,073	65
August	174,533,077	113,759,013	65

October	229,063,856	114,616,227	50

NOTE.—While the percentage of gold reserve held against the Dominion note circulation shows a sharp decline on October 31st, 1917, it is to be remembered that the finance department then held approved securities against $53,000,000 of Dominion note issues, in accordance with the Finance Act, 1914. The understanding is that these special issues of Dominion notes represented short loans to the banks to help move the crops and carry the special grain credits. They will doubtless be cleared off or greatly reduced early in 1918 when the crop financing is completed.

In connection with the bank note issues, it was expected that a considerable part of the expansion during the fall of 1917 would be in the form of the so-called emergency currency, which is uncovered by specific security and subject to tax at 5 per cent. In 1916 the extra currency for crop moving purposes was provided nearly altogether by means of bank issues against deposits of gold and legal tender Dominion notes in the central gold reserves. Only in one month of 1916—October—did the uncovered and specially taxed excess issues of the banks rise above the $1,000,000 level. The following table shows that while the taxed excess notes in 1917 reached larger figures than in the preceding year, they still represented but a small proportion of the excess issues covered by gold and legal tender deposits.

On that portion of their circulation which is covered by deposits in the central reserves, the banks make no profit. It is in no sense whatever a "loan from the public." On the other hand they might conceivably make a small profit, after paying the 5 per cent. tax, through lending the proceeds of "emergency" note issues for short dates to western farmers at 7½ or 8 per cent. Over and above the tax and the expenses incidental to the issue and redemption of the notes, there might be a small margin. However, while the banks' policy of keeping their extra issues of notes well covered by cash in central reserves does not directly yield them profits, there is no doubt that it contributes importantly to prevent inflation and keep the Canadian currency sound. The Bank Act gives them authority to issue something like $34,000,000 of excess notes subject to the 5 per cent. tax, without pledging security. Up to the end of September they had only used $4,343,979 of such issues.

On carefully considering the general subject of the currency expansion, one is led to the conclusion that when the inevitable contraction ensues, after the present abnormal conditions have passed away, the banks can meet it easily and comfortbly if they continue to have a large proportion of their extra issues represented by deposits in the central gold reserves.

Large Advances Made by Canada to Great Britain

Since the Outbreak of War to Date the Total Exceeds $400,000,000—Money Was Used to Purchase Here Munitions, Cheese, Meats, Etc.

According to a statement furnished to *The Monetary Times* by the department of finance, Ottawa, in November, the following was the position of our account with Great Britain on October 31st last:—

Advances Made to Imperial Government by the Dominion of Canada from August, 1914, to October 31, 1917.

Advances made to Imperial Munitions Board, Ottawa	$350,000,000.00
Advances made by the various departments for hay, oats, fish, harness and saddlery, ship construction, cheese, etc., "outstanding".	53,000,000.00
	$403,000,000.00

Advances Made by Imperial Government to Dominion of Canada in London.

Deposited in Bank of Montreal London	$378,584,160.27
Converted into dollar bonds	107,612,029.53
	$270,972,130.74
Net amount in favor of the Dominion	$132,027,869.26

Cheese and Bacon.

Not only is the Dominion government supplying money to the Imperial treasury for the production of munitions in Canada, but it is by reason of the action of the Dominion treasury in financing the Imperial treasury that the dairymen of Canada to-day are able to sell their cheese to the British cheese commission. For many years the cheese industry of Canada has been built up by reason of the export market which existed in Great Britain. If the Dominion government had not undertaken to supply the $40,000,000 which represents the value of Canada's export cheese, the dairy farmers of this country would not to-day be able to sell their cheese in Great Britain, and there is no market to-day for that cheese in the United States. The dairy farmers of Canada, by reason of the action of the Dominion government in furnishing that $40,000,000, are deriving over 21 cents per pound for their cheese. The Dominion treasury, therefore, since July, 1917, has undertaken to furnish $25,000,000 per month and more for munitions, and in addition has undertaken to supply $40,000,000 for the purchase of cheese by the British cheese commission in Canada, and some $10,000,000 additional for purchases made for the War Office account by the department of agriculture. The British government may also require some assistance in connection with the purchase of Canada's bacon.

How the Account Stands.

It is not sufficient to say that these operations are a set-off to the expenditures made by Great Britain for Canada in respect of our troops overseas. Canada has been able since the beginning of this war not only to pay her own way, but to give Great Britain a sum exceeding $100,000,000 towards the prosecution of the war, through the purchase of munitions and supplies in this country. Since the outbreak of this war, as noted above, the Dominion government has advanced in cash and securities, which securities were pledged in New York and furnished the basis of an Imperial credit there, over $400,000,000. The Canadian government issued to the Imperial treasury about $100,000,000 of 3½ and 4 per cent. securities maturing in 1928 and 1945, in liquidation of advances made by the Imperial government. The Imperial government pledged those securities in New York and used them along with other securities as the basis of a large loan which they raised there in the period preceding the entry of the United States into the war.

We have given them the securities, and we pay the interest because the securities are given. There is an adjustment of interest on both sides. We charge interest here, and they charge interest there. Canada had advanced in cash and securities to October, 1917, $132,000,000 more to Great Britain than Great Britain has advanced to Canada since the outbreak of this war. So far as the munitions industry is concerned, the Dominion government was furnishing last fall more money per month than it had furnished since the war began.

Advances Arranged in October.

At the end of September, arrangements were completed by the government with the banks for advances of $100,000,000 for wheat purchases. The banks advanced the money for the payment of the wheat at western points of delivery, and held the wheat as security until it reaches the seaboard. At the seaboard the British government, through the Wheat Ex-

port Company, accepted the wheat and repaid the banks. The credit thus advanced was a short-term one, lasting until December, 1917, and gradually relieving the strain on the banks during the heavy financing period of the crop movement. Advantage was taken of the increased circulation allowed the banks under the bank act.

Later, when the deposits begin to flow into the banks again from the farmers who have realized on their crops, the banks will be in a position to advance further credits, and the Canadian government may then be able to meet the wishes of the Imperial government and relieve it of the necessity of paying cash for wheat when delivered at the seaboard.

The temporary arrangement for partial financing of wheat purchases in Canada was agreed to by Lord Reading, representing the British government, during a conference with Sir Thomas White in Washington.

Strain on the Banks.

Commenting on these special wheat credits, Mr. Victor Ross, the Toronto financial writer, said at the time:—"The special credits to the agents and representatives of Great Britain would to a considerable extent replace the loans and advances ordinarily made to their regular customers. When consideration is given to this point the proposed credit does not appear quite so burdensome. Local grain dealers and the big elevator companies will handle the produce in some respects exactly as in previous years. That is to say, they will buy it from the farmers, pay cash for it, and ship it to the terminals.

"These operations will thus necessitate banking credits, but the credits will likely be nearly altogether in the form of sight and demand drafts on Winnipeg and other centres of the grain trade. The total amount outstanding in this way will undoubtedly be much less than the aggregate of grain loans usually carried by the ordinary customers during the active season. So if the stuff moves promptly forward by export and if the special credits are then liquidated, the banks should be able to carry the load in satisfactory manner.

Packing Products and Cheese.

"The same considerations would apply more or less to the credits for British purchases of packing house products, cheese, butter, etc. If the loans are concentrated on the name of the British government there will be a large reduction in the amount of loans carried by the packing houses and wholesale dealers in and exporters of dairy products. Probably under the new system the interest rates applying to the bank loans will be lower than usual. The government demands the finest rates, whereas the ordinary customers pay the market rates obtaining in the localities or centres where they operate. The rate of discount applying to the accounts of the smaller operators would be sensibly higher than the government's rate.

Last fall, millers stated that the most serious obstacle to be overcome in their trade was the securing of sufficient funds to buy flour to meet Britain's needs. The mother country is unable to pay cash for the commodity, and while American capital could probably be furnished with facility, millers stated this would be supplied only for wheat exported to the United States and ground in American mills. In view of the large credits which the banks have already advanced for the movement of the grain crop and the purchase of produce and provisions, in addition to the war needs which the Canadian public furnished in connection with the November war loan, the providing of additional capital to take care of the export of flour was considered a serious problem.

How it is Done.

When the war commenced, funds for its conduct, so far as Canada was concerned, were advanced by the British government, £2,000,000 monthly. This continued for about seven months. It was intended to issue long-term loans in London at a later date to repay these war advances, but a different arrangement was formulated in August, 1916.

When the national revenue commenced to improve early in 1915 and loans were successfully floated on this side of the Atlantic, the Dominion became able to finance its war expenditure in Canada, and also to assist the British government in financing here its purchases through the Imperial Munitions Board. Since then, the Dominion finance department has borrowed from the Imperial treasury only the amount represented by our expenditures in Great Britain and at the front.

Then an arrangement was made by which the Dominion government will pay off from time to time its temporary indebtedness to the British government by the issue to the Imperial treasury of Dominion bonds bearing the same rate of interest and having the same maturities as the issues of the Imperial government from the proceeds of which the advances have been made. The amount of the bonds will be calculated, having regard to the issue price of the imperial securities. In other words, the Dominion government is, without any flotation expenses, funding its temporary indebtedness by the sale of its bonds to the Imperial treasury, bearing interest at the favorable rate at which the Imperial government has been able to borrow in the London market since the outbreak of the war. The Dominion government bonds will be payable in dollars, and all necessary adjustments of exchange will be made.

The finance minister had in view the purpose of clearing up by the issue of permanent securities the floating indebtedness of the Dominion and at the same time providing the Imperial government with the best of collateral for banking advances. The Dominion securities will not be sold, but will continue to be owned by the Imperial government. In this way, very close financial relations have been established between the two governments.

As to the Future.

This financing plan raises interesting speculations. Apparently the bonds are given to the Imperial treasury, and the Bank of England charges up to the Imperial government account the temporary loan originally made to the Canadian finance department. The original loan was in pounds sterling, but the long-term bonds substituted therefor are in dollars. This arrangement will materially reduce loans shown by the Bank of England. As the newly-issued bonds are drawn in dollars, the intention probably is ultimately to find a market for them on this side of the Atlantic instead of placing them in the hands of British investors at the conclusion of the war. Meantime they will be in convenient form for use in New York. It is not improbable that when conditions suit London, New York and Ottawa, the bonds will be partly distributed in the American investment field.

Bankers suggest also that the Dominion bonds which were taken by the Imperial treasury last year may be used to some extent to offset or cancel a like amount of British treasury bills held by the finance department here and by the Canadian chartered banks.

During the fall of 1915, an arrangement was made with the British government for a total authorized loan of £30,000,000 to be availed of, if necessary, at the rate of £2,500,000 a month during 1916. That arrangement ensured financial stability for the year, but the government used this provision to a very slight extent.

A new Swiss loan of $30,000,000 at 5 per cent. will be issued in January. The cost of Swiss mobilization to date amounts to $250,000,000.

We have no data as to the banking situation in Germany beyond the statement of the Imperial Bank. It shows that the note issues of the bank have gone up from about $470,000,000 at the outbreak of the war to $1,300,000,000 in 1915, $1,700,000,000 in 1916 and $2,100,000,000 in 1917.

An Amsterdam dispatch says that Swedish merchants are taking advantage of premium on Stockholm exchange in Amsterdam by making large purchases of Dutch shipping shares. The gold supply of the Bank of Netherlands has increased from 162,000,000 guilders at the outbreak of the war to 700,000,000 guilders.

For the convenience of subscribers to the Victory Loan and of the banks handling the large transaction, the finance department agreed that payments due on January 2nd, 1918, could be made at any time up to and including January 11th. The extension of time was given in order that subscribers might not be unduly detained waiting their turn in making their payments. It is particularly requested that subscribers will not wait until January 11th, or a day or so before, and thus create the situation sought to be avoided. For the convenience of subscribers banks will remain open on the evenings of Thursday and Friday, January 3rd and 4th, and in the afternoon of Saturday, January 5th. Evening hours from 7.30 to 9.30; Saturday afternoon from 2 until 6 o'clock.

METRIC SYSTEM ADVOCATED

Present Complexities Cause Confusion and Errors and Help Fraud

BY HENRY LYE.

The metric system involves the use of decimals in all computations and statements of weights, measures and measurements. It is founded upon a unit of length, termed the metre or measure, from which the units of mass (gram) and capacity (litre) are derived. It has been the subject of investigations and recommendations by legislators, commissions and economists for more than two hundred years. It is now legalized by more than two-thirds of the civilized nations of the world. It must be learned by all those who attempt to trade with foreign peoples, or who wish to understand the day-by-day news of foreign countries. We, however, are not yet fully reclaimed from the barbarous usages of our predecessors, because we never effect any reforms until they are forced upon us.

It is about sixty years since the present currency of dollars and cents was introduced in Canada. We have not advanced any further in simplifying our dealings with other people or amongst ourselves, but are being overwhelmed by the independent accounting of every new invention in mechanics or discovery in science.

Confounded by Simplicity.

We are confounded by the simplicity of the metric system and its natural adaptation to every requirement of weights, measures of capacity and measurements of length or mass. We prefer that our medical men adhere to their dog-Latin and their antiquated forms of prescriptions. We look with awed admiration upon the fe-fo-fums of our law courts, with their fiery faces, their nicey-pry-into-us and other terms as absurd as were their wigs. We send representatives to parliaments, which, instead of law and equity, give us statutes requiring continuous amendments, so called, until they are finally repealed. We have as many varieties of bushels as we have of farm products, as many different gallons as we have of liquids to fill them. We measure our horses by "hands," regardless of the differences between those of my lady and those of her man-servant or maid-servant. We are confused by our coal dealers, who give us 2,000 pounds instead of the 2,240 pounds of our tons. We still hear the prices of some of our purchases as being "two bits," and have not fully emerged from the era of York shillings. We still subscribe guineas, although the corresponding coins are obsolete. We still take three barley-corns as the unit of length. Our land surveyors, whilst using the chain of 100 links, still give us "acres," roods, perches and feet and inches. Our artizans and mechanics have yet to struggle with duo-decimals, whilst lumber and shingles are sold by the thousand. Everywhere we are met by different forms of computations, because we prefer ruts to roads. Not only do these complexities cause confusion and errors, but they give opportunities for frauds and deceptions, which are, too often, perpetrated at our expense. The "errors" are not always unintentional in ordinary business matters, but we stolidly submit to a state of affairs which ought to be abolished.

Most of our school books appear to have originated in jobbery and corruption, and to have been compiled for the purpose of preventing the proper education of our children. Every year we suffer our children to be loaded with books containing refinements and reductions as absurd as those of the schools of Salemo as described in the Golden Legend, whilst the poor students are wearied by "home work" and prevented from healthy recreations by involutions and convolutions, for which neither teachers nor scholars can find practical uses, and which will be altogether forgotten in after years. We are acting the part of Rehoboam in allowing this state of affairs, with its temptations to compilers and publishers, whilst we know that good, old Lindley Murray sufficed for our most famous scholars in the study of grammar.

Every child should learn the multiplication table to 100 × 100, and should be taught so thoroughly as to comprehend the relation of subtraction to addition and of division to multiplication as being obverse (the writer learnt the multiplication table to 1,000 × 1,000, enabling him to save years of work in investigation of accounts, inventories and invoices, as well as to check erroneous statements in evidences, which, being corrected whilst the witnesses were in the box, prevented the success of falsehood and perjury). This course of arithmetic, in conjunction with neat writing, correct punctuation and the correct reading and pronunciation of the poems of Tennyson and Longfellow, should suffice for the ordinary requirements. All further education should be for adaptation in the special avocations to be followed in life. The pupils, from childhood to youth, should be freed from incumbrances, which, by taking up time, hinder their proper and necessary education. These incumbrances would no longer exist if we adopted the metric system in all our dealings in respect to weights, measures and measurements.

Utility is true beauty. That which is not useful is either a luxury or a burden, which should not be imposed upon anybody. The useful should be furnished to everyone, so that each one may be fitted for the stern warfare of life for the general good. Therefore, the metric system, so simple in form and so universally applicable, should be at once established among us, and all the useless absurdities and complications of our present system (sic) of weights, measures and measurements abolished. We would then know the prices of everything we buy or sell and would look to the quality more closely.

Commissions of Inquiry.

This is a matter for our honest business men—for parents and guardians. Legislators have been fooling with commissions of inquiry for the last two hundred and fifty years, but have shirked their plain duty in the matter, contenting themselves with expediencies and emergencies, except some special matter is forced upon them and an election is in sight, or, seeing that so many abuses could be shattered by one blow, they make excuses of difficulties which do not exist in fact, forgetful of the dicta of Abraham Lincoln, who dispelled the perplexities of the financiers and commissioners met for the purpose of discussing the resumption of specie payments after the Civil War in the United States by the remark that "the proper way to resume is to resume."

Why do we lag behind nations and peoples whom we are apt to regard as our inferiors? Is it because we are really less competent, or less honest, or unable to comprehend that which is so simple as not to need abstruse complexities? We are enjoined to be economical and efficient, but are not freed from the hindrances which waste our time and money.

RATIO OF METALLIC RESERVE TO NOTE ISSUES

Since the outbreak of the war the volume of circulating notes issued by the world's leading banks has greatly expanded, and, although the stock of gold held against the obligations has likewise increased in most cases, the ratio of metallic reserves to note issues has been steadily declining. In the case of the banks of neutral countries, the ratio has greatly increased. The following table gives the percentages for 1914 (at the outbreak of the war), for 1916 and for 1917:—

	Per cent. 1914.	Per cent. 1916.	Per cent. 1917.
Bank of England	75.3	61.1	61.5
Bank of France	71.3	30.4	27.5
State Bank of Russia	102.6	22.8	12.7
Bank of Italy	56.4	30.7	21.3
German Reichsbank	52.5	34.7	31.4
Bank of Netherlands	54.8	84.7	82.8
Riksbank, Sweden	48.0	...	44.2
Norges Bank, Norway	43.9	49.5	44.2
National Bank of Copenhagen, Denmark	61.7	59.5	64.8
Bank of Spain	66.5	85.4	93.4
Swiss National Bank	46.2	80.5	72.6
Bank of Japan	61.1	75.5	94.5

Upon the average, fire occurs every year in one out of every eighty buildings in cities and towns. Fire prevention is concerned, therefore, not only with the erection of new buildings, but with what is of equal or even greater importance—correction of the worst faults in existing buildings so that they may be less liable to destruction.

(1) Prior to 1904 the Bank of Montreal's year ended in April. The profits during 1911 include $708,800 expended in premises and those of 1912, $511,000; in previous years these expenditures were deducted. 2% bonus since June, 1912.
(2) Figures for 1912 are from Jan. 1st to Nov. 30th inclusive.
(3) Profits for 1908 are for year ending Nov. 30th; previous years ended May 31st. 1913 figures are for 5 months ending 30th April. 1915 figures are for year April, 1915. Net profits for year ending April, 1916, $970,713. Dividend, 10%.
(4) 1907 figures are for 18 months from June 15th, 1906 to Nov 30th, 1907.
(5) 1912 figures are for 11 months; financial year changed.
(6) 1903 figures for 6 months ending Dec. 31st.
(7) 1908 figures are for 9 months only; date of financial year changed.
(8) 1905 figures for 18 months; 1907 figures include $175,000 premium on new stock.
(9) The financial year of the Bank of Ottawa ends on Nov. 30th.
(10) 1906 figures for 11 months ending 30th April, 1906. All other figures for year ending 30th April.
(11) Began business under name of Home Bank of Canada in 1906 and held first annual meeting in June of that year.
(12) 1912, profits are for 11 months.
(13) Sterling Bank has only been doing business since 1906.
(14) Weyburn Security Bank commenced business only in 1911.
‡ 5% cash dividend and 5% stock dividend.
* Including $200,000 debts recovered.
§ The Quebec Bank was purchased by the Royal Bank of Canada on Dec. 31st, 1916, and did not issue a statement showing the result of its business for that year. Dividends amounting to $191,450, being at the rate of 7% per annum, were paid during the year.
(A) Result of business for 5 months only.

REGULATION OF NEW SECURITIES ISSUES

An order-in-council was passed in December, 1917, under the authority of the War Measures Act upon the recommendation of the minister of finance by which new issues in Canada of bonds, debentures or other securities of any provincial, colonial or foreign government, municipality, commission, local government, institution, corporation or incorporated company can only be made or sold with the approval of the minister of finance by his certificate in writing.

The regulation also applies to any new issues or offering of shares, whether preferred or common, of any incorporated company.

It is expressly provided that nothing in the order-in-council shall affect the trading in bonds, debentures, securities or shares of capital stock heretofore issued and placed upon the market. In other words, the order applies only to issues made from this time forward. Provision is made whereby any issue or sale in contravention of the prohibition of the order may be restrained, and heavy penalities are provided for violation of the regulation.

The object of the order is to conserve the Canadian financial market for the issues of the Dominion government and to prevent the issues being made for purposes which may well be deferred until the end of the war.

MAXIMUM NAMED FOR MILLERS' PROFITS

After November 1st, 1917, the net profits of Canadian millers were limited to a maximum average of 25 cents on the milling of sufficient wheat to make a barrel of flour of 196 pounds and the offals produced in connection therewith, according to a regulation of the Canadian food controller. Mills are licensed and required to manufacture one or more of three standard grades of flour, which represent a higher percentage extraction than the white flour formerly in general use in Canada. Cash prices for these standard grades will be set from time to time. Mr. W. Sanford Evans is supervising the carrying out of the arrangements, co-operating with a special advisory committee of the millers.

CHANGES IN COMPANIES ACT

Review and Analysis of the Amended Legislation Last Year

BY THOS. MULVEY, K.C.

In regard to recent amendments to the Dominion Companies Act, the various sections of the amending act may be readily grouped for the purposes of discussion as follows, reference being made to the sections of the principal act amended:—

1. Sec. 5—Interinsurance authorized.
2. Sec. 7A—Provisions for the creation of corporations without share capital.
3. Sec. 7B—Provisions for the creation of companies with shares without nominal or par value.
4. Sec. 13—Amendment limiting the required advertising of incorporation to one issue of the Gazette.
5. Sec. 43—Prospectus clauses.
6. Sec. 54—Reduction of capital.
7. Sec. 69—Registration of mortgages and charges.
8. Sec. 75—Consent to use name of a proposed director.
9. Sec. 92—Amendment of provision for investigation.
10. Sec. 94A and 105—Audit, annual meeting and annual statement to shareholders.
11. Sec. 106—Annual statement to department.

1. Interinsurance is a modern method of mutual insurance. It is usually brought about by a contract between persons or companies in the same class of business whereby the parties to the agreement agree to bear the loss which any of them may suffer by fire or other calamity. Under such a contract the parties insure each other. It is a contract of insurance. Section 5 prohibits a company incorporated under Part I. of the act to carry on the business of insurance. It can scarcely be said that one contract of interinsurance or several can be such as to be deemed the business of insurance. The question has, however, been raised in litigation in British Columbia and at least one of the Western States. This amendment is intended to set at rest any doubt of the capacity of a company under Part I. of the act to enter into this class of insurance. By section 15 of the amending act the capactiy of companies incorporated by act of parliament to which Part II. of the act is applicable is similarly dealt with.

Without Share Capital.

2. The Companies Act was drawn to provide only for the creation and control of business and profit-making enterprises. Charitable, philanthropic, professional, sporting and similar associations carrying on their purposes throughout the Dominion could be created by parliament alone. This was a cause of delay and expense. The large prospective numbers of war charities and returned soldier movements gave the impetus which produced the section. The main provisions are the following: Associations within the section are limited to these (a) carrying on operations in more than one province (b) without pecuniary gain, and (c) having objects of a national, patriotic, religious, philanthropic, charitable, scientific, artistic, social, professional or sporting character, or the like. Unlike business companies, corporations under this section must file by-laws controlling their operations. Such provisions of the by-laws as the applicants desire may be incorporated into the charter. All the by-laws are subject to the approval of the Secretary of State. By-laws incorporated in the charter may be changed only by supplementary letters patent, and other by-laws may not be amended or varied until the amendments are approved of by the Secretary of State. The necessity of this control is evident when it is considered that many of the associations created under this section are of a quasi-public character. It should be pointed out that the filing of bylaws has an important effect on the manner in which these corporations may deal with the public. By-laws, when filed in the department, are public documents, and public notice of them is thereby given.

Persons dealing with these corporations will be deemed to have notice of all such by-laws, and will be bound thereby. On the other hand, a company under the provisions of the act is not required to file by-laws, and no constructive notice of them can affect a contract of such a company. For instance, if the by-laws of a corporation under this section require a certain quorum of directors or trustees, a resolution at a meeting where there is not a quorum cannot bind the corporation. There would be no similar result if a company's by-laws required a quorum. On account of the control of these corporations being required to be set out in filed by-laws, many of the sections of the act are made inapplicable to corporations under this section. Existing corporations created by private act may be brought under this section.

Shares Without Par Value.

3. Section 7B introduces what may be considered a new class of companies. Heretofore the authorized capital of a company was required to be divided into shares of a specified amount. Take a company with a capital of $100,000 divided into 1,000 shares of $100 each. Each share is supposed to represent a value of $100. Under one possible circumstance is this true. In the usual case it is not true. It is a technical misrepresentation. The true value is one thousandth part of the value of the assets of the company after deducting liabilities. This section adopts the true value, and provides that no value is to be shown on the share certificate. The certificate indicates only the number of shares authorized to be issued and the number which it represents. The price at which they are issued is provided by the charter or by the by-laws of the company.

Beyond the advantage indicated there is this further. When a fresh issue of capital is required it is a business matter to determine what should be paid for each share. Under existing conditions a company is bound to sell its shares at par—a discount is illegal. For that reason an issue of fresh capital frequently necessitates a reorganization of the company by reduction of the capital to the value of its assets, or compels the issue of preferred shares. Similarly in an increase of the number of shares, they may be sold at an amount equivalent to the actual value of existing shares.

Companies with shares without par value have been created for many years past under the laws of several countries of continental Europe. In America the first suggestion on the subject was made by Mr. Francis Lynde Stetson, a prominent New York corporative lawyer, in the year 1892 at a meeting of the New York Bar Association. The method was included in the draft of the Federal Companies Senate Bill of 1910. The subject was discussed by Victor Muracett in the Hansard Law Review, 1913.

Par Value Not Essential.

This subject was dealt with in the report prepared for the president of the United States by the committee presider over by President Arthur T. Hadley, of Yale University, for the investigation of railway securities, and is discussed as follows:—

"We do not believe that the retention of the hundred dollar mark, or any other dollar mark, upon the face of the share of stock is of essential importance We are ready to recommend that the law should encourage the creation of companies whose shares have no par value, and permit existing companies to change their stock into shares without par value whenever their convenience requires it. After such conversion any new shares could be sold at such price as was deemed desirable by the board of directors, with the requirement of publicity as to the proceeds of the sale of such shares, and as to the disposition thereof, giving to the old shareholders, except in some cases of reorganization or consolidation, prior rights to subscribe pro rata, if they so desired, in proportion to the amount of their holdings.

"As between the two alternatives of permitting the issue of stock below par, or authorizing the creation of shares without par value, the latter seems to this commission the preferable one. It is true that it will be less easy to introduce than the other, because it is less in accord with existing business habits and usages; but it has the cardinal merit of accuracy. It makes no claims that the share thus issued is anything more than a participation certificate.

"The objections to the creation of shares without par value are two in number: First, that their issue will permit inflation by making it easy to create an excessive number of shares; and second, that it will produce a division of roads into two classes, those whose shares have a par value and those whose shares have not. The second of these objections does not appear to be a very serious one. There are

listed on the stock exchanges to-day, side by side with one another, shares of the par value of one hundred dollars, shares of the par value of fifty dollars, shares with very much smaller par value, and a few, like the Great Northern ore certificates, with no par value at all. The share sells in each case simply for what the public supposes it to be worth as a share. The danger of inflation deserves more serious consideration. We believe, however, that it is more apparent than real, because shareholders will be jealous of permitting other shareholders to acquire shares in the association except at full market value, and will not permit the issue of such shares to themselves at prices so low as seriously to impair the market or other value of their holdings. Shares, either with or without par value, and whether sold at par or above par or below it, should, except in cases of consolidation and reorganization, be offered in the first instance to existing shareholders pro rata.

Offers Special Facilities.

"The issue of stock without par value offers special facilities for consolidation and reorganization.

"Where two roads have consolidated whose shares have different market values, it has been the custom to equalize the difference by the issue of extra shares of the consolidated company to the owners of the higher-priced stock. This practice has always tended to produce increase of capital issues, and may readily cause the new stock to be issued for a consideration less than its par value. The only alternative was to scale down some of the old stocks; and this often involved serious difficulties, both of business policy and of law. By the simple expedient of omitting the dollar mark from the new shares the number can be adjusted to the demands of financial convenience without danger of misrepresentation or suspicion of unfairness to anyone.

"In the case of reorganization, the advantage of shares without par value is even more obvious. It is here that the necessity and justice of getting money from stockholders is greatest. It is here that the impossibility of getting them to pay par for new shares is most conspicuous. We believe that in such cases the public interest would be subserved and the speedy rehabilitation of the roads promoted by requiring the conversion of the common stock and encouraging the conversion of the preferred stock into shares without par value, the certificates simply indicating the proportionate or preferential claims of the holders upon assets and upon such profits as might from time to time be earned.

"All of these considerations seem to apply with equal force to the securities of railroads under state incorporations, and we believe the laws of the several states could with advantage be modified so as to provide for the issuance of stock without par value."

The section follows, with a few verbal changes, the amending act of the State of New York, 1912. Similar legislation has been adopted in Maryland, Delaware, California, Maine and, it may be, in several other states.

Advertising.

4. Under the act before amendment the incorporation of a company was required to be advertised in two issues of the Canada Gazette and four issues of a local paper. The latter advertising appears to have been a relict of former legislation. When the application for incorporation was required to be advertised by four insertions of a notice in a local newspaper before the petition was filed, there may have been a useful purpose in advertising. It is difficult to see the purpose of advertising afterwards. Section 13 is repealed and re-enacted so that one notice is required to be inserted in the Canada Gazette, and no further advertising is required.

Clauses in Prospectus.

5. The well-known prospectus clauses were first adopted in the Companies Amendment Act of the United Kingdom in 1900, improved in 1907, and consolidated in 1908. Similar clauses have been adopted in Ontario, British Columbia, Alberta and Saskatchewan. However, the clauses relating to the certificate to entitle the company to commence business and requiring a statutory meeting have not been included. Companies under the act may be divided as follows: (a) Private companies—that is, those restricting the right to transfer shares, limiting the number of shareholders, and prohibiting any invitation to the public to subscribe for shares or debentures. To such the clauses do not apply. (b) Companies which do not offer shares for public subscription. These companies are required, if they allot shares after January 1st, 1918, to file a notice in lieu of prospectus. (c) Companies which offer shares for public subscription. This last class must file a propectus as required by the clauses. Undoubtedly the clauses prohibiting a company commencing business until the minimum subscription is taken up and a certificate to do business issued were well intended; but the Canadian investing public does not appear to insist on compliance with them. They are, in common parlance, "side-stepped" in Ontario to such an extent as to be useless. The most important sections under this head are those which provide adequate responsibility by directors and others for statements made in the prospectus. Many of the provinces have enacted legislation requiring a prospectus to be filed by all companies, and respecting the right to recover damages which may be sustained by reason of untrue statements in such prospectus, and in some quarters it is suggested that such legislation applies to prospectuses issued on behalf of Dominion companies. There is reasonable doubt of the correctness of this suggestion. This amendment, however, adopts provisions similar to those of the provinces, and no doubt will supersede the provincial legislation.

Prior to the amendment a defrauded subscriber to shares or bonds was obliged to resort to an action for deceit, in which the defendant is liable for untrue statements, upon which the plaintiff acted to his damage. The rights of the plaintiff were limited both in the subject of his claim and the persons against whom the action could be brought. This amendment enlarges these rights of action and places the responsibility upon (a) directors at the time of the issue of the prospectus; (b) persons named as directors in the prospectus, or who have agreed to become directors; (c) promoters; and (d) persons who authorized the issue of the prospectus.

Reduction of Capital.

6. A difference of opinion arose in interpreting the sections of the act authorizing a reduction of paid-up capital. A doubt was expressed by an English judge in discussing the act of the United Kingdom of 1867 whether that act permitted a reduction where capital was repaid to shareholders. It was subsequently held in discussing the extent of authorized reductions that where capital was lost the authorized capital might be reduced, but not where capital was returned. It was further suggested that adequate protection was not afforded creditors where capital was repaid. The result of these doubts and differences of opinion was that companies were obliged to reorganize where unnecessary capital was found to be on hand. In order to allay these doubts the sections of the act of 1908 were adopted with verbal changes to harmonize with other provisions of the Dominion act with this exception.

Under the act of 1908 the application for authorization of a reduction of capital is required to be made to the courts. Under the amendment the application is to the Secretary of State. Adequate machinery for full protection of creditors is provided by directing that a list of all creditors must be disclosed with the application. If names of creditors are withheld, penalties are provided and rights preserved. Where the application provides for the repayment of capital to shareholders, the Secretary of State may direct that, pending the application, the words "and reduced" must be added to the name of the company whenever used, so that in the dealings of the company during that period due notice may be given that the authorized capital of the company is being reduced.

An important consequence of this amendment is that provisions may now be made for the redemption of preferred shares. This method of financing was first adopted under the Ontario act in 1907. It has been found to meet business requirements and to be more satisfactory than to provide capital by the issue of bonds.

Registration of Mortgages.

7. One of the most important provisions of the amendment is that which provides for the registration of certain charges and mortgages. This section follows verbatim the corresponding section of the act of 1908 with this exception, that the classes of mortgages and charges are more limited. The act of 1908 requires registration of the following:—

(a) A mortgage or charge for the purpose of securing any issue of debentures; or

(b) A mortgage or charge on uncalled share capital of the company; or

(c) A mortgage or charge created or evidenced by an instrument which, if executed by an individual, would require registration as a bill of sale; or

(d) A mortgage or charge on any land, wherever situate, or any interest therein; or

(e) A mortgage or charge on any book debts of the company; or

(f) A floating charge on the undertaking or property of the company.

Book Debts to Banks.

The amendment omits (c), (d) and (e). Clause (c) is unnecessary in Canada. The provincial laws in all cases require registration in order to preserve priority. The same comment applies to (d). The omission of (e) is of doubtful expediency. No doubt the bulk of assignments of book debts in Canada are made to banks, and it would be a great hardship if assignments to a bank as collateral of book debts and accounts upon which drafts are made should be registered. There is undoubted need of clause (f). It has been decided by the Ontario courts that floating charges need not be registered either under Bills of Sale and Chattel Mortgage Acts or Land Registry Acts, and grave frauds could readily be carried out in this way. These mortgages and charges must be registered within thirty days. Where the property charged is out of Canada this period is extended by the time required for the ordinary despatch by post. Where through oversight, ignorance or accident charges or mortgages are not registered, the Supreme Court of the province of the head office of the company may give relief. The register of mortgages in the State Department is open to inspection, and the company itself must also keep a register of mortgages for inspection. Notice of the appointment of receivers under charges or mortgages must be given to the department. The priority of certain preferred clauses which obtain under the Winding-up Act are given in cases of receivership. Severe penalties are provided for impractice of the provisions of these sections. These sections are not operative until after January 1st, 1918.

Use of Names as Directors.

8. A frequent method of fraud is the naming of prominent persons as directors when it may be that they have not agreed to act, or agreed to do so only if the flotation is successful. To avoid this it is provided that a person named as a director in a prospectus or a notice in lieu of prospectus cannot be capable of acting in that capacity unless he is an incorporator of the company, or has signed a contract filed with the Secretary of State to take the qualificative shares, or has signed a consent similarly filed to act as a director.

Inspection.

9. These sections of the act respecting inspection of companies have been largely modified, and follow more closely the act of 1908. In that act, however, the holders of 10 per cent. of the issued share capital are required to petition the board of trade for the inspection. Under this amendment the petition may be made by such proportion of the shareholders as in the opinion of the Secretary of State warrants the application. The act as it formerly stood required the petition to be made by 25 per cent. to the court. The proportion of shareholders petitioning and the fact that the proceeding was in the nature of litigation rendered these possessions of little assistance to the minority shareholders.

Audit Annual Statement.

10. Under the act before amendments a company was not required to hold an annual meeting, nor to have a periodic audit of its accounts. If a meeting were held, a financial statement was required; but such a statement could be readily prepared to cloak rather than disclose the true financial condition of the company. Under this amendment an annual audit is required, and must be made by an auditor appointed at a shareholders' meeting. The annual financial statement must show a series of accounts. A comparison of the annual statements, having regard to each item of the account, should show from year to year the changes in the financial position of the company. These sections have been taken from the Ontario act passed in 1907. The items of the accounts required in the financial statement were suggested by the Ontario Institute of Accountants, and have met with general approval.

11. Under the act as it stood companies were not required to make annual or other periodic returns. Under section 106 the Secretary of State could ask for a return which, in very few instances, afforded information which was required. Once a charter had been issued from the department there was no official means of knowing whether the company had organized or gone into business. The names of directors or officers or adequate information of the corporate activity could not be obtained. The amendment requires annual returns to be filed in the state department showing certain defined statements regarding its position with respect to the issue of shares, bonds and debentures on the preceding 31st of March, and the names of directors and officers must be disclosed. This latter date is no doubt taken so that in any statistical compilations which may be preferred the period of the return may correspond to the fiscal year of the Dominion. The first return required must be made before June 1st, 1918.

The return is not so onerous as is required under similar sections of other jurisdictions. The list of shareholders is not required. Such a list is of little practical use. If the names of shareholders and the control of the company are desired to be kept secret, the ready means is at hand of placing the shares in trust or making transfers the day before the return is required or of issuing share warrants. If a creditor requires the information, it can be readily obtained in an examination of the judgment debtors. The filing of a financial statement seems to be purposely omitted. Such a statement should be for the shareholders only, and that is provided for. It would hamper business to require the copy of a balance sheet to be placed on a public file. Persons entering into a business transaction with a company are in a position to ask for a financial statement. This is the time it should be asked for, and when so demanded it gives legal rights which are not otherwise acquired. Penalties for neglectng to file this statement are enforced summarily by a magistrate and not by the ineffective *qui tam* action.

The amendments are an advance to a uniformity of company law approximating the act of 1908.

DOMINION NOTES CIRCULATION

Changes in the Law Since War Commenced—How the Figures Have Varied

In the war session of parliament of August, 1914, the power of issue of Dominion notes was increased by providing that the finance minister should hold gold to the amount of 25 per cent. of the Dominion notes issued up to a total issue of $50,000,000, and in regard to Dominion notes issued in excess of that amount, gold to be held equal to such excess. This legislation, which authorized an increase of Dominion notes from $30,000,000 to $50,000,000 without limitation or condition, left it open to the government to avail itself of the legislation at the time it was passed or at any later time. In other words, there was an integral change made in the Dominion Notes Act.

Denomination of Notes.

As regards denomination, notes of any denomination may be issued to make up the amount named. It may be wholly in ones, twos, or in fives or large legals, but it will be a combination of all. It is desirable that the total amount of free Dominion notes that should be outstanding at any time should not be materially in excess of the amount of notes of small denominations in the hands of the public. In other words, in order that the Dominion may be able to retire its notes in gold there should not be outstanding a larger amoun than is required from time to time by the community for its purposes. There is, however, a safeguard against any difficulty on that score. In the Bank Act there is a provision that the chartered banks of Canada must hold 40 per cent. of their cash reserves in Dominion notes. That being so, the amounts which the banks must hold under that legislation cannot come in for redemption.

The following table shows the course of the Dominion note circulation since a month before the outbreak of war.

October	229,063,856	114,616,227

The Finance Act, passed at the war session held in 1914, provided for the issue of Dominion notes against a deposit of approved securities. The banks have availed themselves of this privilege. The amount of notes issued and outstanding under this heading, for example, on September 30th, 1917, amounted to $11,450,000, and on October 31st, 1917, to $53,620,000.

BANK LOANS ON LIVE STOCK

Legislation was introduced by Sir Thomas White at Ottawa last year amending the provisions of the Bank Act in regard to banks' loans to farmers on the security of live stock. Legislation of this nature was passed in 1916, but the machinery thus provided was found to operate unsatisfactorily and new methods were introduced accordingly. The legislation of 1916 required farmers to give as security for cattle loans either bills of sale or chattel mortgages, registered according to the laws of the provinces in which they were given. It was found in practice that many farmers objected to giving chattel mortgages, and, moreover, the drawing and registration of such instruments involve a certain amount of expense. The new legislation of 1917 permits the banks to make loans on live stock and take assignments of such stock in simple form. Any province may make provision for the registration of these liens by having them filed with the officials who file mortgages or bills of sale. Where the provinces do not take action to this end, the liens will, of course, be in the nature of secret liens. Sir Thomas White explained at the time that he had hesitated to extend the principle of secret liens, but the farmers had been asked to increase production and steps must be taken to help them.

FIFTY MILLIONS FROM TOURIST TRAFFIC

Before the War, It was Our Fourth Industry in Point of Value—Scope for Government Action

BY JOHN F. PIERCE

Under normal conditions the tourist traffic from the United States into Canada represents an industry of some fifty million dollars. Outside of the money which the tourist leaves with the transportation companies there are his hotel bills, incidental expenses, purchases from our merchants, which run into considerable money, more than one would ordinarily think, for the reason that $100 worth of wearing apparel may be taken back duty free, and in addition often elects to take back a considerable quantity of goods on which he is willing to pay duty as there are many articles which may be purchased in Canada at a great deal better value than it is possible to obtain them in the United States.

Added to this is the rolling stock that has to be arranged for and the outfitting of passenger steamers each year, so that altogether, it is a safe prediction to state that in good times fifty million dollars is spent in Canada in connection with the United States tourist industry, which was, prior to the advent of munitions, our fourth largest industry.

Fluctuations of Traffic.

This business, unfortunately, is subject to as many vicissitudes as the grain crop. Since the commencement of the war it has required most careful nourishing. During the seasons of 1911-1912-1913 travel was very heavy, and was also fairly heavy until the outbreak of the war in 1914. In 1915 it was cut almost to nothing because of the propaganda spread in the United States that it was necessary to procure passports. This was fostered largely by interests unfavorable to Canada, and also, it is firmly believed, as part of the German propaganda. However, with the help of our immigration department and strenuous efforts on the part of the transportation lines we were able to combat this, so that in 1916 travel was heavy The past year has been below our biggest years on account of the United States entering the war and the uncertainty as to the draft. However, one pleasing feature is the fact that Canadians have begun to appreciate their own scenic attractions, and to a large extent the shortage of the United States traffic was compensated for by the extra travel on the part of Canadians.

One of the greatest sources of revenue from United States tourist business is through the movement of large party organizations, such as the Shriners, Elks and Knights of Columbus, who all hold their conventions during the summer months. The large cities of Canada are neglecting golden opportunities in not making a concentrated effort to get after this business. The city of Philadelphia employs a convention manager, whose business is to do nothing else but solicit conventions to be held in Philadelphia. As an example: The Shriners have had as many as 50,000 people at their conventions, and there are several cities in Canada capable of handling them. Just to give an idea of the revenue in it, the Unitarian conference took place in Montreal during the latter part of September. There were 800 delegates present, and allowing for railroad fare, hotel bills, etc., an average of $100 spent by each delegate meant $80,000 brought into the country that would not have otherwise been spent.

Scope for Government Action.

It is felt that if the government would take some official action in encouraging this tourist business to come to Canada, that inasmuch as Europe is closed to the tourist, it would mean a large migration into Canada. The government spends large sums to encourage immigration, which is very desirable, but a still further sum should be spent to encourage the United States tourist industry. The transportation companies do all they can, but their efforts are looked upon, more or less, as mercenary and do not carry the same weight as government action would. The transportation companies are doing their part. The officials, while realizing that their first duty is to secure revenue for the organizations which they represent, feel that beyond this they are doing their bit towards cementing the friendship between the two great nations. They like to feel that they are in the front line trenches of the international boundary line of goodwill, realizing that Canada and its people will be judged to a

Every Will that creates trusts should name a Trust Company as Executor. An individual executor may die before his duties are fulfilled; he may become incompetent through sickness; he may become insolvent and involve the estate in loss; he may move to distant parts.—A Trust Company, on the other hand, never dies, and has constant experience in the duties of Executor. The expense is at most no greater than for a private executor.

Enquiries solicited.

JOHN J. GIBSON,
Managing Director

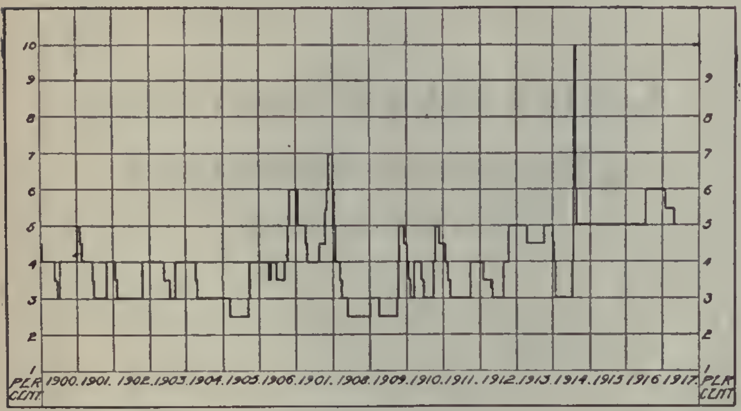
considerable extent by the treatment the tourists receive when coming in or going out, by its carriers. They are not alone, however, in this action, as there are many organizations in Canada to-day who are doing their best to entertain and look after the stranger within our gates, to see that he goes back with a proper impression of our great and growing country.

There is no doubt that Canada has more attractions to offer to the tourist than any one country in the world. There are countries in Europe that have certain specific attractions that are household words, but Canada, with a combination of mountains, rivers, lakes and cataracts, offers vacations of from an hour to a week's duration unequalled at a most moderate cost, even in these days of inflated values. Furthermore, these attractions should not be overlooked by our own people. It is all very well to say we have seen the Alps, or to talk about the Danube or the fjords of Norway, but if we are asked if we have seen the Rocky Mountains, Niagara Falls, or the Saguenay canyon, and have to admit that we have not, it is rather a reflection upon our own country. When an organization of Texas bankers, numbering 150, come all the way from Texas to view the scenic attractions, or a Maharajah from far-off India, there is not much excuse for our own people not taking advantage of the opportunities right at their door. I emphasize this point particularly, as during the summer months 75 per cent. of the tourist travel in and about Canada comes from the United States.

BANK OF ENGLAND RATE

Only Two Changes Were Made Last Year—Record of Changes Since 1899

The Bank of England rate was lowered from 6 per cent. to 5½ per cent. on January 18th, 1917, and again to 5 per cent. on April 6th. The rate was changed only once in 1916 from 5 to 6 per cent. This change was made on July 13th, and was the first since August 8th, 1914, when the rate was reduced from 6 to 5 per cent. The reduction of ½ per cent. in the bank's official rate of discount last January was due to the desire of British treasury authorities to aid the flotation of the new British war loan. The second change was due to the prospective financial assistance of the United States to the allies, no longer necessitating maintenance of high bank rates as a protective measure.



The following table compiled for *The Monetary Times*, gives the number of changes in the Bank of England rate for a series of years:—

Year.	Times lowered.	Times raised.	Total changes.
1917	2	.	2
1916	.	1	1
1915	.	.	.
1914	4	3	7

The Bank of England discount rate was raised in 1914 to 10 per cent. on Saturday, August 1st, three days before the war, having been raised from 4 to 8 on Friday, and from 3 to 4 on Thursday. The rate had stood at 3 since January 29th, 1914. These increases were made to conserve the gold holdings of the bank. The 10 per cent. rate had been equalled previously only on two occasions—in 1857 and 1866.

The fluctuations in order of severity from 7 per cent. to 5 per cent. at the Bank of England, have been as follows, the figures being in order, year, lowest rate per cent., highest rate and fluctuation: 1914, 3, 10, 7; 1866; 3½, 10, 6½; 1873, 3, 9, 6; 1858, 2½, 8, 5½; 1847, 3, 8, 5; 1861, 3, 8, 5; 1863, 3, 8, 5.

Details of Changes.

After the war, trade and commerce will be for a time disorganized and new conditions will have to be met. In addition to conserving our present trade in natural and manufactured products, efforts must be made to increase Canadian trade in foreign markets, having particular reference to the markets of those countries with which we are at present allied. The senate last year appointed a committee to inquire into and report upon the best methods of conserving and increasing our domestic and overseas trade, to the end that our present prosperity may not unduly suffer when the stimulus resulting from orders for munitions and other war supplies is removed. The following is the committee: Hon. Messrs. Beaubien, Edwards, McLennan, Dandurand, Gillmor, and Frederic Nicholls.

THE
HOME BANK
OF CANADA

ORIGINAL CHARTER 1854

BRANCHES AND CONNECTIONS THROUGHOUT CANADA

THE HOME BANK OF CANADA

THERE are now many splendid opportunities for the investment of sums of one thousand dollars and upwards, but a savings account still remains the best possible investment for smaller amounts.

CENTRAL GOLD RESERVE

It Has Been in Operation Over Four Years Now—Its Record

The central gold reserve at Ottawa has now been in operation a little over four years, it having become available to the chartered banks in September, 1913. The purpose of this reserve is to extend the banks' circulation facilities, which had hitherto proved insufficient. Deposits may be made therein either in current gold coin or in Dominion notes.

The following record, compiled for *The Monetary Times*, shows the deposits in the reserve for each month since its inauguration:—

1913.	Deposits in Central Gold Reserve.
September	$ 3,350,000
October	7,373,977
November	8,100,000
December	7,597,066
1914.	
January	3,500,000
February	3,000,000
March	3,500,000
April	3,250,000
May	3,550,000
June	3,050,000
July	4,400,000
August	4,150,000
September	10,950,000
October	13,000,000
November	10,800,000
December	9,700,000
1915.	
January	6,950,000
February	5,250,000
March	5,550,000
April	5,800,000
May	5,900,000
June	5,500,000
July	6,350,000
August	6,550,000
September	7,850,000
October	11,750,000
November	15,100,000
December	17,360,000
1916.	
January	11,860,000
February	10,460,000
March	12,010,000
April	14,410,000
May	14,810,000
June	17,710,000
July	19,010,000
August	20,860,000
September	24,010,000
October	35,660,000
November	43,300,000
December	43,700,000
1917.	
January	32,050,000

September	64,870,000
October	80,770,000

The banks have made increasingly greater use of the central gold reserves, a new high record having been established last year. During the first year of its operation their deposits in the reserve did not reach $10,000,000, whereas in 1916 they exceeded $35,000,000 and in 1917 $50,000,000.

How the reserve works is shown in the following hypothecal example: Suppose we have a bank with a paid-up capital of $12,000,000, a reserve of a like amount, $10,000,000 of gold and $10,000,000 of Dominion notes. Such a bank would primarily be able at all times to issue and keep in circulation $12,000,000 of notes, or an amount equal to its paid-up capital. Moreover, from the beginning of September to the end of February it would be able temporarily to augment its circulation by 15 per cent. of its paid-up capital and reserve, namely, 15 per cent. of $24,000,000, or $3,600,000. Under special legislation of 1914, this can now be done all the year round. Further, suppose that it keeps in the central gold reserve only one-quarter of its holdings of gold and Dominion notes. It can then issue at any time extra notes to the amount of $5,000,000.

GERMAN WAR LOANS

The following table, compiled by *The Monetary Times*, gives particulars of Germany's seven war loans to date:—

Issued.	Rate.	Issued at	Amount reported subscribed
September, 1914	5.	95	865,000,000
September, 1914	5	97.50	250,000,000
March, 1915	5	98.50	2,071,000,000
March, 1915	5	98.50	193,000,000
September, 1915	5	99	3,025,000,000
March, 1916	5	98.50	2,678,000,000
September, 1916	5	98	2,674,000,000
March, 1917	5	98	3,192,000,000
September, 1917	4½ & 5	98	3,107,000,000

NATIONAL DEBT NEARLY BILLION DOLLARS

War Has Increased National Debts to Record Figures——Debt of United States

In 1913, before the war commenced, our net national debt totalled $314,000,000. In June, 1915, it had risen to $450,000,000; in July, 1916, to $635,000,000; and in August, 1917, to $864,000,000. If our war expenditures during the last seven months of the current fiscal year (which will end in March next) average what they did for the first five months (namely, $51,000,000), we shall have a national debt in March, 1918, of approximately $934,000,000.

Britain's Debt Over £5,000,000,000.

At $1,000,000,000, our national debt would be about one-twenty-fifth part of Great Britain's debt. In the Imperial House, on October 30th, 1917, Chancellor Bonar Law stated that Britain's national debt on September 29th, 1917, was £5,000,000,000. A report of the select committee of the House of Commons on national expenditure, issued on October 6th, 1917, said that, excluding £1,321,000,000 owed by Great Britain's Allies and Dominions, the national debt up to September 30th had been added to by approximately £3,000,000,000. The accretion to the debt, the report said, tends to become more rapid, and, roughly speaking, each six months of the war will necessitate a gross addition of £1,000,000,000, or, excluding loans, a net addition of £750,000,000.

With interest at 5 per cent. and 1 per cent. for the sinking fund, the gross addition to the debt charge consequent upon each six months of the war, on the present scale of expenditure, would be about £60,000,000, and, deducting payments due by the Dominion and the Allies, £45,000,000.

Despite the entry of the United States into the war, the report continued, the advances to the Allies showed no tendency to diminish.

The variations in Britain's debt are shown in the following table:—

National Debt.

Debt in	Principal.
1775 (before American War)	£ 128,583,000
1783 (Peace of Versailles)	249,851,000
1802 (Peace of Amiens)	520,207,000
1816	885,000,000
1857	836,000,000
1899	635,000,000
1903	798,000,000
1914 (March 31st)	707,000,000
1915 (March 31st)	1,165,802,000
1917 (September 29th)	5,000,000,000

Per Capita Debts.

The following are the per capita debts of the belligerent nations, compared for the first three years of war:—

	August 1		
	1917.	1916.	1914.
Great Britain	$422.60	$306.40	$74.50
France	475.00	371.25	162.50
Russia	76.85	60.00	26.25
Italy	140.30	119.50	77.75
Entente nations	$192.45	$147.45	$58.40
Germany	277.95	211.00	76.45
Austria-Hungary	175.50	140.60	70.75
Turkey	44.20	40.00	30.00
Central Allies	$204.55	$158.40	$67.40
Grand total	$196.60	$151.60	$61.35

Debt of United States.

All of the above figures contrasted with a per capita indebtedness for the people of the United States of about $10.82, but the entrance of the United States into the struggle and its vast loans to the Allies have caused a very rapid increase in the national debt of that country. Interest-bearing public debt of the United States in September was $4,902,346,015. This includes receipts from the first Liberty Loan and outstanding treasury certificates of indebtedness, issued in anticipation of the second Liberty Loan. Notwithstanding the large debt augmentation that has taken place since the

entrance of the United States into the war, per capita distribution of public debt, at $40.21, is considerably below what it was for a long period subsequent to the Civil War. As late as 1874 the per capita debt exceeded the present figure. On June 30th, 1866, interest-bearing debt stood at $2,332,331,208, with per capita at $65.82. At that time the population of the United States was about one-third what it is now. The per capita has been in close proximity to $10 for a number of years, while interest-bearing debt has remained well under a billion dollars since 1901.

CALL LOANS ABROAD

Totals Were Not Unduly High Last Year—Record Since War

When war broke out, our banks had over $125,000,000 of call loans in New York, which amount, during the world-wide financial crisis, was rapidly reduced and without trouble to about $74,000,000 in November. With improving conditions, a smaller crop to finance, and less demand for funds in Canada, the total call loans abroad reached the high total of $189,346,216 in October, 1916. Since then, and throughout 1917, the total was considerably less. War between Great Britain and Germany commenced on August 4th, 1914, and at the end of that month, Canadian banks had withdrawn $29,000,000 of their loans from abroad, despite the fact that critics were positive that the banks could not recall these loans in a hurry during the crisis. Between June and November, 1914, the Canadian banks withdrew loans amounting to $63,000,000. Between the autumn of 1914 and May, 1915, there was a gradual increase in these loans until they reached $136,000,000, a total within a million dollars of the high mark in June, 1914. The figures were large in 1916, especially during the latter part of the year. Last year, the tendency was for smaller totals.

No Reason for Complaint.

The usual complaint regarding call loans is that Canadian banks are loaning their funds in New York to the detriment of the business community in Canada. As the late Mr. Alexander Laird, former general manager of the Canadian Bank of Commerce, once put it: "Notwithstanding all that financial critics have written about the Canadian banks sending to New York moneys needed in Canada, in order to take advantage of the high rates occasionally prevailing there, such a thing as a bank curtailing its commercial loans in Canada for a purpose of this kind is absurdly improbable."

This particular business between Canadian banks and New York has been going on for half a century. The results have been satisfactory to Canada, because they have yielded a steady profit to the banks, have strengthened their position and have enabled them to lend to their Canadian customers on more favorable terms than perhaps would have been possible otherwise. The larger portion of these loans are carried in New York at 24 hours' call, and are practically as readily available as cash. Except on rare occasions, New York call loans bear a lower rate of interest than Canadian mercantile loans. Therefore, the Canadian banks aim to carry such an amount on call in New York as will constitute, with the cash carried in Canada, a reasonable reserve of cash and immediately realizable funds.

Excessive Rates are Seldom.

Only occasionally during the past 20 years have excessive rates for call money prevailed in New York for more than a few days in a year. Obviously, a Canadian banker would not sacrifice prominent business connections in Canada for such a temporary advantage. Selfish reasons alone would be sufficient to prevent the banks from lending Canadian funds outside of the Dominion except to the extent that is necessary for the purposes of their cash reserve.

By carrying call loans abroad, disturbance or inflation of the home markets in Canada is avoided and funds lying in New York can be utilized gradually to meet Canada's external obligations for merchandise imported, and the interest and principal of foreign-held securities.

The course of call loans abroad and largely in New York, for the period beginning two months before the declaration of war is of interest and is shown in the following table, compiled by *The Monetary Times*:—

	1914.	1915.	1916.	1917.
January	....	$ 85,796,641	$134,248,552	$155,747,476
February	....	89,890,982	139,138,651	162,344,556

BANK LOANS TO MUNICIPALITIES

Total was High During Greater Part of the Year—Figures for Past Four Years

Since only August, 1913, have the chartered banks' loans to municipalities been shown separately in the government bank statement. Previously, these advances were included in the figures representing current loans and discounts to business generally. The following table, compiled by *The Monetary Times*, gives the bank loans to municipalities since August, 1913, to the latest month last year for which figures are available:—

The following table, compiled by *The Monetary Times*, shows the volume of bank loans to municipalities since January, 1914, to October, 1917:—

	1914.	1915.	1916.	1917.
January	$29,301,620	$35,952,805	$32,015,371	$24,487,272
February	30,372,854	38,437,903	35,149,915	26,121,324
March	31,890,843	41,227,449	38,649,462	29,877,911
April	30,168,812	43,031,360	44,371,050	35,931,996
May	33,689,577	43,948,436	43,924,036	39,790,191
June	37,260,571	46,889,816	46,773,032	42,757,673
July	36,372,334	44,029,446	42,385,096	43,989,207
August	39,664,534	46,020,730	39,882,811	43,940,176
September	44,338,873	43.928,331	38,708,745	42,721,563
October	47,316,076	45.682,230	37,613,530	41,204,781
November	44,706,055	41,064,550	32,945,963	....
December	38,256,947	30,878,028	24,056,797	....

Fluctuation in Amount.

Three years ago, these loans were at their highest point in October, the total being $47,316,076. In 1915, the highest total was $46,889,816 in June. In 1916, the largest sum was $46,773,032 in June. The loans during the fall months of 1916 were generally lower than for the previous two years. At the end of 1916, the total of $24,056,797 was the lowest on record since the returns were published separately. The figures remained at comparatively small totals early last year, but commenced to increase materially by midsummer. In July, for example, they were $43,989,207, a gain of about $20,000,000, or 83 per cent. over the record of January. By that time, war loans had the entire right-of-way in the world's money markets, and municipalities were unable to market their securities. This accounted for the high figures during the latter part of 1917. From midsummer onward last year, the loans exceeded $40,000,000.

At the end of August last the "index number" of average English prices for forty-five commodities, reckoned on the Sauerbeck system, was 175¾. This compares with an average of 189, computed by Professor Jevons for 1809 at the climax of rising prices in the Napoleonic wars.

The stock of gold in the United States, as estimated by the treasury, reached its low point during the war at the end of 1914, and its high point at the end of June, 1916. From $1,887,200,000 on August 1st, 1914, it declined to $1,815,900,000 on January 1st, 1915: rose to $3,090,600,000 on July 1st, 1917, and stood on October 1st, 1917, at $3,035,300,000.

102 Darke Block - Regina

MONEYS COINED BY CANADA'S MINT

During the past ten years, the branch of the Royal Mint at Ottawa has coined for issue 139,517,849 moneys, with a total value of $17,329,518.93. The details are given in the following table, covering the period from January, 1908, to October, 1917, and supplied to *The Monetary Times* by Dr. James Bonar, deputy master of the Royal Mint at Ottawa:—

	Jan. 1, 1908-Dec. 31, 1916.	Jan. 1, 1917-Oct. 31, 1917.	Total, Jan., 1908-Oct., 1917.
Gold.			
Number	952,175	....	952,175
Value	$6,457,280.40	....	$6,457,280.40
Silver.			
Number	72,801,711	10,784,355	83,586,066
Value	$8,814,099.55	$1,508,342.90	$10,322,442.45
Bronze.			
Number	46,289,151	8,690,457	54,979,608
Value	$462,891.51	$86,904.57	$549,796.08

Part of the metal used in the Ottawa Mint was purchased in Canada and part in the United States.

During the ten months of 1917, to October 31st, the Ottawa Mint issued coins as follows:—

Gold	$ 910.07
Silver	1,358,200.00
Bronze	80,400.00

The only gold coins issued were sovereigns.

The Canadian Bank Act revision in 1913 established central gold reserves for the securing of issues made above the paid-up capital of the issuing banks. The Ottawa Mint, however, has more direct concern with the statutory reserve of the Dominion's finance department, held against Dominion notes and (in small part) against deposits in Dominion savings banks.

Japan had loaned $550,000,000 to the Allies up to November 1st, 1917.

CANADIAN BANK CLEARING HOUSES

No additional bank clearing houses were opened last year. Two were opened in 1916, one at Kitchener, Ont., on January 10th, and one at Sherbrooke, Que., on February 11th. Three clearing houses were estabilshed in 1910, one each at Brandon, Lethbridge and Saskatoon. Three, Moose Jaw, Brantford and Fort William, were established in 1911; two, New Westminster and Medicine Hat, in 1913; and one, at Peterborough, in 1914. No new clearing houses were opened in 1915.

The following table, compiled by *The Monetary Times*, shows where the 25 bank clearing houses are situated:—

Clearing house.	Commenced business.
Halifax, N.S.	1886, 1 July.
Montreal, Que.	1889, 7 January.
Hamilton, Ont.	1891, 15 June.
Toronto, Ont.	1891, 21 July.
Winnipeg, Man.	1893, 4 December.
St. John, N.B.	1896, 1 May.
Vancouver, B.C.	1898, October.
Victoria, B.C.	1898, 2 November.
Quebec, Que.	1901, 1 May.
Ottawa, Ont.	1901, 9 September.
London, Ont.	1902, 1 June.
Calgary, Alta.	1906, 18 April.
Edmonton, Alta.	1906, 11 July.
Regina, Sask.	1909, 1 October.
Brandon, Man.	1910, 1 April.
Lethbridge, Alta.	1910, 1 September.
Saskatoon, Sask.	1910, 15 October.
Brantford, Ont.	1911, 1 January.
Moose Jaw, Sask.	1911, 9 February.
Fort William, Ont.	1911, 2 October.
New Westminster, B.C.	1913, 2 January.
Medicine Hat, Alta.	1913, 1 May.
Peterborough, Ont.	1914, 16 June.
Kitchener, Ont.	1916, 10 January.
Sherbrooke, Que.	1916, 11 February.

BANKRUPTCY ACT FOR CANADA

Some Suggestions as to Form and Procedure—System of Voluntary Assignments

BY H. P. GRUNDY.

A Federal bankruptcy act is a much-needed reform and has become a live issue in Canada. Without doubt a bill will be presented to the Dominion parliament either at the next or following session for commercial interests, both wholesale and retail, have expressed their desire for immediate bankruptcy legislation.

The principal objects to be sought by a Federal act and which are lacking in our present insolvency laws are shortly as follows:—.

1. Uniformity throughout Canada in bankruptcy or insolvency matters.
2. Involuntary bankruptcy, or procedure whereby the creditors can force an insolvent debtor to turn over to a trustee his assets for pro rata distribution among creditors.
3. Procedure for the discharge of an honest debtor carefully safeguarded from laxity and fraud.
4. Ratification by the court of composition and extension agreements when signed by 75 per cent. of creditors thereby making them binding on minority creditors.
5. Safer and more businesslike methods of administering insolvent estates.

As to Court Procedure.

These objects are all very desirable and necessary, but the question worrying the business man is,—can they be obtained without subjecting the winding up of insolvent estates to greater expense and delay than under our present provincial acts.

The legislatures of countries such as Great Britain, the United States and Australia have adopted as a basic principle that court procedure and supervision are necessary in the administration of bankrupt or insolvent estates. The bills which were submitted from time to time to the Dominion parliament, during the past twenty years, contained somewhat similar procedure. The necessity of court supervision is now being advocated in some quarters of Canada. (1)

What Does Business Man Find?

He makes enquiries in Great Britain and the United States and ascertains quite readily that commercial interests complain of "expense and delay" in administering estates through court procedure, and that such interests endeavor to keep estates out of the bankruptcy court by inducing the debtors to turn over their assets to private trustees for distribution. This is an unsatisfactory state of affairs, for both debtor and creditor lose the more important benefits and safeguards of the act.

He finds that in the United States there is now an agitation on foot to simplify the bankruptcy act by eliminating court procedure therefrom, but the American business man is met with the difficulty that *once a system is established, courts formed, officers appointed, forms prepared and government fees fixed it is a difficult matter to make a change.*

The business man also notes with some apprehension the results obtained in the winding up of insolvent companies under "The Dominion Winding-up Act," the procedure in which is not more complicated or expensive than that of the English bankruptcy act.

The chief argument advanced for court administration is that some trustees or official assignees in the past have proved to be dishonest or rapacious, but this is more the fault of our provincial acts in not providing a more careful method for the appointment of official assignees or trustees, and in not providing for adequate bonds, taxing of accounts and for penalties where overcharges and infractions of the act occur.

We should have a Federal act as soon as practicable to replace our present confusing insolvency system which is now based on nine separate provincial acts. Such Federal act should, however, retain the system now in force in most of the provinces whereby a debtor makes an assignment direct to a trustee. This system should be retained not only because of the "expense and delay" of court procedure, but because it is the system used and understood by the majority of Canadian business men. *Legislation should not disturb existing laws and usages more than is necessary.*

The system of voluntary assignments should be made safer and more businesslike to creditors by having the trustees appointed under the act, first recommended by resolution of the Chamber of Commerce, or Board of Trade, of the particular district to which they are appointed; each trustee should give to the government a general bond for, say, $20,000, and creditors should have power to require an additional bond in any particular estate; trustees' accounts should be taxed when necessary and trustees should be liable to severe penalties for all overcharges or other infractions of the act.

System of Voluntary Assignments.

The system of voluntary assignments should be made attractive to debtors by simplicity of proceedings, less expense and delay in winding up estates, by giving the assignors the right to apply for a discharge and by not placing them under the same handicaps and restrictions as the debtors who force creditors to take involuntary proceedings in bankruptcy.

Procedure for involuntary bankruptcy should be provided giving the right to a creditor or creditors, when an act of bankruptcy is committed, to present a petition to the court asking that the debtor be declared bankrupt and his assets turned over to a duly appointed trustee for administration. This procedure should be simplified by eliminating further court procedure after the receiving order is made vesting the debtor's property in the trustee. Involuntary bankruptcy, however, would very rarely occur for under this procedure the debtor will be declared a "bankrupt," his estate will be subject to a certain amount of additional expense, his after acquired property will, until he obtains a discharge, become the property of the trustee, and it is suggested that until honorably discharged he should be disqualified from holding all public positions of trust, such as member of parliament, mayor, reeve, councillor, school trustee and like offices. A further moral handicap will be that, although it is not suggested, his discharge should depend upon the consent of his creditors or of any percentage thereof, still this discharge will always depend to a certain extent upon the good will of the creditors which will more readily be obtained by a debtor who makes a voluntary assignment.

The act should further contain procedure for the discharge of an honest debtor. It is suggested that this procedure should be based upon the English act and practice, for enquiries show practically no dissatisfaction under that act, while in the United States this right appears to be insufficiently safeguarded against fraudulent or dishonest debtors.

Procedure should also be established for the ratification of composition and extension agreements where signed by say 75 per cent. in number and amount of creditors, and where the judge is of opinion that the composition or extension is for the benefit generally of creditors. Past experience in Canada has shown that the minority creditors can often force payment in full by refusing to enter into these agreements and by threatening to set the same aside.

Application of Act.

The involuntary procedure should not apply to the following classes:—

(a) Companies, liquidation of which is provided for by the Dominion "Winding-up Act";

(b) Farmers and persons engaged chiefly in the tillage of the soil, to whom bankruptcy proceedings would in some years be manifestly unfair, and

(c) Wage earners whose yearly income does not exceed say $1,500 or $2,000.

The voluntary procedure should, however, apply to all persons, firms and corporations.

This article has not dealt with the many strong reasons why Canada should have a Federal bankruptcy act for these have been fully discussed and considered during the past twenty years, both in and out of parliament, and the writer has assumed that all business men realize the absolute necessity for this legislation.

The object of this article is to point out the need for simplicity in matters of procedure and to advocate the passing of an act which will in actual practice be satisfactory to and have the hearty support of all commercial interests.

Review of Conditions in the Mortgage Loan Field

Payments of Principal and Interest Good—Maturities and New Money—Experience With Foreclosures Varied—Demand for Money is Small—Moratorium Acts Unsatisfactory—Values Are Well Maintained—Future of Interest Rates.

The usual annual investigation has been conducted by The Monetary Times in regard to conditions in the Canadian mortgage loan field. The results are summarized in the following articles:—

DEMAND FOR MONEY IS SMALL

Rural Credits Schemes—Loans on Western Farm Securities

A small demand for mortgage money is the general report of the companies. The general manager of the Huron and Erie Mortgage Corporation, of London, Ont., for example, says that the demand for funds during the past year has been extremely light, and "we have no substantial reason to believe that there will be any great demand for mortgage loans in the immediate future. So far as city loans are concerned, the reason is obvious, little or no building activity. It is difficult to determine the chief reason the farmers are not seeking loans, but it seems to us that prosperity is the answer. This applies particularly to the old established farming districts, where the farmers are experiencing very little difficulty in negotiating temporary loans.

"In Saskatchewan and Manitoba the government loaning to farmers is no doubt having an effect on the number of applications being offered to loaning institutions, but the fact that there is little demand for funds in Alberta, where the government has not yet commenced loaning, would seem to indicate that the demand in the West is, generally speaking, small. True it is that Saskatchewan and Manitoba have received numerous applications under their rural credits schemes, but it must be borne in mind numbers of such emanate from districts not favored by corporate lenders."

Fairly Good in Ontario.

Mr. D. M. Cameron, treasurer of the Hamilton Provident and Loan Society, Hamilton, Ont., reports that the demand for funds in Ontario has been fairly good, but very limited in Manitoba and Saskatchewan.

In Quebec province the Trust and Loan Company of Canada reports the receipt of a fair number of applications for loans, but only a small number of these materialize. There appears to be a good deal of local money seeking investment at 7 per cent. or less on desirable security.

Outlook in the West.

Mr. W. A. Windatt, managing director of the Home Investments and Savings Association, Winnipeg, says: "Owing to the very light immigration and the continued absence of so many of our young farmers at the war, the demand for money has been very light and investments by way of mortgage loans difficult to secure. What loaning has been done has been practically all on farm securities as building developments in the cities and towns in the prairie provinces are largely at a standstill. There is no doubt but that the loaning business will be quiet until after peace is declared and conditions return to normal. I have great confidence in the prosperity of the western provinces when this period arrives. Our immense areas of untilled land of the best quality cannot but attract the attention of great numbers of people in Europe who have become well acquainted with the name of Canada through the heroic achievements of our overseas forces, and a large movement to this country is certain as soon as conditions make it possible."

Mr. V. B. Wadsworth, manager of the London and Canadian Loan and Agency Company, of Toronto, says that the demand for money on mortgage account has declined considerably, and applicants for loans on western farms expect a reduced interest rate.

MATURITIES AND NEW MONEY

Higher Rates Had to be Paid — Experience with Sterling Debentures

The loaning companies' experience in regard to maturities and new money last year has varied. The demand for new money generally was light. A company doing business in the maritime provinces reports that most of their debentures last year were renewed, but they had to pay an increased rate. "We are paying for debentures 5 per cent. to 5½ per cent.; 5 per cent. for debentures running for one year; 5¼ per cent. for debentures running for two years and 5½ per cent. for debentures running three to five years. We have got no new money from the other side of the Atlantic and very little new money from this side. Our debenture account is about stationary. The new money coming in about balances the debentures we have to pay off. The debentures not renewed and the deposits withdrawn have largely gone into the Dominion war loans."

Mr. A. A. Campbell, managing director of the People's Loan and Savings Corporation, London, Ont., reports that debentures maturing were practically all renewed and some new money received for investment.

The Trust and Loan Company of Canada states that in Manitoba they have been quite successful in obtaining renewals.

In Quebec Province.

In Quebec generally, borrowers were quite prepared to renew, provided the rate is not over 7 per cent. "Where we ask a higher rate than this, the borrower is likely to endeavor to do better before deciding to renew with us." In Saskatchewan, the same company's experience is, that borrowers showed less readiness to renew and that the demand for new money was light.

"Our sterling debentures were fairly well renewed," says Mr. V. B. Wadsworth, manager of the London and Canadian Loan and Agency Company, Toronto, "but at an increased interest rate, and very little new money was obtained."

Renewals of maturing sterling debentures, or an equal amount of new money, could have been secured without difficulty, had the company been prepared to pay the high rate of interest demanded by lenders in Great Britain, reports Mr. D. M. Cameron, treasurer of the Hamilton Provident and Loan Society, Hamilton, Ont.

Renewed at Five per Cent.

"Our records show that our Canadian debentures maturing during the past year have been renewed equally as well as in former years," writes the general manager of the Huron and Erie Mortgage Corporation, of London, Ont. "Early in the year our directors decided against increasing the rate offered for renewal of sterling debentures, as it was thought unwise to attempt to compete against the very attractive rate being offered by the British government. As a matter of fact it is surprising to note that about 30 per cent. of our maturing debentures in May have been renewed at a 5 per cent. rate. Perhaps the outstanding feature of our borrowings during the year (including both the Canada Trust Company and the Huron and Erie) is the increase in Canadian borrowings, which more than offsets the heavy repayments made to Scottish investors. When one remembers that bonds of the Dominion and of the various provinces can be purchased to yield a higher interest return than we offer, this substantial increase in our Canadian borrowings can be more fully appreciated. The great campaign in connection with Canada's Victory Loan will, of course, materially affect the borrowings of financial institutions."

Another company writes: "We really have made very few loans of the mortgage type during the year, our investments being to a great extent confined to bonds. As regards maturities, our business being of a limited extent, our personal experiences have hardly been sufficient to warrant an opinion as to general conditions. We have had one or two loans, however, paid off before their maturities, by parties who, being commercially interested, had done sufficiently well in their business to permit them to pay off their loans.

"As regards new money, our own experience would indicate but a small demand for it. We have always been prepared to consider any favorable applications in this district, but have had very few. We have discontinued making new mortgage loans in Manitoba since the war started, and even though in Saskatchewan we have good machinery for the handling of farm loans, we have only had one or two applications within the last six or eight months. These features, together, of course, with the necessity of keeping ourselves in a strong, liquid condition, are responsible for our having directed our moneys so extensively to various types of bonds which have been offering exceptional yields."

PAYMENTS OF PRINCIPAL AND INTEREST

High Prices of Farm Products Has Helped to Make Good Record

Payments of principal and interest during the past year were good. One company, for example, reports a perceptible improvement in payments. Their loans are distributed throughout western Ontario, including Toronto, and the provinces of Manitoba (principally in and about Winnipeg), and Saskatchewan, the latter consisting of a few loans in Regina and Moose Jaw, taken three or four years ago, and a number of farm loans taken within the last year. Business conditions in Ontario being rather favorable, the effect on interest payments has been such as to leave little to be desired. Practically all of this company's Ontario loans are of a class which insures rather prompt attention in the matter of interest, covering, principally, urban properties. "We have not been asked, unexpectedly, to accept any great amount of principal moneys, which might be experienced by some of the other companies whose loaning operations were more or less centred on farm properties.

"Apart from Ontario, possibly the larger proportion of our other loans are in Winnipeg, and as mentioned before, a perceptible improvement is noticed, although a number of our loans covering properties of a more or less smaller type do not, perhaps, show so noticeable an improvement as is experienced by companies whose loans cover more expensive real estate properties or business structures, whose owners' ability to meet the interest and principal payments depend more on the commercial prosperity. A number of our loans are on workmen's houses, and for some time there were considerable vacancies in tenancies, leaving the owners in more uncertainty as to their ability to pay, than in the other type of loan referred to. Now, however, we have practically no property untenanted, and that when real estate conditions improve beyond their present conditions, and when houses become more and more scarce, the cheaper type of workmen's homes such as we refer to, and a few of which we have mortgages against, will become more in demand, and should easily bring, as our western correspondents lead us to believe, purchase prices considerably in excess of the mortgage amounts against them. Generally speaking, we notice a marked improvement in this respect."

In Western Canada.

Speaking for western Canada, Mr. W. A. Windatt, managing director, Home Investments and Savings Association, Winnipeg, says: "The payments on account of farm loans have been very satisfactory and those on account of mortgages on city and town properties as much so as could be expected under the circumstances."

The manager of another company doing business in the west, says: "Payments of interest have been met about as well as in the previous year. We had to carry a number of farmers over for their interest on account of the crop failure in many districts in Manitoba during 1916." In Quebec province he says that payments of principal and interest have not shown any indication of irregularity. In Saskatchewan, the same company's experience has been normal payments of interest. Payments of principal have been unusually large.

Lower than Average.

Mr. C. V. Smith, general manager of the Saskatchewan Mortgage and Trust Corporation, Regina, reports that payments on mortgages last season were regular and in most cases, especially on farm mortgages, payments of principal and interest were promptly made. Borrowers on city securities were able to meet their interest rates regularly, but the return of principal was lower than the average.

The general manager of the Huron and Erie Mortgage Corporation, London, Ont., says: "Our experience during the past year, shows that maturing payments (both principal and interest) have been met with more regularity than at any time since the outbreak of war in 1914. This very satisfactory condition is particularly noticeable in connection with the farm loans, and is explained by the fact that the farmers have been receiving high prices for their products. Heretofore, a rural borrower has been struggling along under a heavy floating indebtedness, but the prevailing high prices of farm products has enabled the farmer to reduce, and, in many cases, to discharge fully such obligations. This has directly affected the loaning institutions as the ability of the farmer to meet maturing mortgage payments has been correspondingly increased.

In Good Standing.

"We venture the statement that maturing payments in connection with city loans have also been met more regularly than at any time during the past three years, although we realize the experiences of some other institutions may differ from ours. So far as the province of Ontario is concerned, we believe the majority of representative loaning corporations will agree that city loans are in satisfactory shape. Our loans on city property in the prairie provinces are in good standing, but we have only a limited amount invested in this manner."

MORATORIUM ACTS AND LOANING

They are Apt to Defeat the Purpose for Which Framed

"Fortunately we have no moratorium laws in our province, and we have refused to loan in any province where a moratorium law exists." That is the statement of the manager of one of our loan companies and really typifies the antipathy of the loaning corporations to the unfair legislation which exists in some of the provinces.

"Our only experience with the moratorium laws has been in Manitoba, and we have two or three instances in connection with our Winnipeg properties," writes another manager. "While every measure should be taken to protect the men who offer their services for their country, and to protect their dependants at home, it would appear to us that in some cases, at least, the moratorium act in Manitoba, which is really the only one that of which we can speak from experience, is more apt to defeat the very purpose for which it was originated, and cause hardship rather than benefit to the mortgagor. In some cases men will return from the front, and after the lapse of the interval protecting them against proceedings, will be confronted with considerable burdens attached to the properties in which they have previously been interested, and unless property values have taken a very marked advance over the present, the owners will be unable to realize sufficient to meet the mortgage and the accumulated charges, and will possibly be confronted with personal covenant obligations as well. If they are worth insufficient to meet any differences to the mortgagees between the accumulated charges and the selling prices, the mortgage companies will naturally lose money, and the mortgagors themselves, if they are worth anything, will lose, so that, applying the problem to certain instances, we would judge that no benefit will arise as a result of the moratorium.

"Of course this position is aggravated the longer the war continues. We have no doubt that some precautions were necessary, but we believe that some conditions that exist at present might be changed to the benefit of both parties. As they do stand, it might have been possible for a company whose loaning operations had been confined almost exclusively to, say, the province of Manitoba, to have found themselves, as a result of the war and moratorium acts, descending from a state of strength and security to one of insecurity, by reason of their inability to collect payments from those interested in the properties, that had enlisted for service. This might be an extreme reference, but not an impossibility. We believe that, as a general rule, the loan corporations have not experienced the volume of trouble which, possibly, they had anticipated when the acts were first made."

Mr. A. A. Campbell, managing director of the People's Loan and Savings Corporation, of London, Ont., reports that there does not seem to be as great a desire on the part of borrowers to take advantage of the moratorium act in Ontario.

Is Bad Legislation

That the provincial moratorium laws have been bad and the longer the war lasts, the more serious will be this legislation, is the opinion of Mr. C. V. Smith, general manager of the Saskatchewan Mortgage and Trust Corporation, of Regina. "It is true," he says, "that amendments have been made from time to time which have somewhat improved the situation, nevertheless, there are loans upon city property especially where no interest can be collected and no return can be obtained whatever until new legislation is introduced or the mortgagor voluntarily gives assistance."

Mr. W. A. Windatt, managing director of the Home Investment and Savings Association, of Winnipeg, thinks the moratorium laws in Manitoba and Saskatchewan are, as fair as legal acumen can make them, though there are always some undeserving people who take shelter under the protection of a law made for those entitled to relief. "Conditions in Alberta are unsatisfactory," he adds. "The practical wiping out of the personal covenant in a mortgage which formed part of the security (and often no inconsiderable part) at the time the loan was made, was unjust. Besides this, the delays and obstructions met with at every turn a loan company encounters in the courts of that province are very discouraging."

Without Sufficient Forethought.

The general manager of the Huron and Erie Mortgage Corporation, of London, Ont., writes: "We do not appear to be suffering materially as a result of the various moratorium laws in force in the provinces in which we are operating, with the exception of the Volunteers and Reservists Relief Act of Alberta. Articles that have appeared in *The Monetary Times* have shown that that paper recognizes this piece of legislation as being iniquitous, and it is, therefore, quite unnecessary for me to comment on this act. Of course, occasionally one finds a borrower who endeavors to take an unfair advantage under moratorium laws, but such cases are isolated. All of these laws protect a soldier's property until one year after the war. Some borrowers have been known to transfer an interest in mortgaged property in order to gain protection, but as stated before such cases are isolated.

"We quite appreciate the fact that it is a very difficult matter to construct legislation that will provide full protection for those it is designed to protect and at the same time leave no loop-holes for unscrupulous borrowers. However, it is an acknowledged fact that the moratorium laws in the western provinces were prepared without sufficient forethought, and for one reason or another some of our legislators in western Canada are disinclined to support the necessary amendments. At the present time great pressure is being brought to bear upon the members of the Alberta legislature, and it is confidently expected they will amend the Volunteers and Reservists Relief Act at their next session, in order that it will, as was originally intended, protect only the bona fide soldier."

Are Very Objectionable.

That provincial moratorium laws in the western provinces "are very objectionable and a serious bar to loaning operations," and that little difficulty has been experienced in Ontario, is the report of Mr. V. B. Wadsworth, manager of the London and Canadian Loan and Agency Company, of Toronto.

Mr D. M. Cameron, treasurer of the Hamilton Provident and Loan Society, makes a similar report. "In the west," he says, "the moratorium laws and the many other provincial enactments, have given endless trouble to lenders, and have not, in our opinion, in any way assisted the deserving borrower."

VALUES ARE WELL MAINTAINED

Farm Values Helped by War Prices—City Properties Remaining Firm

"Farms are not likely to decrease in value while farm products command war prices. City properties do not find ready purchasers at former prices. There does not appear to be much money seeking investment in Montreal real estate at the present time." This is the report of the Trust and Loan Company of Canada, so far as Quebec province is concerned. The same company reports that in Saskatchewan there has been very little change in values of farm and city properties during the past year. In Manitoba, there has been very little change in the value of farm property. In the city of Winnipeg conditions remain about the same, though the encouraging features are that there are not many vacant houses, that there has been a slight increase in rents, and that the demand for suites in apartment buildings is keen.

"The conditions surrounding property values in city properties show a distinct improvement," reports Mr. W. A. Windatt, managing director of the Home Investment and Savings Association, Winnipeg. "The fact that at a recent unrestricted sale of vacant lots in the best residential district in Winnipeg, every parcel was sold and at prices, though not top notch, still at good figures, and the fact that the total amount realized was in excess of half a million dollars indicates the confidence in the future held by the one hundred and thirty odd purchasers of these lots."

Values of City Properties.

The general manager of the Huron and Erie Mortgage Corporation, London, Ont., says: "The trend of farm property values has been decidedly upward, particularly in the prairie provinces where farm land has been, and still is, valued at reasonable figures. In Ontario, city property values have, generally speaking, remained firm. A couple of years ago, there were numerous vacant dwellings in our Ontario cities with the result that values were commencing to drop. To-day, on the contrary, there is a brisk demand for city dwellings, hence, the values are remaining firm. Unfortunately, the city property values in some of our western cities were placed at unreasonable figures in pre-war days, and those who allowed their enthusiasm to get the better of them are now suffering the consequences. The municipal debts of some of our western cities are causing some anxiety these days, but those responsible for the present conditions have learned their lessons well, and we feel confident that they will all eventually make good."

In Ontario Cities.

Mr. V. B. Wadsworth, manager of the London and Canadian Loan and Agency Company, Toronto, reports as follows: "Farm properties in the western provinces are maintaining their value, and there is not much change from last year, and the same conditions prevail in Ontario. City of Toronto property maintains also about the same value as in 1916, but rents are increasing. Other cities in Ontario report an improvement in values. Cities in the western provinces are in about the same position as to property values and rentals as Toronto."

A similar report comes from Mr D. M. Cameron, treasurer of the Hamilton Provident and Loan Society, Hamilton, Ont., who says: "Values of good farm lands both in Ontario and the west, and centrally situated city properties in Ontario, have not depreciated to any extent. There has been a depreciation in some western cities and towns where values were unreasonably high."

Are Below Normal.

Another Ontario loan manager writes: "As regards farm properties, real estate in western Ontario has remained more or less steady for some time. As a matter of fact, but few farms change hands around here, as compared with some other districts. We have an excellent type of farmer in Waterloo County, for example, and it can easily be said that we have one of the best cultivated farming districts in the province. The prices of same remain fairly stable. As regards property values in the urban centres here, real estate operators state that a noticeable improvement is appearing, more particularly as regards the cheaper and medium-sized houses. We have very few for rent, and there are more changing hands than there have been for the last two or three years, although of course conditions are still below normal in real estate lines."

In the city of Halifax values of real estate have increased. This, no doubt, has been caused by that city being the base of naval operations in the North Atlantic. Farm values have shrunk a little in that district. The value of town property outside of Halifax has increased in value owing largely to the increased cost of building.

Mr. A. A. Campbell, managing director of the People's Loan and Savings Corporation, of London, Ont., writes: "Our operations are confined largely to loans on city properties. Values have slightly decreased, although in one or two of our loaning points prices of real estate have actually increased and even at this increased price ready sales are being made."

FUTURE OF INTEREST RATES

Effect of War Loans on Mortgage Companies' Business—Views of Some Officials

"There is such a variety of opinion as to the probable future trend of interest rates, that we hesitate in hazarding any personal expressions on the matter," writes the manager of a loan company. "Undoubtedly, the duration of the war will have a considerable bearing, and as none of us are sufficient prophets to be able to forecast the final ending of hostilities, the question is more or less problematical. The longer the war, the greater the government borrowing for war purposes, and as a Canadian government bond should be our premier security, and as each offering to the people is made at a slightly higher yield, the effect on the minor securities is obvious. They cannot be expected to maintain their normal status, and consequently their prices are cheap, and interest yield considerable. These conditions are reflected in the mortgage interest rates. Bonds are easier to handle, and so, if good municipals and even provincials can be purchased at prices yielding 6 per cent., and better, mortgage rates will likely tend a half to one per cent. higher."

May be Further Increase.

That interest rates will continue as at present with a probability of a slight increase on city property, is the opinion of Mr. C. V. Smith, general manager of the Saskatchewan Mortgage and Trust Corporation, Regina. "We do not regard the various legislation made by the provincial governments with reference to securing cheaper money as a detriment to loaning operations by mortgage companies in this country. It is not probable that the governments will be in a position to loan money much more cheaply than the mortgage companies. They will, undoubtedly, experience difficulty in selling their bonds at 5 per cent. and we do not consider the Saskatchewan greater production loan has been offered at a very opportune time. We believe that if money is available for bond investment to-day, it should be placed in Dominion war bonds and used for the purpose of carrying on the war successfully."

Supply and Demand.

Discussing the future interest rates, the general manager of the Huron and Erie Mortgage Corporation, London, Ont., writes: "At times we endeavor to figure this problem on theory, and deceive ourselves into believing that interest rates will take a sudden drop along with the prices of many commodities, just as soon as peace is declared. We cannot, however, figure this out purely on a theoretical basis, but must adhere to the old practical basis of supply and demand. The enormous demand for funds to-day for the purpose of carrying on the war is being met most admirably by the financial institutions of the country, and in spite of the fact that investments in bonds have been exceptionally heavy, the supply of funds available for mortgage loans is now much greater than the demand. However, the demand at present is extremely light.

"If there is great commercial and industrial activity in Canada immediately following the cessation of hostilities in Europe, as we prefer to hope, there will likely be an enormous demand for money, with the result that the amount available for investment in mortgage loans will be limited, and will create a stiffening in rates of interest. Some may argue that the government rural credits will compel loaning corporations to reduce interest rates, but we do not anticipate this. In the western provinces, the adverse legislation renders a reduction in rates, almost prohibitive; in fact it has had, and is having, the effect of driving capital out of the country. When mortgages are reinstated to their original standing as first charges, and the confidence of mortgagees consequently restored, there will be a great deal less discrimination between the east and west in the matter of rates of interest.

Increase and Decrease.

Although money obtained on debenture and deposit is dearer, interest rates on mortgages are somewhat decreasing, especially in the western provinces. These conditions, in the opinion of Mr. V. B. Wadsworth, manager of the London and Canadian Loan and Agency Company, Toronto, will not change till the ending of the war.

"Interest rates," says Mr. D. M. Cameron, treasurer, the Hamilton Provident and Loan Society, Hamilton, Ont., "are in a rather peculiar position, for while the rate on borrowed capital continues to increase, the rate obtainable on first-class investments is decreasing all the time. The rate obtainable on Manitoba mortgages is practically the same as that prevalent in Ontario."

"Owing to the present high prices for materials and the scarcity of labor the demand for loans will be considerably decreased." Such is the opinion of Mr. A. A. Campbell, managing director of the People's Loan and Savings Corporation, London, Ont. "Again, the Victory War Loan offered to the Canadian investing public absorbed a great deal of money which might otherwise have been invested in buildings and mortgage loans and, indeed, the offering of such war loans necessitates loan companies in carrying very much larger cash reserves to provide for their depositors withdrawing to invest in war loans."

FORECLOSURE EXPERIENCE VARIED

Most Companies, However, Were Satisfied—Leniency to Borrowers

That the number of foreclosures has not been at all exceptional, and successful sales have been made, is the report of Mr. D. M. Cameron, treasurer, Hamilton Provident and Loan Society, Hamilton. This is the general experience.

"We have made," says another correspondent, "possibly seven or eight foreclosures this year, in several cases properties in Winnipeg, and in the other cases two or three properties in Regina. In one or two cases we have been successful in making transfer without loss. In the other cases, we have no reason to expect losses, with the exception of possibly two or three properties against which we happen to hold additional securities which should protect us. The amounts are so small, however, as not to give us any concern."

Borrowers Got False Impression.

Mr. A. A. Campbell, managing director of the People's Loan and Savings Corporation, London, Ont., writes: "The number of sale proceedings taken last year were less than the preceding year and there seems to be more of a disposition among borrowers to make an effort to keep up their payments. The Borrowers Relief Act gave the borrowers a false impression and, in many cases, had a tendency for borrowers to procrastinate and put off, when by making a little effort they would have been quite able, in the majority of cases, to keep up their payments. They appeared to be possessed of the idea that by deferring payment on their mortgages they would have more money on hand for their general living expenses.

"Sales were not effected when properties were put up for sale by public auction but over 50 per cent. of the properties so offered for sale, were subsequently purchased privately."

Here is another eastern company's experience: "We had four foreclosures last year; two of them sold under foreclosure brought more than we had against them, the other two were for smaller amounts and we had to bid them in, but probably will sell them for the amount we have against them. The foreclosures last year were smaller than usual."

The Trust and Loan Company of Canada reports that in Manitoba the number of cases in which properties were brought to sale and in which the company foreclosed, were rather larger last year, but they were fairly successful in making sales. "It is difficult to sell properties in the city of Winnipeg even at greatly reduced prices." In Saskatchewan, the same company had fewer foreclosures last year and the sales were good.

In Quebec, the Trust and Loan Company of Canada reports that the number of sales by the sheriff was exceptionally large and the prices were not satisfactory. In most cases the property passed into the hands of creditors.

Mr. C. V. Smith, general manager of the Saskatchewan Mortgage and Trust Corporation, Regina, reports that a number of foreclosures last year was small and in each case a successful sale was made, especially on farm property and small modern city residences. Where the entire principal of a mortgage became due, the company had no trouble in securing a renewal of the mortgage.

Leniency to Borrowers.

"Contrary to expectations, the number of foreclosures during the past year has been exceptionally small," writes the general manager of the Huron and Erie Mortgage Corporation, London, Ont. "During the first two years of the war many borrowers were unable to meet maturing payments, and, like other loaning institutions, we were compelled to face what was apparently a serious situation. We, however, decided on a policy of consideration and leniency toward the borrower, and consequently took sale proceedings only in those cases where it was apparent the mortgagor was involved beyond hope of redemption. This course has been fully justified, as many of our delinquent borrowers have paid arrears in full and are now in good standing. Sales of good farms have been made without difficulty, and in the east the few city properties which came into our hands were promptly disposed of without loss."

Mr. V. B. Wadsworth, manager of the London and Canadian Loan and Agency Company, Toronto, reports that foreclosure proceedings were less than in 1916, and sales thereunder were quite satisfactory and generally exceeding the mortgage claim.

WAR SAVINGS CERTIFICATES

Canada Sold Over $12,000,000 Last Year—Other Countries Selling Them

War savings certificates were first offered in Canada in January, 1917, the lowest denomination then being $25. In August, $10 certificates were issued. Up to December 1st last, 189,020 certificates, valued at $12,226,340.50 had been sold, a splendid record. The details have been supplied to *The Monetary Times* by Mr. S. T. Bastedo, superintendent of the government annuity department, Ottawa, as follow:—

War Savings Certificates Issued by Finance Department to December 1st, 1917.

Denominations.	Number of certificates.	Amount.
$10	3,587	$ 30,848.20
$25	32,146	691,139.00
$50	13,484	579,812.00
$100	93,745	8,062,070.00
Total	142,962	$9,363,869.20

Issued at Post Offices.

Denominations.	Number of certificates.	Amount.
$10	1,453	$ 12,495.80
$25	11,357	244,175.50
$50	5,896	253,528.00
$100	27,352	2,352,272.00
Total	46,058	$2,862,471.30
Total number of certificates issued		189,020
Total amount received therefor		$12,226,340.50

The certificates are issued in four denominations—$10, $25, $50, and $100—and run for three years from the date of purchase. The prices are $8.60, $21.50, $43, and $86 respectively—that is to say, for every $8.60 lent to the government now, a certificate entitling the holder to $10 at the expiration of three years is received. The discount is equivalent to an interest rate of over 5 per cent. compounded half-yearly. Individual purchases are limited to $1,500. The following table shows the return to investors:—

Amount lent now.	Becomes in 3 years.
$ 8.60	$ 10.00
21.50	25.00
43.00	50.00
86.00	100.00
430.00	500.00
860.00	1,000.00
1,290.00	1,500.00

May be Surrendered.

The certificates may be surrendered at any time before the end of the three years, if the money is needed, on the following basis:—

Certificate of	$10	$25	$50	$100
During first 12 months at	$8.60	$21.50	$43.00	$86.00
After 12 months but within 24 months at	8.90	22.25	44.50	89.00
After 24 months but within 36 months at	9.30	23.25	46.50	93.00

Each certificate is registered at Ottawa in the name of the buyer, and if lost or stolen, is valueless to anyone else.

In Great Britain.

The sale of war savings certificates has been adopted in Great Britain and the United States, the former country probably being the first belligerent to sell them. A feature of these certificates was made in Britain's Victory Loan campaign in February, 1917, when 5,911,000 subscribed to these securities, purchasing a total of £19,300,000, or about $96,500,000. Substantial sales are made every week. During the first week of October last, for instance, the sales totalled £850,000, or approximately $4,250,000. In England, the sale of war savings certificates has proved remarkably successful, not only in raising considerable funds for the government, but in fostering the habit of thrift among the people. Up to October 31st, 1917, about $450,000,000 had been raised there through the sale of certificates. This is in addition to other sums advanced to the government by small investors. From the outbreak of the war to the close of 1916, the sums invested with the British government by small investors, excluding war savings certificates, amounted to $600,000,000. There are over 35,000 war saving associations in England alone.

In the United States.

The bond bill passed by the United States Congress in September, 1917, provided for the issue of $2,000,000,000 war savings certificates. These certificates are issued from time to time, run for five years, and are sold in denominations as small as $5. They can be bought at the treasury, subtreasuries, post offices, internal-revenue offices, customs offices, and through such other agencies as may be designated from time to time by the secretary of the treasury. The plan of distribution comprehensively covers the entire country, and the certificates are available in every city and town in the United States. It was proposed to develop the plans in such a way that savings may be made through the purchase of stamps of small denominations which can be carried in books issued for the purpose, and accumulated until a sufficient amount has been saved to purchase a war savings certificate of, say, $5, bearing interest at the rate of 4 per cent. compounded quarterly on the purchase price, payable at maturity. A similar innovation was introduced in Canada last year.

The United States government will redeem the war savings certificates at any time before maturity upon request of the holder, allowing interest at a less rate than 4 per cent. The certificates will be issued on the basis of $4.12 for a certificate redeemable in five years for $5.

At Compound Interest.

The first certificates were issued on December 1st, 1917. The decision to issue war savings certificates at $4.12, redeemable in five years for $5, means that the certificates will bear interest at the rate of 4 per cent. per annum, compounded. Great Britain is selling her war savings certificates at 5 per cent. compound interest. The British certificates are sold at 15s. 6d., and are redeemable in five years at £1

a Regular rate 7% cumulative. In arrears since July 1, 1914. *b* Regular rate 7% cumulative. In arrears since July 25, 1914. c Dividend is cumulative. *d* Detailed balance sheet not given. *e* Regular rate 7% cumulative. In arrears since July 1, 1913. *f* See Dominion Steel Corporation. *g* Dividends from April 1st, 1915, to January 1st, 1917, in arrears. *h* On basis of last 6 months' earning statement. *i* On basis of last 9 months' earning statement. *j* As December 31, 1916. Company has now excess of current assets through sale of $2,500,000 common stock at par. *k* Initial dividend declared September 10. *l* Company earned 40.7%, but appropriated $62,500 for the amortization of its munitions plant and equipment. (3) Average earnings for three years only. (4) Average earnings for four years only. ‡ Excess of current liabilities over current assets. * To Nov. 24th, 1917. x Company also paying a bonus.

The following information is given in regard to each issue:—

(1) The amount of stock outstanding.

(2) The ratio of current assets to current liabilities. Current assets include all those items on a company's balance sheet which do not represent a permanent investment and which can be converted into cash readily. The items include cash, bills and accounts receivable, goods and material on hand for current working purposes, investments in saleable stocks and bonds, etc. Current liabilities are those debts which have not a definite far-off maturity, and which a company is being or may be called upon to pay at any time. They include bills and accounts payable, accrued interest and dividends due during the current period, bank loans and early maturing notes and other obligations. Every company should always have a large excess of current assets over current liabilities. If the ratio of current assets to current liabilities is less than 100 per cent., it is evident that the company owes more in current obligations than it has in current resources. In other words, it has no working capital, and is faced with the necessity of doing more financing or of building up its working capital out of earnings.

(3) Ratio of working capital to par value of stock. This item gives some measure of the amount of working capital owned by a company in proportion to the issue of stock considered.

(4) Average income applicable to stock for last five years. This income is figured after all prior deductions for all obligations senior to the particular issue considered have been deducted. Too many stock purchases are made on a basis of current earnings only. Equal attention should be given to the average of earnings over a period of at least five years wherever possible, as a company's prosperity may be merely due to temporary conditions.

(5) Percentage earned on stock in last fiscal year. This is the same item as that considered in (4), and is taken from the latest earning statement made public by the company.

(6) Percentage earned on market price of stock. Items (4) and (5) represent earnings in percentage on the par value of the stock. This item represents earnings in percentage on the market value. As one is buying a stock at its market value and not at its par value, it is obviously illuminating to know the earnings as compared to the price which one is to pay.

(7) Approximate market price. This represents the approximate price at which the stock could be bought on the market at the time this analysis was issued. This price is subject to change.

(8) Dividend rate. The amount in dollars per share per annum which the company is currently paying in dividends.

(9) Yield on market price. The actual income per annum in percentage of the amount invested per share.

(10) Dividend dates. One month is given with the sign "Q.", indicating quarterly, or "S. A.", indicating semi-annually. Thus, if the dividend date is given as January 1st, Q., it means that the dividend is payable January 1st and succeeding quarters, i.e., April 1st, July 1st and October 1st

(11) Range of market price. These columns give the highest price and the lowest price at which transactions were made on the stock exchange. The first column is for the year 1917 to the date of the compilation of this analysis. Second column shows the highest and lowest registered at any time during the years 1913 to 1916, inclusive.

These statistics are compiled from sources which are considered reliable, but they are not necessarily guaranteed.

Authorities are divided as to the future of interest rates. Briefly, one view is, "that wealth is being consumed and destroyed abroad in enormous volume, and that the longer the war keeps up the greater will be the impoverishment of the European nations, and because of the destruction of property and wealth in Europe there is bound to be an enormous demand for capital for reparation. Consequently, there will be a tendency toward higher interest rates, which tendency will be maintained for an indefinite period." The other view is, "that the quiet, but extensive, liquidaton which has been going on in recent years, the cessation of new enterprises and the marked caution followed in every direction in the matter of improvements and new developments are all having a most vital influence in lowering the average interest rate, and that this condition is likely to continue, regardless of whether or not we witness a fair revival in industrial activity."

DOMINION LOAN IN UNITED STATES LAST YEAR

Canadian Government Has Raised $215,000,000 There Since War Commenced

The Dominion government loan floated in the United States in August, 1917, a loan of $100,000,000. This was the only such loan made in that market last year, and was the third made there since the beginning of the war. Our federal loans in the neighboring market to date have been as follow:—

Issued in	Amount.	Term, years.	Rate %	Issue price.
July, 1915	$25,000,000	1	5	Par
July, 1915	15,000,000	2	5	99½
March, 1916	25,000,000	5	5	99.56
March, 1916	25,000,000	10	5	97.13
March, 1916	25,000,000	15	5	94.94
August, 1917 ..	100,000,000	2	5	98

Prior to the war, the Canadian government had not financed in the United States. Since that country's entry into the struggle, it has been possible to market only very few of our issues there, as the United States war loans have been practically dominating the situation since April last. The loan to Canada last year was the first foreign government transaction undertaken since the entrance of the United States into the European war. It was first thought that the United States might make advances to Canada just as it had given credits to Great Britain, France and other enemies of Germany, but when it was found that the government at Washington was not disposed to lend money to Canada, New York bankers were asked to do the financing. They readily consented, but pointed out that in the circumstances it would be necessary to obtain United States Treasury Secretary McAdoo's consent.

Attitude of United States.

After conferences between Sir Thomas White, finance minister, and Mr. McAdoo, in July, Mr. McAdoo stated that in view of the fact that the balance of trade between the United States and Canada was running strongly in favor of the United States, he realized that it was desirable for Canada to establish credits in the United States markets to meet the adverse balances. Therefore, he said, there would be no objection on the part of the United States government to the proposed offering, but that the United States government would have to keep control over their own situation by determining each foreign offering on its merits, and with reference to the financial condition prevailing at the time. It was important, he added, that commercial and financial relations with Canada should be conserved in every reasonable way. The transaction was for that purpose.

Cost of Loan.

As the financing was in effect a credit for the purpose of facilitating purchases by Canada in the United States the rate demanded was regarded by some as unduly high, but the pressure on the New York money market was acute, and Canada had to enter into competition with other borrowers. Secretary McAdoo had just intimated to financial New York that he would require $5,000,000,000 more money for war purposes, and both in prices of goods and of capital the tendency of manufacturers and bankers of the United States was obviously to give a preference to home demands. However, it was thought by some that Canada which during the last fiscal year purchased from that country for domestic consumption goods to the value of $664,000,000, as against only $200,000,000 purchased in return by the United States, was entitled to a measure of preferential treatment. On the other hand, United States investors who subscribed $2,000,000,000 of the Liberty Loan on a 3½ per cent. basis might perhaps reasonably object to advances made to Canada out of those funds while Canadian investors were obtaining more than 5 per cent. on their war loans.

The loan cost Canada approximately 7 per cent. The net proceeds of the $100,000,000 issue were $96,250,000. Purchasers netted 6.077 per cent. Commission and other charges amounted to about 1¾ per cent.

SIX PER CENT. MUNICIPALS

Factors of Our City and Town Borrowing and the Outlook

By H. M. P. ECKARDT.

The Canadian investment world has found the six per cent. municipal bonds an interesting subject for discussion. In numerous cases parties who formerly confined their investments largely to Ontario farm mortgages at around 5½ per cent. have turned to the issues of eastern city and county bonds yielding 6 per cent. or better. So far as security is concerned these bonds are all that can be desired and the business of investing in them and collecting the interest involves the minimum amount of expense, trouble or inconvenience. In certain respects they have decided advantages over farm mortgages yielding about the same rate. Apart altogether from the matters of security and promptness of interest payments, the bonds in selected instances give the investor assurance of receiving the stipulated annual return for periods of ten, fifteen, or twenty years, whereas the mortgage contract runs, as a rule, for a much shorter term.

Cost to Municipalities, 7 Per Cent.

The municipal bonds bearing interest at 6 per cent. and over have a great significance for the borrowing corporations. When the commissions and other expenses incidental to the marketing of the bonds are provided for, the net cost of the money to the borrowing city or town may be 7 per cent. or more; and such a high annual interest cost acts directly on the tax levies. If the amount borrowed is considerable, the seven per cent. interest cost leads straight to an increased taxation rate, unless the increase in annual interest outgo can be offset by economies elsewhere. With wages and prices of commodities high and rising under war conditions, it is difficult if not impossible to effect compensating economies in other departments of the municipality's expenditure. Then, when the taxpayers have it forcibly brought to their attention that the new loans are playing an important part in increasing their municipal tax rate, they naturally begin to question the necessity of the loans; and they see to it that the municipality does not embark on fresh projects requiring borrowed money unless the expenditures are absolutely necessary and cannot be postponed.

Winnipeg Water Board Flotation.

Following the flotation of the Winnipeg Water District at midsummer on a yield basis of 6¼ per cent., the interest rate on municipal bonds tended steadily upwards in the second half of 1917. This resulted directly from the entrance of the United States into the war. Prior to April, 1917, the American investment public took considerable amounts of our provincial and city issues, and the American financial houses participated with our own dealers in bidding for the successive new offerings. All this was suddenly changed when President Wilson declared a state of war with Germany, and the American government began to borrow heavily from its own people for the purpose of lending to the European allies and financing its own warlike activities.

Some of our provinces and cities did not at once realize the significance of what had happened; and they went on with various projects confidently believing that the bond market would soon recover. They provided for their immediate requirements through negotiating temporary loans with the banks, and the aggregate of these loans, as shown in the monthly bank returns, rose rapidly. An end came to this, however, when governmental pressure for special war credits forced the banks, to require liquidation of the temporary provincial municipal advances. As the American market was still practically closed, with no immediate prospect of re-opening, the only way this could be done was through offering the bonds to Canadian investors at specially attractive prices. Thus the special loans were reduced, and from time to time issues of new bonds, to cover expenditures that could not be postponed were successfully made. Attractive prices were in evidence on some of the older issues also—as the bond houses naturally desired to clean house in preparation for the fourth war loan and for the new year.

Assuming that the war continues with unabated violence in 1918, the prospect apparently does not indicate any material easing up of the stringency in the bond market. Evidently the American government will be obliged to continue borrowing heavily from the investment public and from the banks to finance the great military operations it has undertaken. As the American army grows and as its activities increase, the war outlays of the government will enlarge; and if the loans to the allies are kept up, American investors will be required to supply such vast amounts to their own government as to leave them little or nothing available for investment in foreign securities.

So far as our banks are concerned, it is clear that their resources will be very fully taken up with the special war credits to the Dominion government, and to the government of the United Kingdom in connection with British purchases of our foodstuffs and munitions. These special credits show a tendency to increase steadily, and even in 1917 they had crowded out some of the credits ordinarily granted to the commercial and industrial customers of the banks. The banks were obliged to ask their regular customers in many cases, to cut down their requirements. If the war credits continue to rise in 1918, the same pressure on mercantile borrowers will perhaps be more or less in evidence; and, under the circumstances, the banks will not be in condition to give large temporary loans for indefinite periods to municipalities and provincial governments, when such loans are caused by new construction work or other projects. The work may be necessary, but it is nevertheless a capital expenditure, properly covered by sale of bonds. The bankers will be obliged, of course, to provide the municipalities with the ordinary short-term credits for current expenses in anticipation of tax collections. Also probably they will have funds available for short loans on new bond issues for which a sale has been definitely arranged.

Thus it appears that new issues of bonds will require to be sold promptly in the home market at prices yielding investors good returns. No matter how carefully they conduct their finances some cities and towns will be forced to borrow by way of bond issues, and thus ensure fresh appeals to the market from time to time.

BRITISH CONSOLS RECORD

British Consols have been the centre of interesting events since the outbreak of war. Last year the highest price was 56¼ and the lowest 51. The highest price in 1916 was 61¾ in June, and the lowest 55 in December.

In 1914, the price of Consols declined on July 30th to 69, the lowest figure since 1821, when a sale was made at 68¾. The highest price in 1915 was 68⅝, and the lowest 57, reached in November after the minimum price fixed by the London Stock Exchange committee, was removed. British Consols (2½ per cent. consolidated stock) are redeemable only by purchase in the open market.

When the big British war loan was issued in July, 1915, an opportunity was given to the holders of Consols to convert their holdings into the new war loan. Consols then stood at the minimum price of 66½, fixed by the London Stock Exchange committee. The government said to the holder of Consols, "If you apply for £100 of the new loan we will allow you to convert £75 worth of Consols into £50 of the new war loan." The government thus made Consols exchangeable at a price of 66⅔. The holder had the advantage of being able to apply to the new war loan and the government relieved the holder of a security which he would inevitably have had to write down and which would probably be almost unsaleable. The government gave him instead a highly marketable security. Consol holders who wished to convert had to buy £100 of the new loan, in order to secure the option of exchanging £75 of Consol stock for £50 of the new loan.

Towards the end of June, 1915, the London Stock Exchange committee, at the instance of the British treasury, lowered the minimum price of Consols from 66½ to 65.

For the eight months ended November 30th, 1917, of the fiscal year which will close on March 31st, 1918, Canada's trade was valued at $1,855,157,821. During the eight months period of 1916 the total trade of the Dominion was $1,499,255,942. For the month of November, 1917, our trade totalled $268,541,563. For November, 1916, it was $186,066,351.

WARNING TO CREDIT MEN

Now is the Time to Make Careful Survey of Accounts and Ascertain Financial Standing of Customers

By W. A. SADLER.

In talking the other day to the credit manager of a large manufacturing company, which has a due date for a certain line of special goods it manufactures, on October 15th each year, he stated that in some years they had as high as 50 per cent. of their drafts, drawn on the above date, returned unpaid. This year only the comparatively insignificant amount of 10 per cent. were so returned.

Towards the end of November last, a large eastern cattle buyer in Winnipeg, who had just completed his summer and fall operations in western Canada, was discussing the present financial condition of the smaller towns and rural municipalities in the west. He said that about a month previously, in a small village in western Alberta, he had paid $45,000 in one day, through the local branch of the bank, to cover his purchases of livestock in that vicinity. About ten days afterward, he returned to the village, where he again met the local bank manager, who told him that $41,000 of the $45,000 had remained on deposit. He added: "That is just a fair example of what is taking place throughout the entire western country."

Farmers in the West.

Farmers in the west have been receiving high prices for grain and cattle, due to war conditions. There has been a ready cash market for all the grain and stock they could produce. The result is that there is a surplus of cash available, which augments purchases on a cash basis, from the local retail stores.

In consequence, the local dealer has been in a position to discount his bills with the manufacturer and jobber. Hence the credit men in these latter establishments are pleased with the satisfactory position of their accounts. They are selling promiscuously to every retailer and jobber who has enough assets to procure a printed letter head and to some who cannot even afford to do this, regardless of any credit rating they might obtain on such customers, and in the great majority of cases they have not been disappointed. Their losses during the current year have been, perhaps, not more than a twelfth of one per cent.

How many of these self-complacent credit men are judicious enough to realize that these conditions are due entirely to the inflated and unnatural conditions produced by the war, that the country-wide prosperity may cease at any moment by any unexpected turn in the war or by an early cessation of hostilities? With the return of normal prices and wages and with the decreased demand for staple commodities abroad, the wise credit man at that time will be he who has carefully trimmed his outstanding accounts within the margin of safety, taking advantage, in a diplomatic way, of the present war conditions, to effect that end.

During periods of prosperity our credit men are lavish in the granting of credit lines to old and new customers alike. They are careless of the information diffused periodically by such admirable and helpful organizations as the Canadian Credit Men's Associations and other kindred bodies, whose sole duty it is to protect the interests of their various members. They are even so jealous of their success in avoiding losses that they are very shy about detailing their credit experiences in particular cases through their own particular trade organizations, for the collective benefit of its members.

Beginninge of Panics.

But when unforeseen events of national or international magnitude plunges the business of the whole country into distress, they immediately rush their delinquent and slow accounts into the hands of a mechanical mercantile agency or their solicitors. The result is the very condition of affairs which they are hoping to avoid. Their debtors, suffering from a sudden cessation of cash trade, are unable to meet these urgent requests for payment. This information is quickly diffused by the mechanical mercantile agencies throughout the entire industrial world, and in a great many cases, through their avidity and that of the average collection solicitor, a series of failures and assignments are precipitated, to the detriment of the general business of the country for a long time to come.

When the end of the war is in sight, a gradual or perhaps rapid business depression may set in. All credit men, whether in wholesale, manufacturing or jobbing houses, should carefully scrutinize the intrinsic character of their outstanding accounts. Where there is the slightest doubt about the basic soundness, in the way of a safe relative proportion of actual, tangible, convertible assets to liabilities, they ought to employ those intelligent means which are available to ascertain the true financial standing of their customers. They ought to curtail or close those credits which do not bear the test. In accomplishing this in the past, they have been prone to accept second-hand information obtained by mechanical means on which to base their judgment about the lines of credit to which their customers are entitled. There never was a period in our industrial history when the credit men should insure their credit liabilities by a safe, sane, intelligent and careful survey at first hand of the intrinsic character of their open accounts. It is possible to obtain such insurance and to get this information through modern methods of credit investigations and adjustments. The shrewd credit man will not delay in employing them.

Canada's Taxation Policy will Encourage Thrift, Investment and Agriculture

"It has been officially drawn to the attention of the government that the use of the expression of 'conscription of wealth' in the debates in parliament and by public and other bodies outside parliament and by the press in its news reports has caused a certain uneasiness among those whose savings constitute a vital factor in the business and industrial life of the Dominion and are so essential to the credit and prosperity upon which our efforts in the continued prosecution of the war must largely depend. I desire to say on behalf of the government that there need exist no apprehension on the part of the public that any action of a detrimental character will at any time be taken with respect to the savings of the Canadian public. On the contrary, it will be the policy of the government in the future, as in the past, to encourage in every way possible the exercise of the thrift and economy resulting in national savings which have enabled Canada to maintain her credit and improve her economic position during the war.

"Any taxation to which it may be necessary for the government to resort from time to time will be in accordance with legitimate and established forms of taxation sanctioned by the tradition and experience of British self-governing communities. This statement, therefore, must not be understood as precluding legislation providing for income taxation upon those whose incomes are such as to make it just and equitable that they should contribute a share of the war expenditure of the Dominion."—Statement of Sir Thomas White, Finance Minister, in the House of Commons, Ottawa, July 10th, 1917.

"Canada is a country inviting immigration, and we must be careful not to create the impression that it is likely to become a country of heavy individual taxation. In this connection, I think it opportune to state on behalf of the government and as enunciating its settled policy, that in providing our war expenditure, resort will not be had to taxation upon the farms, personal effects or incomes of those engaged in our great basic industry of agriculture."—Statement of Sir Thomas White, Finance Minister, in the House of Commons, Ottawa, February 15th, 1916.

CIVIC GOVERNMENT ON BUSINESS PRINCIPLES

Municipalities Should Aim to Give Service at Lowest Cost —Administrative Board Idea

By HORACE L. BRITTAIN.

It is a mistaken notion that municipalities are merely more or less mismanaged businesses. The main purpose of business in the ordinary acceptation of the term is the earning of dividends; at least a business which does not earn dividends will not be long continued. A municipality is not run for the purpose of earning money dividends but for the purpose of rendering certain necessary community services at cost. Dividends appear in the form of comfort, satisfaction and good health. Business, therefore, is liable to certain abuses on account of the dividends it seeks, abuses which may lead to the unjust exploitation of the people. Municipal government, partially on account of not requiring tangible dividends, is liable to certain other abuses equally exasperating and causing equally unjust burdens on the taxpayer. Business and municipal government both render service to citizens. Business aims to render the service at the lowest cost to it for the sake of larger resulting profits. Municipal government should aim to produce the necessary services at the lowest cost consistent with efficient service for the sake of leaving as much of the citizen's income as possible for the citizen himself to spend.

It will be seen that as far as operating at low cost is concerned, business has an immense psychological advantage. The motive is a positive one—profits that can easily be seen and measured. The stockholder who doesn't get his dividend wants to know why at once. If the citizen stockholder were looking for cash returns from the city he would be much more insistent on economy of management. But failure in economy results in an increased tax burden—a negative not a positive return. How much of the increase is due to inefficiency, he cannot know. All he can do is to pay his tax bill and shrug his shoulders, or vice versa. He cannot even measure his intangible dividends of comfort, satisfaction or good health. He takes these as a matter of course. The managers of our municipalities, therefore, are not under the same constant and insistent pressure from the taxpayers as the managers of private business from the shareholders.

Public Attitude Toward Municipalities.

Again, too many people look upon the municipality as a fairy godmother whom it costs nothing to grant favors—favors which they would not dream of asking of a business corporation. The municipality for its own sake must make large expenditures on philanthropy and charity. Instead of recognizing that these expenditures are made in order to avoid larger expenditures, many citizens, some poor and some "malefactors of great wealth," try to get in on a good thing and receive their slice of the city's favors. The poor, but not too poor, get a hospital order to avoid a bill which they could very well pay. The man situated in the mean gets his daughter on the teaching staff on the ground that he is a taxpayer and if there are any jobs going his family should get its share. The wealthy man, on the ground that he is a great employer of labor and therefore has donated or will donate to the city many people capable of paying taxes, asks that his taxes be reduced by fixed assessment or free water—his employees and other citizens should be glad to pay the difference. Private business is not accustomed to give something for nothing.

While the problems of successful municipal management and successful business management vary, nevertheless, the same principles which when applied will produce good service at the lowest cost in private businesses will produce good service at the lowest cost in municipal affairs. A municipality is not a business, but it discharges certain functions of a business and to that extent can and should make use of those principles which have stood the test of business experience. What are some of these principles?

Dividing Legislature and Executive.

The separation of legislative and policy deciding functions from executive and policy forming functions is perhaps the basal principle of good management. A private corporation has a board of trustees, not necessarily made up of experts, who exercise general legislative control and decide on general policies initiated and brought to their attention by executive and administrative officers. They exercise control by requiring detailed and understandable reports from their paid executive officers. The private corporation has also a business executive and administrator with a staff of experts who are responsible for carrying out and administering the business under the general regulation of the board. The board does not attempt to interest itself in details of management, but holds its paid officials responsible for results. The administrative officials do not attempt to usurp the legislative functions of the board.

A similar procedure in municipal government would demand that the council (or other body elected by the people) would confine itself to passing by-laws necessary for the government of the city and deciding on matters of general policy, while the heads of departments would administer the by-laws and govern their executive actions according to the general policies laid down down by the people's representatives.

Answer These Questions.

To make the matter concrete let each reader put to himself and answer the following questions:—

1. Who in your city decides whether an applicant for a Chinese laundry license shall have it or not?
2. Who really decides where street lights shall be located?
3. Who really decides whether, say, the second clerk subordinate to the first assistant to the chief accountant of the treasury department is worthy of an increase in salary?
4. Who really decides whether the head of, say, the works department needs an office messenger boy or whether it would be better to have some higher paid official run the errands?
5. Which subject causes a more acrimonious debate in the council, a proposition to increase the salary of an assistant in, say, the health department, or the proposition to spend $500,000 to build a bridge at the expense of the whole city which will greatly increase the value of the real estate property of some citizens of the city or some other city?
6. What proportion of the time of council is consumed in deciding executive details which in a business concern would be left strictly to the executive officials?
7. If your city council confined its attention to the things within its proper province, how many hours per week would it need to give to the work?
8. If these hours were cut down to a reasonable number would, in your judgment, an abler class of candidates offer themselves for election?
9. Does the fact that a man is elected to membership in a municipal council ensure his endowment with special knowledge and wisdom with regard to the detailed administration of a city or even its general policy?

The Centralization of Management.

No business organization could permanently earn dividends under divided management or under conditions of uncertainty as to the line of authority. There might be several departments of the business each under a head responsible to the general manager and acting as a member of his cabinet. Under existing conditions many cities are practically bundles of almost independent businesses, usually rather indifferent to one another, frequently jealous of one another, and still more frequently rivals for a large slice of the funds provided out of taxation. Yet there is no effective administrative agency for co-ordinating their activities throughout the year. The Board of Control was the result, at least in part, of a desire to secure this centralized control. But the board of control has failed to accomplish its purpose for four reasons:—

1st.—The board of control is elected by the people as is the council, and is therefore not responsible to council with which, as a consequence, it is frequently at loggerheads.

2nd.—It is impossible to secure competent administrators by election. Experts in getting votes are often elected to boards of control, and only by accident experts in municipal administration.

3rd.—The tenure of office of the board of control is too short to enable its members to acquire expertness.

4th.—The member of the board of control is not dependent on his professional standing as a successful administrator of a department or group of departments.

The board of control is a crude imitation of the cabinet system. If it were really a cabinet selected by and responsible to council and confining itself to the decision of administrative policies on the advice of its permanent administrative officers and to the initiation of legislation in council, the result would be far different. There would be far greater co-ordination of departmental activities—a much nearer approach to operation on a city-wide plan. Owing to the absence of municipal parties resulting from distinct cleavages on matters of city policy, the development of the board of control into a city cabinet would seem to be improbable or impossible. If for no other reason, the non-availability of men of sufficient calibre and training to warrant their employment as business managers of large cities, the city manager form of city government is bound to be of strictly limited application in Canada for many years. This does not mean that no way which could be introduced at once can be found to effect administrative co-ordination. Every city in Canada could within 24 hours put into effective operation an administrative board by simply directing the permanent heads of departments to meet once a week for the discussion of administrative policies, for the formulation of policies for the consideration of council, for the prevention of overlapping and the securing of united action. At first this administrative board would be merely informal but the securing of co-operation depends more on common discussion and understanding than on legislation. In most cases all that would be needed to prevent action at cross purposes would be the institution of conferences at regularly occurring intervals. After being tried out for a year or two a detailed plan, based on actual experience, could be crystallized in provincial legislation.

A fair trial of the administrative board idea would provide a clear separation between the legislative, executive and administrative functions of government, and an effective provision for the continuity of general policy on the part of the city. In order to save time and avoid unnecessary details the following chart is presented which illustrates one way in which the administrative board idea might be worked out in any large Canadian city so as to centralize practical detailed management in the hands of those most liable, on account of training and self-interest, to render efficient service:—

Planning Spending Before It Is Spent.

Perhaps more money is wasted on account of improper planning or planning after the fact than in any other way. All cities are compelled by law to make annual estimates as a basis for determining the amount and rate of taxation. Few cities have real budgets which represent a definite city-wide plan of work and expenditure based on proved needs. Few cities complete their plan before beginning to execute the plan and incur the expenditure the plan calls for. In fact, some cities actually spend one-third of their annual current income not only before the money is raised but before any plan of expenditure whatever is determined on. Not only does this lead to a tremendous increase in debt charges, but it makes effective control of expenditure impossible.

The citizen can determine for himself whether his city adequately plans for current expenditure by getting the answers to the following questions for his city:—

1. Are the budget estimates for any given year prepared before that year and that year's expenditures begin?
2. Does the budget document tell how much the city owes and how much the city owns, segregating the different forms of assets and liabilities?
3. Does it tell how much it has cost or will have cost to run the city the previous year?
4. Does it tell how much more or less the city spent or will have spent on current account than it had to spend?
5. Does it tell what it is proposed to do with your money for this year as well as what it did with it last year?
6. Does it tell by departments and divisions, and with comparative figures for other years, how much of the gross income is to go to debt charges, salaries and wages, contractual services, materials and supplies, equipment, pensions, contributions and other charges?
7. Does it give a detailed estimate, with comparative information, of the amount of revenue other than from taxation?
8. Does it contain a loan fund budget setting forth how it is proposed to spend loan funds and under what circumstances loans are to be effected?

If the answer to all these questions is not "yes," the planning of current expenditures is to some degree inadequate, and to some degree the city is liable to suffer the losses which flow naturally from inadequate planning.

Raising the Money Before It Is Spent.

One prevailing cause of waste is the habit of municipalities to begin public works before debentures are sold. Sometimes it is felt that the time is a bad one in which to sell bonds and that it is better to postpone the sale until an improvement in the market. It is rarely recognized that a poor time for selling bonds is a poor time for incurring liabilities and a good time for postponing bond sales is a good time for postponing public works to be paid for out of bond sales. There are, of course, exceptions to this rule. In any case, where work is begun before money is in hand the work has to be financed by temporary loans, thus increasing the floating debt. This applies to expenditures out of the proceeds of taxation as well as out of bond sales. In the former case there is loss through unnecessary interest charges and in the second there may be loss through being finally compelled to sell bonds in a market still more unfavorable than in the first instance. It would be interesting to know how many cities, who were financing public works by temporary loans, have been greatly embarrassed by inability to sell debentures during the war period. How much better off such cities would be now if they had always followed the policy of postponing work until the necessary money was in hand?

A logical conclusion to this paper would give a statistical statement of the effect on municipal finance of disregard of

these principles. This would be possible for any one city but absolutely impossible for the country as a whole. Until we have developed in Canada uniform systems of accounts for cities of like size, and until we have reliable national municipal statistics, diagrams and charts based on nation-wide conditions will be more interesting than instructive or conclusive. Some provinces have fairly accurate municipal statistics, but there is no co-ordination between them and in many instances the information contained is out of date before publication. Canadian municipalities will be under a heavy handicap in attempting to effect economies and reforms until comparative information of national scope is available. In order to mend one's ways, one must realize whither he is going and whither his neighbors are going.

BRITISH COLUMBIA RURAL CREDITS

Loans Made on First Mortgages for Agricultural Purposes —Land Development Work

By **MAXWELL SMITH.**

The Land Settlement and Development Act, passed at the last session of the British Columbia legislature, was designed with the object of benefiting every citizen of the province by facilitating increased agricultural production. The administration of the act is entrusted to what is known as the land settlement board consisting of the chairman and five directors.

While the loaning of money to farmers for development purposes will continue to be an important feature of the board's work, the public development and settlement operations, provided for in the act, will doubtless be the most far-reaching from a financial and educational point of view, as there are many areas of unoccupied fertile lands within the province where the board may undertake extensive clearing, draining, dyking, irrigation and reclamation schemes thereby helping solve many of the difficulties with which the farmer is confronted.

Is In Co-operative Field.

It should be borne in mind that the board is not entering the competitive but rather the co-operative field, as it is the intention that both the loaning and development features of the board's work shall be made self-sustaining and conducted on sound business principles.

I am a believer in legitimate and judicious advertising of the province, with its vast natural resources and opportunities, but our first duty is to create conditions that will facilitate the profitable occupation of the land, making it possible for the farmer to earn a fair living under congenial circumstances. Then there will be no need to worry about getting people to occupy and cultivate the soil.

Notwithstanding the assertion made in some quarters that "British Columbia is not an agricultural country," I have no hesitation in saying that my knowledge of the province goes to confirm the contrary opinion, that we possess large agricultural possibilities, which may be realized through a sane and common-sense administration of a practical land development policy.

Land Development Work.

In "The Land Settlement and Development Act" I believe a good start has been made along practical lines, as the board is empowered to undertake important land development work that should revolutionize the agricultural status of the province.

The establishment of demonstration areas in different parts of the province, having a diversity of climatic and soil conditions, will not only facilitate rapid and permanent settlement on these areas, but all the information thereby obtained, as to the best and most economical methods of clearing, dyking, draining, irrigation, cultivation, etc., with accurate figures as to cost and possibilities of revenue, will be available for the benefit of private enterprise.

We should not be satisfied with the agricultural conditions of British Columbia until she is producing her own consumption of necessary foodstuffs and has begun to export a sufficient surplus of what we can grow ourselves, to purchase the luxuries we are compelled to import from other countries.

While more or less paternal, it must be distinctly understood that the land settlement board is not a benevolent institution. Its operations must be conducted on sound business principles. It is proposed to make our demonstration development schemes sufficiently revenue-producing to reimburse the government for the expenditure, while at the same time facilitating settlement under reasonably advantageous conditions.

The loaning department must also be conducted on a self-sustaining basis. Loans are made on first mortgage securities for agricultural purposes.

We thus propose to help the farmer to help himself, and the consumer in the cities should be equally interested in his success. The transportation companies should meet us halfway in the matter of freight rates and, with the hearty co-operation of all concerned, every industry and class in the province should benefit in accordance with the progress and development of our agricultural interests.

I have a very keen appreciation of the difficulties confronting the board in these abnormal times, not the least of which is the question of obtaining the necessary funds with which to operate during the present unsettled state of the money market.

MORTGAGE LOANS IN CANADA AND STATES

Some Interesting Comparisons — Assets of Canadian Companies Total $1,000,000,000

By **HUME CRONYN.**

The rural credit system of the United States is managed by three bodies—(1) the Federal Farm Loan Board, at Washington (the head office of the organization); (2) the 12 Federal land banks scattered throughout the United States (the district managers) on whom the duty falls of raising money to lend the farmer; and (3) the countless national farm associations, whose chief business it is to arrange the farmers get the money they want.

These are all, in a sense, government institutions; at least they are not created for the purpose of making a profit for shareholders, but the act itself provides for the establishment of joint stock land banks, who can enter business and compete alongside the government for farm loans. These joint stock banks will be, in very truth, replicas of our mortgage companies, save that they are not allowed to take money on deposit.

Fifteen Times Capital and Reserve.

To offset this drawback, they are permitted to issue bonds or debentures up to the amount of 15 times—not only their paid-up capital—but any reserve which they can accumulate, and these debentures will apparently be (as are the debentures of the Federal land banks) free from all taxation. There is some question about the validity of the tax exemption clause of the act, but if it is upheld it apparently applies to the bonds of both the Federal land banks and the joint stock banks.

And Only Four Times Here.

The interesting side of the situation to us in Canada is that the United States, after the most exhaustive inquiry all over the world, have decided it is safe to allow an institution dealing in farm mortgages to issue debentures up to 15 times its paid-up capital and reserve, while we in Canada are limited to once our reserve added to four times our paid-up capital.

The farm mortgage bankers of America, whose business heretofore has been conducted on quite a different principle than that of Canadian mortgage companies, are not likely to be altogether put out of business by government competition, when they can so easily turn themselves into joint stock land banks, and thus obtain the great advantages offered under the American act.

In Canada, mortgage companies have had a growth along lines different somewhat from that in the United States. For 60 years or longer these corporations have played a part in the development of Canada, and while, so far as size and profits are concerned, they are easily overshadowed by many of our financial institutions, yet they have in the main proved reliable and sound custodians of the moneys of depositors, debenture holders and shareholders alike.

Founded, in the first place, on the well-known building society basis, they soon enlarged their operations, and for a generation or more have by law been entitled to accept moneys on deposit, and to issue debentures as a floating charge against their assets. That is to say, depositors and debenture holders are preferred creditors, their claims ranking on winding up proceedings "pari passu" as between themselves but ahead of ordinary creditors, if such there be, and of course prior to the shareholders who must of necessity last share in what may remain of the assets. These borrowings are strictly limited by law and, generally speaking, cannot exceed the reserve fund added to the four times paid-up capital of the debtor company. Prior to the war the greater proportion of these debentures were marketed in Great Britain. As a rule they run no longer than five years, when they were repaid or renewed at the current rate of interest. This type of investment appealed strongly to the canny Scot, who preferred security to profit and who appreciated the opportunity of periodically reviewing the position of the concerns to whom he intrusted his funds. It is estimated that 90 per cent. of the mortgage company debentures floated abroad were placed in Scotland.

Situation Changed by the War.

As an evidence of the high opinions in which these bonds were held, our records show that a few years ago, even after paying a commission to agent and stamp tax, they could freely be marketed at a cost to the issuing company of less than 4 per cent. Since the war the situation has wholly changed, and it is a difficult matter to renew the bulk of maturing debentures in the face of the increasing demand and rates of the British government. In the meantime, Canadian investors have been educated to the advantages of these securities and some, at least, of our companies have been able to make up at home more than the shrinkage occurring abroad.

In earlier days the mass of mortgage loans was secured on farm lands, the province of Ontario being an attractive field for these operations. The opening of our western provinces synchronized with the decay of farm mortgages in the older field and absorbed a large amount of capital, while the growth of our cities called for the assistance of the mortgage lender to no small degree.

So far as we are aware, the principles adopted in mortgage lending are the same on both sides of the line, save in Canada it is well nigh the universal rule that the borrower pays no commission on his loan, whereas an agent who brings a loan to a corporate lender expects to receive, and is paid without question by that lender, a commission of not less than 1 per cent. In the United States, on the other hand, the borrower and not the lender pays the commission and this commission runs from 1 per cent. in the older sections of the country to 4 per cent. in the more remote districts.

Thirty years ago mortgages were commonly drawn for 15 to 20 years, repayable on an amortization plan, but one much favoring the lender, or at the end of the term. As interest rates fell the outcry against these long-dated burdens was so loud the parliament of the Dominion, in face of contracts to the contrary, empowered any borrower after five years to pay off his mortgage with a bonus of three months interest. As a result the custom of the trade limited the usual mortgage to five years where it has since remained.

Borrower has Many Privileges.

It is considered sound business practice to provide under the mortgage that, in addition to the interest, small repayments of principal shall annually be made. At the end of five years the mortgage, if satisfactory, can be renewed for a further term. As in the case with original loans, borrowers are not called upon to pay any commission on renewals, and such has been the force of competition that in many localities the borrower's loan is renewed absolutely free of expense. At the most he is asked to pay merely a nominal legal charge for the preparation of the necessary agreement.

You will note, therefore, that mortgage companies in Canada are called upon to bear, in addition to expenses of management, inspection charges and the like, a definite commission charge not only on the sale of their debentures, but upon their mortgage investments as well.

There is, so far as I am aware, no official record of the total investments of corporate mortgage lenders in Canada, but a conservative estimate places their assets at considerably over $1,000,000,000. Some 30 companies representative of the various classes named, and having assets in excess of $600,000,000 are now on the membership list of the Dominion Mortgage and Investment Association.

MUNICIPAL FINANCE IN BRITISH COLUMBIA

Alternative System of Tax Sales Suggested — Some Interesting Figures

By **LIEUT.-COLONEL G. H. DORRELL.**

The latest official statistics show the total assessment for 1917 of all British Columbia cities to be $431,254,371 and of all districts $186,083,996, making a grand total of $617,338,367. This is $36,163,518 less than for 1916 and $119,379,174 less than for 1914. The total debenture debt of cities is $73,676,039 and of districts $21,623,064, or a grand total for both cities and districts of $95,299,103, the same as in 1916. All the 35 cities and 21 out of the 28 districts have debenture debts large or small, leaving seven districts unindebted. The total debenture debt of both cities and districts, excluding $16,878,589 on revenue producing undertakings is about 12 per cent. of their reduced assessment. The population is given as 239175 for the cities and 125,575 for the districts, or a combined total of 365,750. From these figures it will be seen that the average assessment per capita of the cities is $1,845 and of the districts $1,478, and that the average total debt per capita of the cities is $312 and of the districts $170. These averages compared with the east may seem high but the conditions are so different that any comparison as to security on that basis alone is misleading. For one reason, in newly settled countries the average of five to a family is not reached as in older places, so that there are more taxpayers in proportion, and the cities having been of rapid growth the expenditure has been compressed over much shorter periods. Also if we confine the debt per capita to non-revenue producing indebtedness leaving the revenue producing works to provide their own debts, we find that the average debt per capita of the cities is down to $240 and of the districts to $135.

Interest Payments Maintained.

Notwithstanding the higher borrowing per capita of British Columbia municipalities as against those in the east, interest payments have been well maintained and where in some cases the annual sinking funds have not been immediately banked or invested to the full extent, the uncollected taxes, which are, of course, a first charge on the properties assessed, are more than sufficient to provide for any temporary deficiencies. Pending collection or realization from tax sales they may perhaps be regarded as a temporary security for the sinking fund, but the councils concerned would be well advised if they turned them into cash at the earliest moment.

The year 1917 was marked by the creation of no new long-term issues, and the only borrowings of importance were in the nature of treasury certificates against arrears of taxes for terms of up to three years. In the earlier part of 1917 good prices were bid for such of these issues as came into the open market. The city of Vancouver placed $1,700,000 3-years 5½ per cents at 97.75 and the city of North Vancouver, on a small issue of $170,000 3-years 6 per cents, secured 97.18 in March, 1917, as against 97 bid for a similar issue of $225,000 in June, 1916. All three issues were bought by Toledo bond houses for resale. This class of bond forms an attractive short-term investment, as, although the apparent yield in war times is not especially attractive, the taxes upon which the certificates are secured come in steadily, and the larger portion of the bonds are usually redeemed before maturity, thus spreading the discount over a much shorter period. The advantage of this method of raising funds in circumstances such as have lately prevailed, is that it postpones, and perhaps, renders unnecessary, the disturbance of values invariably attendant on a tax sale, without imposing any additional charges on the taxpayer, as the interest payable on the arrears of taxes is generally more than sufficient to provide for interest and discount on the tax certificates. To provide for ultimate repayment the municipality can always have recource to a tax sale in the last year of the loan if the arrears are not paid up.

A number of tax sales, 23 in all, were held in 1917, and in this connection the Union of British Columbia municipalities might well consider whether the existing system of obtaining payment of arrears by out and out sales with power to redeem within one year might not be improved by an alternative system under which the municipality can offer for sale an indefeasible first mortgage on the assessed property, for, say, three years at a comparatively high rate of interest increasing annually, less a rebate for punctual payment. Such tax mortgages would rank before all existing encumbrances and being for comparatively small amounts would, in most cases, provide an attractive investment for moderate sums. The purchaser of the tax mortgage would get a good and annually increasing rate of interest, while any failure to pay promptly would increase the ultimate amount receivable. Moreover, the owner or mortgagee would find it to his advantage to provide the small sum required to meet the half-yearly interest on the tax mortgage. One essential condition, however, would have to be provided—viz., that if within the three years payment was not made or a continuation of the tax mortgage arranged with the holder, foreclosure could be obtained on a 30-days' notice or by some other simple and inexpensive process.

Another departure from the existing order of things to which provincial and municipal authorities might give consideration when financial conditions improve, is the abolition of individual borrowing in the open market by the smaller municipalities and the institution of a provincial government consolidated municipal fund. From this consolidated fund raised by the provincial government primarily on the security of municipal debentures pledged to it, approved loans to the smaller municipalities would be made. The modus operandi would be very much as follows:—

Consolidated Municipal Fund.

When a municipality wished to raise a loan for works, the council would prepare estimates and pass by-laws for debentures as at present with the exception that the rate of interest would not then be specified. These would be submitted for approval to the inspector of municipalities (or to a local government board as in Saskatchewan) who would examine the proposed expenditure in relation to the assessment and existing indebtedness and the general character of and necessity for the undertaking. If the loan satisfied the customary tests, the amount required would be advanced from the consolidated municipal fund, and the rate of interest would then be fixed, having regard to the rate at which the consolidated municipal fund could itself obtain money. As this fund would be raised primarily on the security of the municipal debentures deposited with the government as security for the loan, backed by the province, the security would be of the soundest and the rate of interest very favorable. All municipal sinking funds would be payable to the consolidated municipal fund and would be available for other loans. The advantages to the smaller municipalities would be the saving of heavy discounts, a lower rate of interest, and the provision in full of the funds they wished to raise. The consolidated municipal stock of the provincial government would be a trustee investment and would have a ready market, thus supplying two of the conditions, the absence of which is largely responsible for the undue expense attendant on the borrowings of small municipalities. Had such a system been in effect during the past five years the saving to the municipalities in discount and interest would have amounted to hundreds of thousands of dollars. The system would involve a closer control of municipal expenditure by the provincial government, than at present exists; but there would be permanent benefits even from that, outweighing any passing inconveniences and it would put a brake on all ill-considered and hasty expenditure.

Improvements Tax Exempt.

The greater number of British Columbia municipalities have adopted the system of exempting improvements from taxation. Fourteen out of the 35 cities and 21 out of the 28 districts having exempted them wholly and the remainder in part, usually 50 per cent. This, compared with 1914, shows that three cities and three districts have returned to the system of taxing improvements in part. Space does not permit of any examination of this somewhat crude system of apportioning the contribution of individual taxpayers to expenditure for general purposes. At the best a tax on land values alone without improvements might be adopted as a rough and ready method of fixing individual taxation in a newly settled agricultural district, but it is full of unfairness and inequalities when applied to established cities and communities where wealth exists in many other forms.

The difficulty of selling municipal debentures during recent years has not been altogether an unmixed evil, for it deterred new issuings. Up to three or four years ago municipal borrowings had become too easy, with the result that in many cases expenditure was incurred that would have been better left to later years. On the whole British Columbia municipal loans may be regarded as in a healthy condition, for while the borrowings have not increased and are well within the statutory 20% limit of the reduced assessments, the sinking funds are accumulating and the revenue producing works are becoming well established and in many cases are earning profits that go to reduce general taxation. It does not follow that in every case everything is absolutely as it should be—that would be to expect too much—but on the whole, the buyer of British Columbia municipal debentures may be well satisfied with his investment.

LAND SURTAX PROPOSED

It Would Secure Reasonable Maximum of Revenue from Unearned Land Values

By C. FRANK BEER.

It is self-evident that new sources of taxation must be found to provide interest charges and a sinking fund for the increased indebtedness—municipal, provincial and federal—resulting from the war. It has been claimed that for this purpose a tax upon the so-called "unearned increment" would prove of great service. These claims have probably been exaggerated, but from a study of the question it would appear unquestionable that a considerable revenue could be derived from this source. It appears to be equally true that "unearned" values are rightly the property of the whole people and should not be monopolized by individual property owners.

It is not the object of this article, however, to deal with all the aspects of so large a subject, but to direct attention to a method of taxation which if adopted will, it is believed, secure a reasonable maximum of revenue from unearned land values. Other merits of the plan outlined are found in the provision made for fluctuating values, for ensuring a comparative uniformity of revenue and for discouraging speculation in land. The name applied to this plan of taxation is the Surtax.

As to Land Surtax.

The land surtax is a special tax graduated from one to three per cent. over a period of three years and levied upon land values which are not the result of improvements made by the owner. It applies only to the increase in value and its object is to secure for the public exchequer a revenue from that portion of the value which is commonly referred to as unearned. A concrete illustration of the surtax will better explain its objects and operation.

For the purpose of this illustration it is assumed that a piece of land in 1915 is assessed at $10,000 and that the usual tax rate is 20 mills.

1915. Assessed value $10,000. Tax rate 20 mills.

1916. Property having increased in value $2,000 the tax rate of 20 mills will be levied upon the total value ($12,000) and a surtax of 1 per cent. upon the unearned increased value of $2,000. In 1917 the surtax will be 2 per cent., and in 1918 3 per cent., at which it will remain so long as the property is valued at not less than $12,000.

If in 1917 the property is found to be worth only its original value of $10,000 the surtax ceases to operate.

If Value Increases.

If, upon the other hand, the property is found to have further increased in value the surtax will be applied to the newly ascertained increase, beginning as in the former case at 1 per cent. and increasing yearly until 3 per cent. is reached. For instance, if in 1917, the new increase in value is ascertained to be an additional $2,000, the total taxation will be 20 mills upon the total value of $14,000, 2 per cent. upon the first $2,000 (this being the second year), 1 per cent. upon the second $2,000 (this being the first year).

In 1918—20 mills upon $14,000, 3 per cent. upon the first $2,000 (third year), 2 per cent. upon the second $2,000 (second year).

In 1919—20 mills upon $14,000, 3 per cent. upon both the first and second $2,000, and this taxation will continue thereafter as long as the value is maintained.

If in any year the value is found to have been reduced the surtax is discontinued upon the amount of the reduction. If the value is reduced to $10,000 the surtax ceases altogether. If the value goes below $10,000 the surtax comes into operation only when the value again exceeds this amount.

Change of Ownership.

If however, the property changes ownership at less than $10,000 the surtax is chargeable upon any valuation in excess of the purchase price. The new owner is not given the privilege of standing in the place of the original owner by receiving exemption from the surtax until the original $10,000 is again reached.

If at any time the property changes ownership at a price in excess of the assessed value the price at which the property is acquired will form a basis for the computation of the surtax. For instance if the property should in 1919 be sold for $16,000 instead of the assessed value of $14,000, the surtax of 3 per cent. would at once apply to $6,000. The market price of the property will, therefore, be largely affected by the surtax which it must carry and the incentive to hold land for prospective large profits will be partly if not wholly eliminated.

Since the surtax is collectable only upon increased values it will be to the advantage of owners to have their property assessed at its fair market value. Failure to do so will result ultimately in a considerable penalty since the market value of the property will be reduced owing to the operation of the surtax upon all the purchase price in excess of the assessed value. To prevent evasion of this tax the vendor and purchaser should be required to set out on oath the true consideration for each sale in the conveyance by which the sale is carried out.

Result of Surtax.

An immediate result of the surtax would be to discourage speculation in land. Land prices would be steadied and in some cases reduced. There would be no longer any incentive to market sub-divisions in advance of actual requirements. The tax would discourage any step which might lead to its coming into operation. It is obvious, therefore, that the adoption of a tax upon unearned values would probably not at first result in a large increase in revenue. There would be, however, a decided check upon land speculation, a check upon land monopoly, and a somewhat general reduction in land values since the opportunity for profit—even though postponed—is greatly lessened.

The advantages of the surtax over an alternative plan by which the state shares in the increased value only when actual sales have been made are apparent. Moreover, and this is important, provision is made for an elasticity of taxation to redress the ups and downs of boom activities. A severe check is provided against an artificial market. Land would be retained for its natural use as long as possible, since this would be found the most profitable practice. For instance, land near cities would be kept as farm land until the requirements of the cities made further sub-divisions necessary. Land for housing would cost, therefore, only a reasonable advance over farm lands. And even of this increased valuation the state would receive a considerable share.

Sub-Division Riot Impossible.

It would appear to the writer that the revenue anticipated from the operation of a special tax upon the unearned value of land has been greatly over-estimated. From this it is not argued that the tax is one which should not be levied. On the contrary, the social advantages of such a tax afford ample justification for its adoption. The market value of land would be subject only to the natural increase. Under its operation the wild riot which was witnessed a few years ago in land sub-divisions would be impossible. The advantages derivable from the ownership of land would be secured to those who use it instead of to those who withhold it from use. To every one else its ownership would be a burden. One of the chief obstacles to the betterment of housing conditions would be removed. And finally to the extent to which land values are reduced or stabilized the surtax would prove of general advantage since in the last analysis the burden of unearned values falls chiefly if not wholly upon the wage-earning members of the community.

HOW INTEREST RATES HAVE RISEN

Canada Paid 7 Per Cent. for Money in New York Last Year

In the early history of Canada we had to pay 6 per cent. for our loans. When Canada was a Crown colony, the Imperial government made good the deficits between revenue and expenditure. At a later date when we had begun to borrow in England, they frequently guaranteed our bonds. For a long time money cost us 6 per cent., even with a guarantee behind our securities. It was not until 1876 that the Dominion was able to borrow in London at 4 per cent. on its own unaided credit. In 1894, during a period of depression, the rate we paid for a large loan was only 3½. Since then it has varied, and during recent years, the tendency was upward. This has been especially the case during the war period. Our loan of $100,000,000 in New York in August last cost us approximately 7 per cent.

The United States was able to borrow last year, through its first Liberty Loan, $2,000,000,000. The country, however, had accumulated vast wealth during three years of war, and a patriotic appeal, when at last the United States had entered the war, brought the required amount at a 3½ per cent. rate. In issuing its second loan of $3,000,000,000 in October last, the United States raised the rate from 3½ per cent. to 4 per cent., thus following the precedent to which practically every other government in the war has had to resort.

Great Britain's second loan, floated in June, 1915, at par, bore interest at 4½ per cent., a nominal increase of 1 per cent., and an actual increase of a little more than ½ of 1 per cent. over the first loan, issued in November, 1914. The third British war loan, issued in February, 1917, bore interest at 5 per cent., but was offered at 95.

All the French loans have borne a nominal interest of 5 per cent. The first, offered in February, 1915, was placed at 96.50, involving an actual interest cost of 5.60 per cent.; and the National tax-free French rentes, offered in November, 1915, and placed at 88, brought an actual interest yield of 5.70 per cent. The loan of October, 1916, was offered at 88¾.

Russia's first two war loans were offered at a nominal 5 per cent.; the four loans following those carried at 5½ per cent., but the actual yield, allowing for selling price, started at 5.30 per cent., and is now high.

Italy had to pay only 4.70 per cent. net on her first war loan; her second was carried at 5.20, and at the beginning of 1917, she offered a 5 per cent. perpetual loan at 90.

All of Austria's loans have been offered at the nominal interest of 5½ per cent., with the actual yield running to 6¼ per cent. Hungary, with nearly all loans nominally at 6 per cent., has sold at discounts to yield 6½ per cent. or over.

Every German loan has borne a nominal interest rate of 5 per cent The price of subscription was: On the first loan, September, 1914, 97½; on the second, March, 1915, 98½; on the third, September, 1915, 99; on the fourth, March, 1916, 98½; on the fifth, September, 1916, 98; on the sixth, March, 1917, 98; on the seventh, October, 1917, 98.

The investments of the Royal Exchange Assurance Corporation in British and allied government war loans now exceed £2,150,000.

The result of the seventh German war loan have been announced as 12,430,000,000 marks ($3,107,500,000), from upwards of 5,200,000 subscribers. Instead of being the great triumph which it has been proclaimed in the German press, British critics who have analysed the figures, consider that the loan bears the mark of rapidly increasing financial difficulties.

NOTES.—In addition to the above loans, advances for war purposes have been made to Canada by the Imperial Government, and Canada has established credits here for the British Government. These loans are not included in the above figures.

*Included in this sum are $8,000,000 of a total of $50,000,000 Canadian bonds repurchased in United Kingdom since the war commenced to the end of 1916. The inclusion of the $42,000,000 of unclassified repurchases brings the total of Canadian bond sales in 1916 to $356,000,000.

Year	Sold in Canada	Sold in United Kingdom	Sold in United States	Total

1917	546,330,714	5,000,000	174,708,365	726,039,079

**Included in this sum are $8,000,000 of a total of $50,000,000 Canadian bonds repurchased in United Kingdom since the war commenced to the end of 1916. The inclusion of the $42,000,000 of unclassified repurchases brings the total of Canadian bond sales in 1916 to $356,000,000.

*In the above tables it has been estimated that of the first Canadian war loan of $100,000,000 in November, 1915, $25,000,000 was sold in the United States; second loan of $100,000,000 in September, 1916, $30,000,000 in the United States; third loan of $150,000,000 in March, 1917, $25,000,000 in the United States; and fourth loan (allotted) of $400,000,000 in November, 1917, $10,000,000 in the United States.

Canadian Trade with Britain, France and Italy

Charts Which Show at a Glance the State of Trade Before the War Between Canada and Important Countries Overseas

The tables and charts which follow are intended to enable readers to see at a glance the state of trade before the war between Canada, the United Kingdom, France, Italy and Belgium.

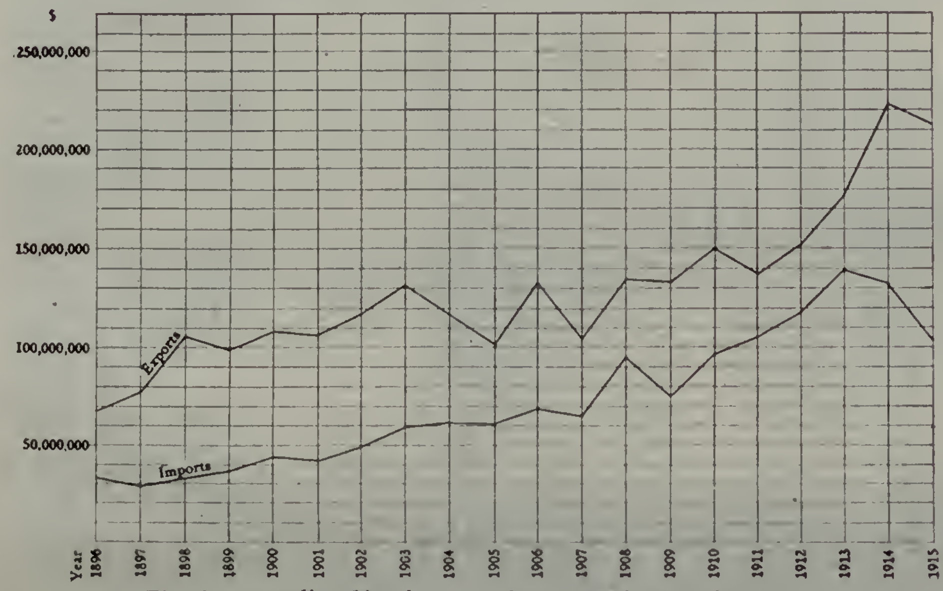
To indicate normal pre-war conditions, particularly with respect to the competition which Canada must expect in these markets, the trade returns of the British, French and Italian Governments for the year 1913 have been utilized. The figures of this one year, it is thought, will give a more satisfactory view of the situation than those of a series of years, or than an average over several years.

British returns are in pounds sterling. Italian import figures, originally in lire, have been converted to dollars. The French customs imports statistics do not give details of values, but only of weights of goods received from abroad. These details have been left in the original Metric Quintals (220.46 pounds) and the total value of any class of import has been converted from francs to dollars. The French imports are for consumption, those of the other countries are general imports.

The tables and charts, prepared by the Special Trade Commission of Canada which visited the United Kingdom, France, Italy and Belgium in 1916, are published below with the special permission of that Commission and of the Department of Trade and Commerce, Ottawa.

CANADA'S TRADE WITH UNITED KINGDOM, 1896-1915

Merchandise (Canadian Government Returns)



(Fiscal year ending March 31st. Year 1907, nine months only).

Canada's Competition in United Kingdom.

CANADIAN RAILROAD RATES

The award of the Dominion Railway Commission anent the application of the Canadian railways for an increase of rates was examined and commented on in railway circles in Montreal, last week. The consensus of opinion was that the award, in its incidence and amount, was inadequate; and that the railways would have to follow the example of roads in the United States and go back to the commission with a fresh petition.

The refusal of the fifteen per cent.. in the West, on the ground of high rates there, took no account, it was said, of the fact that in the West particularly the demands of labor reached their apogee and was adversely commented on, while the long delay in making the award, thus cutting the railways off from the increased revenue at the time when the grain haulage would have been important, was criticized. It was pointed out, too, that it would take about three months more in which to make out classifications; and, in the meantime, the costs of operation were constantly increasing.

PULP AND PAPER INDUSTRY

What Its Growth Means to Canada—Unfair Price Fixing

By F. R. GRAHAM.

One of the outstanding features of the industrial revival in Canada following the first few months of war conditions, has been the steadily increased output of the existing pulp and paper mills and the number of new mills put into operation. In a general way, the Canadian investing public have had confidence in the industry, but United States capital has given it a support latterly that means a great deal for Canada and certainly should repay handsomely those United States investors who have employed their funds in this direction. Outside of United States' branch factories there is probably more United States money invested in Canadian pulp and paper enterprises than in any single Canadian industry, and, in the opinion of the writer, no industry offers more attractive investment opportunities. With the possible exception of the case of one or two greatly over-capitalized properties, investors in this class of securities have enjoyed uninterrupted and growing returns for a number of years, and with the continued growth of the industry the holders of the junior securities of those companies having extensive timber limits, and ample water powers to permit of further development, are bound to receive greatly increased returns on their investment, accompanied by material increases in the market value of their holdings. In the meantime, the underlying securities of the same concerns will command the attention and consideration of the most conservative.

Excel at Paper Industry.

In a recent article Sir Edmund Walker, that able exponent of Canadian financial affairs, points out the necessity for Canada to develop those industries natural to her and he makes particular reference to the pulp and paper industry as follows:—

"Papermaking is another basic industry in which Canadians can excel. We began this trade by cutting down pulpwood and shipping it all to the United States. We were more or less terrorized into the idea that we could not make pulp much less the paper, but in a few years we have been able to assume a commanding position in the paper-making industry of North America, which we can maintain by careful and wise development, but what we need to do is to go farther and discover what better varieties of paper we can manufacture. We should make from the commonest to the finest qualities and take a stand with the big papermaking countries of the world."

No Danger of Over-Production.

While there has been fully $80,000,000 additional capital invested in Canadian pulp and paper properties since 1910 there is no danger of our reaching a point where the question of over-production becomes a factor. In the first place we have every civilized country in the world as a potential market and an existing large and growing market to the south of us—the United States—which is quite able to take all the pulp and paper Canada can produce with existing plants. In the second place, the amount of paper Canada can produce, in spite of her large supplies of wood, is limited by the combination of important factors necessary to the establishment of a paper mill on a profitable basis, and these are: (a) Timber holdings sufficient in extent to ensure a supply of suitable wood for at least thirty years; (b) sufficiently well-watered limits to ensure good driving streams and consequently low delivery cost of wood at the mills; (c) ample water powers, within reasonable hauling or driving distance of the wood supply, capable of economical development.

It will be seen, therefore, that the number of pulp and paper mills even in Canada, so plethoric in wood supplies and water powers, is bound to be limited, although we have a long way to go as yet before we need face the bogey of "over-production."

After War Conditions.

Conditions likely to prevail after the war is the uppermost thought in the mind of the industrial captain as well as in that of the investor in industrial securities. There is no denying that imports from abroad, particularly from Sweden, to the United States, have been cut off since the commencement of the war. This, consequently, has thrown open to us, practically without competition, that great market; but our manufacturers, with good reason, do not fear the return to ante-bellum conditions as Canada is now producing, at a lower cost, a higher grade of pulp than the European product. In addition, we have the considerable advantage of an extremely short haul in the case of the United States markets and the advantage in distance also to the South American, Australian, Japanese and Oriental markets generally. Our shipments to the last-named countries continue to expand and they will undoubtedly prove a permanent market for our exportable surplus of pulp and paper products—90 per cent. of our total output. The actual figures in this connection in dollars are of interest. The period covered extends from 1910 to March, 1917, and graphically illustrates the growth of the industry as well as the growth of the export trade amounting to approximately $44,000,000 for the fiscal year ended March, 1917:—

Exports of Canadian Pulp and Newsprint, 1910-1917.

Fiscal year.		Chemical pulp.	Mechanical pulp.	Newsprint.	Total.
1910	..	$ 1,658,846	$3,545,751	$ 2,612,243	$ 7,816,840
1910-11	..	1,308,101	4,407,431	3,092,437	8,807,969
1911-12	..	1,587,535	3,507,770	3,291,926	10,387,231
1912-13	..	2,100,842	3,408,702	5,692,126	11,201,670
1913-14	..	2,923,083	3,441,741	11,385,845	17,750,669
1914-15	..	4,806,622	4,459,539	14,091,682	23,357,843
1915-16	..	6,801,011	3,775,537	17,974,292	29,550,840
1916-17	..	14,032,950	6,371,133	23,594,134	43,998,217

Helping to Adjust Balance.

These figures will impress the student of Canadian economic conditions as he will see in them an important and rapidly growing factor in adjusting the adverse balance of trade with our neighbors to the south, which last fiscal year approximated $460,000,000. We are not, however, wholly dedependent on the United States market. Chemical pulp has been exported in increasing quantities to England since the outbreak of war as well as to other European States, and the leaders of the pulp and paper industry in Canada plan to extend the trade to every civilized country of the globe. In the meantime, in addition to the United States and European markets, we export to South America, Australia, Japan, China and the Orient generally. Our Pacific Coast mills naturally have the advantage in supplying the last-named countries and the demand from these markets has been an important factor in bringing about a large increase in the capital invested in new British Columbia mills since war began and this will prove a continued source of profit to the province and to the investors from this forward.

Unfortunately, the pulp and paper industry has been thrown into the realm of everyday politics by the refusal of the newspapers to recognize in this industry, which is acknowledged in their own and all industries at this time—namely, the growing cost of labor, raw materials and other factors entering into the costs of any manufacturing proposition. The result has been that the influence of almost the entire press of the country has been brought to bear on the government in an endeavor to fix a price for newsprint at a point where the manufacturers claim a fair profit cannot be made. As the writer has pointed out in a previous article in *The Monetary Times*, only about 10 per cent. of the output of the Canadian paper mills is consumed in Canada, but the result of the unfair agitation for the price fixing of newsprint has had the logical effect of endangering the export market.

In fact, the press of the country appear to have been able to bring about an understanding between the government at Washington and the government at Ottawa in an endeavor to fix the price of newsprint in the United States markets as well as in the Canadian, at a figure considerably below the current market price—thus sacrificing the advantages of a free export market which was accruing to the industry in particular and to Canadian trade and commerce in general. While these conditions have retarded the growth of the industry somewhat and discouraged a large additional amount of capital that would otherwise have been devoted to the development of the industry—that is so far as the manufacture of newsprint is concerned—they will no doubt prove only temporary in nature and within a very short term of years it is not unreasonable to expect that our exports of pulp and paper products will reach a total several times the present figures of $60,000,000 to $70,000,000, which is estimated for the present fiscal year.

UNPREPAREDNESS OF CORPORATE INSURANCE

Team Work and Organized Publicity Needed to Overcome Existing Prejudice and Trend Toward State Insurance

BY GEORGE GILBERT.

While it is true that the principle of insurance has received more conspicuous public endorsement since the war started than ever before, it is also true that the question has been more frequently raised whether the function of insurance is one which should be left to private institutions or should be assumed by the state.

If it is a fact that corporate insurance, under efficient supervision, is the form of insurance best adapted to meet the requirements of the public, no time should be lost in bringing about a general realization of this fact. All agitation for municipal and state insurance schemes, including workmen's compensation insurance by the provinces, health, unemployment and other kinds of so-called social insurance, would cease if the people were adequately shown the disadvantages of establishing in a free country government bureau insurance monopolies, such as they have in Germany, where the chief object is to increase the power of the state thereby, and not to benefit the individual, but rather enslave him. As it is, we find union labor in many quarters advocating the elimination of insurance companies from participation in workmen's compensation insurance and the establishment of a government monopoly of the business, the principal argument advanced being the success of Germany's state-controlled insurance of that hazard!

While it is impossible to foretell what the social tendencies will be after the war, the present is unquestionably a testing time, and almost every institution is being called upon to justify its existence Corporate insurance is no exception, and the service which it performs, in the economy of things, must be brought home to the public generally in order to offset the work of the propagandists, who are now busily engaged in creating a public opinion favorable to the acceptance of various schemes of state insurance as remedies for social evils and social injustice, and part of whose programme of reforms is to have the state take over all kinds of insurance—fire, life, casualty, marine, etc. Private insurance is attacked from the angle of stockholders' dividends and agents' commissions, which are denounced as uneconomic and indefensible from the public standpoint.

Knowledge of Insurance Business.

It is rightly held that prejudice cannot exist in an atmosphere of knowledge. The time is opportune to begin the work of creating that atmosphere of knowledge about the insurance business which will free it from unjust criticism, the result of existing prejudice, and which will also enable the public to get a better grasp of what is really involved in making the state an underwriter of insurance hazards of any description. Co-operation of all branches of the business and systematic publicity are required. Every individual whose livelihood is dependent upon the perpetuation of insurance as a private institution, whether company official, agent, broker or clerk, or whether in the fire, life or casualty branch, or whether a believer in stock, mutual, old-line or fraternal principles, should be actively engaged in the work of public enlightenment.

Service is now recognized as the greatest commodity in the world, and it is on the basis of the superiority of its service that corporate insurance must justify its continued existence. It should not be difficult to prove to the satisfaction of the people generally that they will be better served by adhering to the principles of individualism and independence, as exemplified by private insurance, rather than by adopting the principles of paternalism, with loss of freedom and independent initiative, as exemplified by state insurance. As a matter of fact, "Save the world for democracy" is the watchword of the hour, and voluntary insurance, as opposed to compulsory state insurance, is essentially a democratic institution. Its underlying principle is voluntary co-operation for the distribution of loss. While the company supplies the security and the machinery for operation, it is the voluntary co-operation of individuals which makes possible the successful working of the principle.

While in Canada there is not as yet apparent as widespread an agitation for state insurance as is in evidence in the United States and in Great Britain, it is idle to ignore the effect on public opinion of what is going on around us. In the United States the federal government, besides furnishing its soldiers and sailors with insurance protection against death and disability, has also established a government war risk bureau, where those engaged in war service may obtain additional life insurance of from $1,000 to $10,000 at net term rates, ranging from 63 cents monthly per $1,000 at age 15, 69 cents at age 30, 81 cents at age 40, to $3.35 monthly at age 65. That there will be a powerful demand for the continuance of these facilities after the war goes without saying. In Great Britain the proposal has been seriously put forward by the Fabian Society that all the life assurance business of the country should be transferred to the government. Even in Canada we have witnessed the elimination of the insurance companies from participation in workmen's compensation insurance without as much as being given an opportunity to show what they could do in competition with state-administered insurance. It is but a step from state workmen's compensation insurance to state health insurance, state unemployment insurance, and state life and disability insurance.

Right Kind of Publicity.

We have also had state control and state regulation of fire insurance rates advocated in many quarters in Canada. This can best be met by a campaign of publicity which will make it plain that the way to get lower fire insurance rates is not by state regulation of premiums, but by having fewer fires, and that this can be brought about by better construction, improved protection, and greater care on the part of property owners The right kind of publicity would also show conclusively that the companies give property owners adequate reductions in rates for improvements effected in their risks, and that if proper laws are made and enforced for safe construction and for every reasonable measure to suppress fires, and for the punishment of those who, through carelessness or negligence, are responsible for fires starting, the rate question will solve itself in all classes of risks, as has already been done in the sprinklered classes.

Publicity could also be used to advantage to show what all classes of insurance companies are doing to improve their methods and practices so that the burden of insurance taxation upon the community will be no greater than is absolutely necessary to protect it from financial loss through the happening of the various contingencies insured against. If the public were convinced of this fact, they would realize that the proposal to have the state go into the insurance business is not the right way to take hold of the question of reducing the insurance tax. But a great deal of team work on the part of insurance interests will have to be called into action without delay if this happy consummation is ever to be reached.

CANADA'S COAL AND COKE PRODUCTION

The following is an estimate, in short tons, of the coal and coke production of Canada for the first six months of 1917, compared with the year's production in 1916, the figures being those of the Mines Branch, Ottawa:—

Province.	1916.	Six months, 1917.
Nova Scotia	6,912,140	3,058,216
New Brunswick	143,540	93,485
Saskatchewan	281,300	139,023
Alberta	4,559,054	1,763,506
British Columbia	2,584,061	1,100,190
Yukon	3,300	......
Production	14,483,395	6,154,420
Imports:		
Bituminous	13,009,788	6,392,378
Anthracite	4,570,815	2,231,859
Total	17,580,603	8,624,237
Exports	2,135,359	825,427

The record of exports and imports is compiled from the published reports of the customs department, and for imports represents the quantities of coal entered for consumption.

The production of coke includes only the coke made in bee-hive or by-product ovens and does not include coke made by gas companies in retorts.

WESTERN WHEAT CROP ESTIMATES

The following are eight of the estimates made last year of the western wheat crop:—

Estimate of—	Bushels.
Northwest Grain Dealers	217,377,000
Manitoba Free Press, Winnipeg	214,250,000
Norman P. Lambert, western correspondent Toronto Globe	217,000,000
Canadian Northern Railway	250,000,000
E. L. Pease, president Royal Bank of Canada..	250,000,000
Canadian Bank of Commerce	225,000,000
Grain Growers' Guide, Winnipeg	224,307,200
Census and statistics office, Ottawa	225,778,700

MOOSE JAW'S FINANCIAL POSITION

In the condensed general balance sheet of the city of Moose Jaw, printed on page 155, the miscellaneous assets should read $182,982.70 instead of $183,182.70.

ESTIMATES OF WORLD'S CROPS

The International Institute of Agriculture gives the following official estimates of cereal production in 1917:—

The production of wheat in Spain is 141,090,000 bushels, or 92.6 per cent. of the crop of 1916, and 112.7 per cent. of the average production during the five years, 1911-15; France, 145,074,000 bushels, 71 per cent. of 1916, and 53.4 per cent. of average; Italy, 140,000,000 bushels, 79.5 per cent. of 1916, and 76.7 per cent. of average; Netherlands, 3,453,000 bushels, 73.3 per cent. of 1916, and 60 per cent. of average; Sweden,

VICTORY LOAN ALLOTMENT

On December 31st, 1917, Victory Loan returns were still coming into the finance department, Ottawa, which had not then received the subscriptions from Canadian soldiers and others overseas. Final figures will be impossible until all returns are at hand. A total of $393,000,000 had been allotted up to the end of December, 1917.

COBALT ORE SHIPMENTS, 1904-1917

In tons of 2,000 lbs.—Figures for 1917 are preliminary estimates.

* The shipments for 1904 totalled 158.55 tons; and for 1905, 2,336.01 tons.

† In addition to the shipments by this Company, the Dominion Reduction Company shipped from this mine and two others, 2,322 tons of ore, which are included in the total shipments of 15,044 tons in 1916.

POPULATION AND MILEAGE OF RAILWAYS

The following table shows the population per mile of railway in Canada and in other parts of the British Empire:—

Country.	Total mileage of railways —Miles.	Per mile of line open. Population— Number.	Area— Square miles.
Canada (1915)	35,582	227	105
Australia (1915)	22,263	222	134
New Zealand (1915)	2,945	370	35
South Africa (1914)	8,428	*162	56
Newfoundland (1914)	875	283	49
United Kingdom (1914)	23,701	1,944	5

---

*Excluding native population.

WESTERN CANADA'S SHARE OF CROPS

Taking the Dominion government estimates as at the end of September of the principal crops of the whole of Canada, and comparing with the prairie provinces production alone, the following results are obtained:—

Crop.	All Canada, bushels.	Three prairie provinces, bushels.
Fall wheat	16,034,000	1,423,700
Spring wheat	233,113,500	224,355,000
All wheat	249,147,500	225,778,700
Oats	439,823,100	268,189,350
Barley	59,310,650	43,168.400
Rye	4,194,950	2,498,850
Flax	7,455,470	7,339,470

RECORD OF INTERNATIONAL EXCHANGE QUOTATIONS, 1910-1917

(Compiled for The Monetary Times by J. S. Munro, Foreign Department, The Canadian Bank of Commerce)

The following table shows the course of English, French and German exchange in New York, for sight drafts during the past six years, as well as that of some other countries. New York funds are expressed in 64ths. For instance, in January, 1910, the highest rate for New York funds was a $\frac{4}{64}$ premium, and the lowest a $\frac{3}{64}$ discount.

Months and Years		New York Funds in Canada (in 64ths)		Sterling		(France) Francs		(Germany) Marks

Mutualization of the Equitable Life Assurance Society was favored by more than 96 per cent. of the policyholders, according to an official count of their vote on the proposed plan announced in New York last week by the State Insurance Commissioner. The total valid vote, he said, was 88,126, of which 84,964 were for the plan. The next step required is the approval of the State Superintendent of Insurance. If this is obtained the society will then pass permanently under the control of its policyholders.

CANADIAN WAR LOAN INTEREST PAYMENT DATES

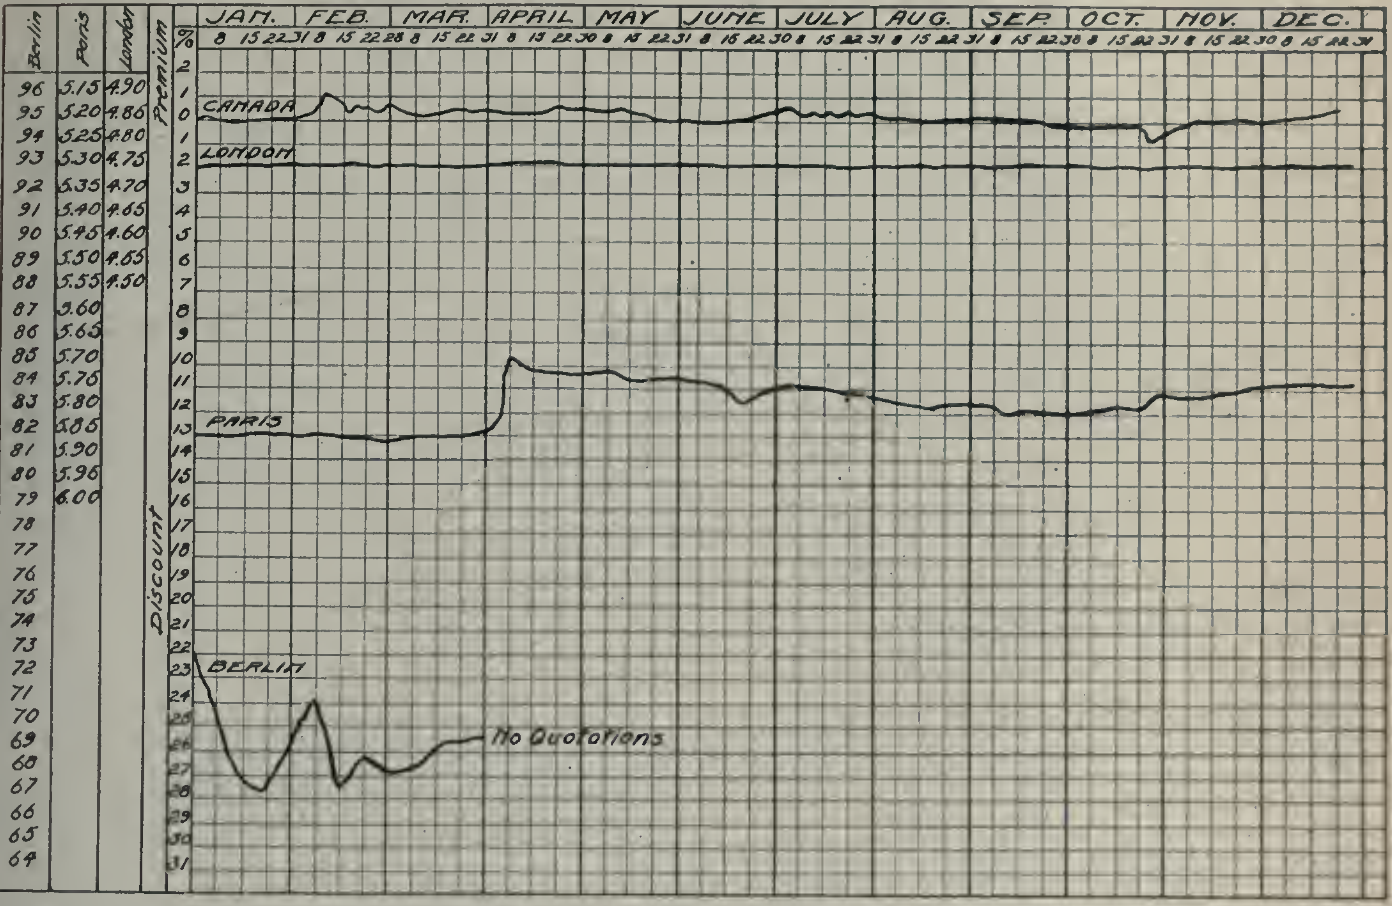
The following table shows the half-yearly interest payment dates of our four war loans:—

Loan.	Due.	Rate %.	Interest payable.
First......	1925	5	June 1st and December 1st
Second....	1931	5	April 1st and October 1st
Third.....	1937	5	March 1st and September 1st
Fourth....	1922-27-37	5½	June 1st and December 1st

STERLING AND INTERNATIONAL EXCHANGE QUOTATIONS FOR 1917

(Compiled for The Monetary Times by Mr. J. S. Munro, Toronto.)

Graph Showing the Percentage Premium or Discount on the Gold Par of Exchange of the Rates Quoted in New York for Cheques on London, Paris and Berlin respectively, during 1917.



Who's Who in The Monetary Times

(Continued from page 4.)

RAWLINGS, H. E., Montreal.—Born in 1876; second son of the late Edward Rawlings, who, in 1872, founded the Guarantee Company of North America, with which, since leaving school, he has been associated at its head office in Montreal and various branches throughout the United States and of which, in 1916, he was elected president and managing director. He is also a vice-president and a director of its subsidiary company, the United States Guarantee Company of New York, and a director of the Montreal Telegraph Company. Mr. Rawlings, in the administration of his company's affairs, reflects his father's training and years of experience, and is strongly of the opinion that most men who occupy positions of trust are born honest, but that an absence of consistent accounting or supervision has generated a temptation that has made many a defaulter. (Page 204.)

ROBINSON, H. BEVERLEY, Montreal.—Partner, J. M. Robinson & Sons, investment bankers and stock brokers, Montreal; formerly with the Bank of Montreal; later with N. W. Harris & Company, Boston; member of Montreal Stock Exchange; Active figure in the financial world. (Page 158.)

RUNDLE, W. E., Toronto.—Managing director, National Trust Company; well-known financier and public-spirited citizen. (Page 160.)

SADLER, W. A., Toronto.—Formerly an Ontario barrister and solicitor at law. For the past six years has specialized in credit investigations and credit adjustments throughout the Western States and Western Canada; has recently opened an office in Toronto, with a western organization, for the purpose of engaging in this business. Has contributed financial and other articles to various publications. (Page 83.)

SCLANDERS, F. MACLURE, F.R.G.S., F.R.H.S., F.R.C.I., Mem. Royal Agric. So., Eng., Windsor.—Commissioner, Border Chamber of Commerce, comprising Ford, Walkerville, Windsor, Sandwich and Ojibway; keen observer of Canadian conditions; a vigorous and instructive writer. (Page 258.)

SMITH, MAXWELL, Victoria, B.C.—Chairman, Land Settlement Board of British Columbia; formerly superintendent of now defunct agricultural credits board; has had wide experience in business and farming. (Page 86.)

STEVENS, H. H., M.P., Vancouver.—Has been in British Columbia for the past 22 years; is one of the best known of our Pacific Coast citizens; has been active in watching in the federal house the interests of his province. (Page 234.)

SWANSON, W. W., M.A., Ph.D., Saskatoon.—Educated at Oshawa High School and Queen's University. Specialized in economic science under Professor Adam Shortt. Received the gold medal and graduated M.A. (1905). Fellow at the University of Chicago, 1905-1908. Graduated Ph.D., 1908. Associate professor of economic science, Queen's University, 1908-1916; now professor of political economy, University of Saskatchewan. Author of "The Establishment of the National Banking System." Frequent contributor on financial questions to reviews of Canada and United States. (Page 23.)

TAYLOR, SIR FREDERICK WILLIAMS-, LL.D., Montreal.—General manager, Bank of Montreal; formerly manager of the same bank, in London, England; one of the most distinguished bankers on this continent; winner of Society and Arts gold medal on Canadian banking system; is doing a great deal of patriotic work. (Page 33.)

THOMPSON, J. ENOCH, Toronto.—Spanish consul, Toronto; has represented that country here for 27 years; has received frequent recognition of services, the last about a year ago when he was promoted at end of 25 years services from Chevalier to Knight Commander of the Order of Isabel la Catolica. (Page 250.)

THOMSON, JOHN STUART, Jersey City, N.Y.—Oriental explorer and author; prominent as a propagandist of many international movements for the past 18 years; born and educated at Montreal but is a United States citizen; author of many books, including "China Revolutionised," "The Chinese," etc. He has travelled in nearly every country. From the year 1899, he has been a prime mover of a propaganda in the world's magazines to bring about a permanent naval defensive alliance of the English-speaking nations and France. For three years was Oriental manager at Hong Kong, China, of the Pacific Mail and Toyo Kisen Kaisha trans-Pacific steamship companies, and for some years assistant to vice-president at New York of the Savannah, Florida & Western Railway (Atlantic Coast line) and manager of the Plant Steamship Lines to Cuba and Canada. He started in life as a junior secretary with the late Sir Joseph Hickson, general manager of the Grand Trunk Railway, Montreal, and began his world-travels on the personal staff of that famous railway magnate. Mr. Thomson was educated at Senior School, Presbyterian College and McGill University, Montreal, but has spent recent years in New York, or the suburbs of that city. (Page 20.)

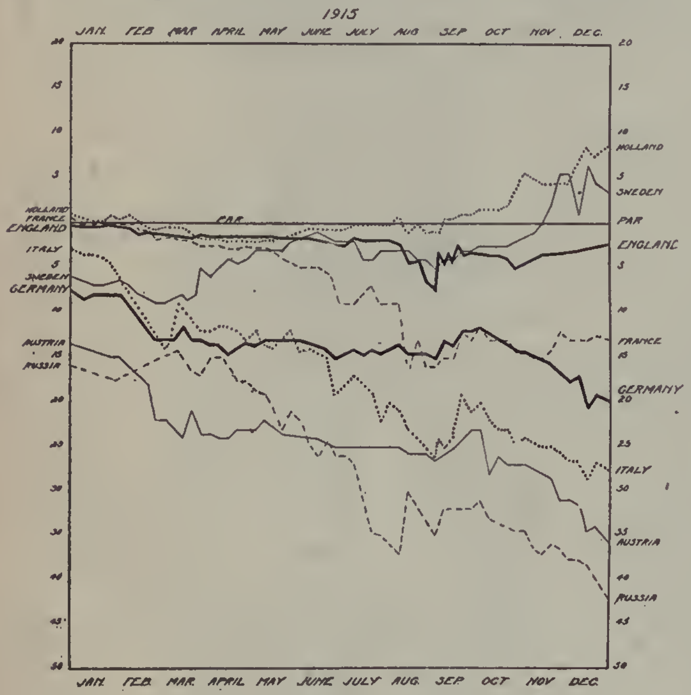
WHITE, ARTHUR V., Toronto.—Formerly consulting engineer with Brown Brothers, London, England, for whom he executed commissions in France, Belgium and the United States, travelling for a number of years extensively in connection therewith; later with Mr. R. A. Ross, of Montreal, for whom he executed work connected with the field investigations of the Ontario Power Commission, the precursor of the Hydro-Electric Power Commission of Ontario. Later, Mr. White was with Department of Public Works, Canada; for several years past he has been consulting engineer to International Joint Commission, Ottawa and Washington, on the Lake

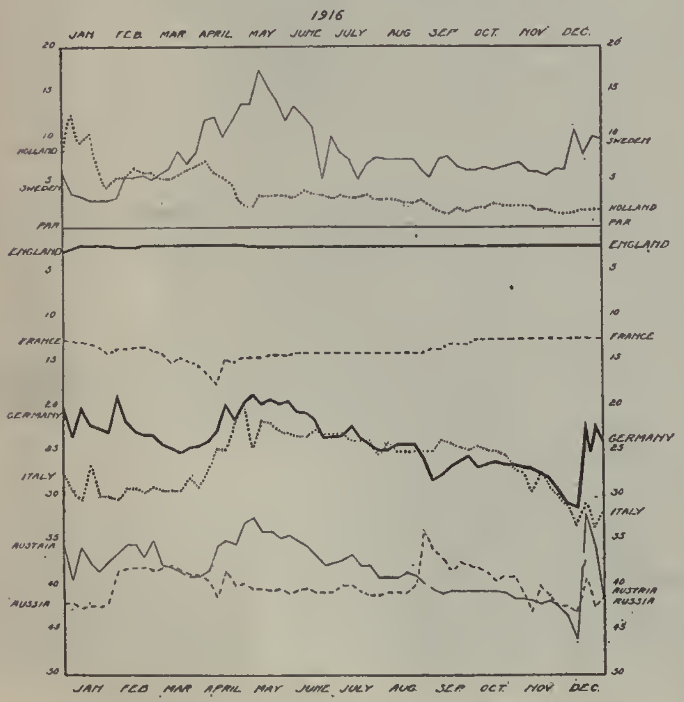
(Concluded on page 105.)

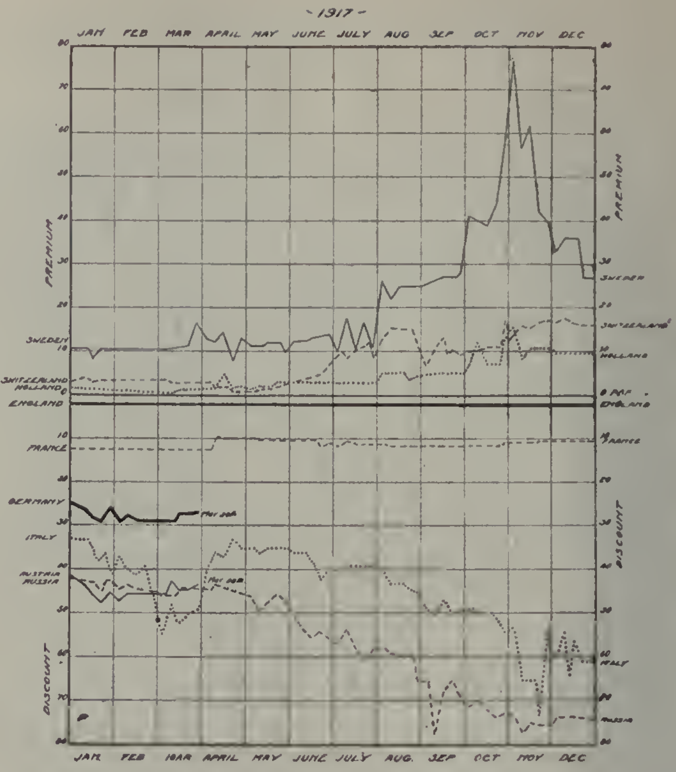
Fluctuations of Exchange Rates on European Countries in New York

(Charts compiled for The Monetary Times by W. J. Little, B.A., Victoria College, Toronto.)

The accompanying charts, especially compiled for *The Monetary Times*, show the fluctuations of exchange rates on European countries in New York. Among the interesting features revealed by an examination of the course of the curves is the splendid way in which the value of the English pound sterling has been maintained, despite the financial burdens carried by the United Kingdom for over three years of war and its heavy purchases in the United States. The declining value of the German mark is an indication of the serious position of Germany's finances. When the United States entered the war in April last the German mark was no longer quoted in New York. Austria is in a similar position in the exchange markets.







SILVER PRICES

Annual average price of a fine ounce of silver 1882-1916, based upon London quotations at par rate of exchange; also bullion value of 371¼ grains of pure silver (contents of one silver dollar) at the average annual prices of silver quoted.

(Data furnished by the Director of the United States Mint.)

Who's Who in The Monetary Times

(Continued from page 103.)

of the Woods investigation; also consulting engineer to Commission of Conservation, Canada. He has for many years persistently been urging that Canada take prompt and statesmanlike action with respect to her grave national fuel and power problems. (Page 25.)

WILCOX, W. J., Winnipeg.—Managing director, Canada Hail Insurance Company; partner, Carson & Williams Brothers, Limited, insurance agents and brokers; has had a long and varied insurance experience. (Page 224.)

WILLIAMS, E. B., Edmonton.—Solicitor to the attorney-general's department, Alberta. (Page 269.)

WILSON, J. T., Halifax.—Manager, Canada Life, Nova Scotia; president, Life Underwriters' Association of Canada; insurance career began with the Manufacturers' Life in Fredericton, N.B., in 1900, as a local agent; in New Glasgow, N.S., took district for the same company, and stayed with them until 1907, partly at New Glasgow and later on in Halifax in charge of a larger territory; assumed present position with Canada Life in 1908. (Page 200.)

WINTEMUTE, P. A., Calgary.—Manager, Southern Alberta, Manufacturers' Life Insurance Company; born, Haldimand County, Ont.; moved to Buffalo, 1892, remaining there as a salesman until 1903, when he went West; farmed for three years and entered the life insurance business, 1906, with the Manufacturers' Life Insurance Company, and has been with that company continuously since. Mr. Wintemute says: "My favorite pastime is writing life insurance applications, and reading 'The Monetary Times'."

WRIGHT, ALFRED, Toronto.—Has been with the London and Lancashire Fire Insurance Company, Limited, since 1882, and now occupies position of chief agent for Canada and manager of Toronto branch for that company; general agent of the Quebec Fire Assurance Company for the provinces of Ontario, Manitoba and Saskatchewan, and secretary of the Mercantile Fire Insurance Company. The two latter companies are subsidiary offices of the London and Lancashire; president of the London and Lancashire Guarantee and Accident Company, Limited. (Page 210.)

YOUNGE R. J., Montreal.—General manager of the Export Association of Canada; formerly associated with the Canadian Manufacturers' Association. (Page 262.)

Notable advances on prices of all farm products which have not been the subject of governmental regulation were a feature of the past year's trade in Canada.

It was stated at Ottawa last week that the railways of Canada will not be taken over by the government as has been done in the United States.

During the past year the Canadian Pacific Railway built over 10,000 box cars at the Angus Shops, Montreal, in addition to a large number of cars ordered from Canadian car manufacturing companies.

As a Christmas gift to their employees, the American Bank Note Company, of Ottawa, has arranged that each employee who has been with the company in Canada for more than one year will receive a life insurance policy for a substantial amount based upon length of service. The insurance went into effect at midnight of December 24th, 1917, the amount being based on wage received and length of service.

Notable Prospectuses of 1917

THE most notable war finance document of the past year was the war credits bill of the United States authorizing new bonds and certificates aggregating $11,538,000,000. This is the largest measure of its kind in the world's history. It was passed by the United States Senate on September 15th, 1917, without a roll call or a dissenting vote, it already having passed the United States House. The most important amendment of the Senate to the bill was that increasing from one-seventh to one-fourth of one per cent. of the bonds and war savings certificates authorized the expense allowance for their flotation and decreasing the allowance for the indebtedness certificates from one-tenth to one-twentieth of one per cent.

Two other amendments were also adopted. One fixed 4 per cent. as the maximum rate of interest on the $2,000,000,000 war savings certificates. Another provided that the reduction or increase of allotment of bonds should be made under general rules to be prescribed by the Secretary of the Treasury, and should apply to all subscribers similarly situated. The bill authorized $7,538,945,460 of new convertible 4 per cent. bonds, subject to income surtaxes and war excess-profit taxes. Of these, $4,000,000,000 are for new loans to the Allies, the remainder for the 3½ per cent. Liberty Loan, and to refund miscellaneous bond issues. Issuance of $2,000,000,000 of war savings certificates and the same amount of short-term Treasury certificates of indebtedness also was provided.

The British government's loan of $250,000,000, one and two-year 5½ per cent. secured convertible gold notes issued in the United States in January, 1917, was the last loan of its kind made by Great Britain in that market. After the United States entered the war, the United Kingdom was able to arrange credits in the United States with the government of that country and through the medium of Liberty Loan funds. In connection with this particular British loan, many railway, provincial government, Dominion government and municipal securities of Canada were pledged. The aggregate value of the pledged securities, including the Canadian securities, was not less than $300,000,000. The Canadian government at various times issued to the Imperial treasury its 3½ and 4 per cent. securities maturing in 1928 and 1945 in liquidation of the advances made by the Imperial government. Those securities were pledged by the Imperial government in New York and used with other securities as the basis of the large British loan noted above.

In this issue are printed the prospectuses of two Canadian domestic war loans, one made in March and one in November last year. This was the first year in which two domestic war loans were issued. The first internal war loan of $50,000,000 (later increased to $100,000,000) was issued in November, 1915, the second, of $100,000,000, in September, 1916, and the third and fourth on March 12th and November 12th respectively last year, both for $150,000,000.

In March, France put out a loan of $100,000,000 two-year 5½ per cent. secured convertible gold notes in the United States. This was the last loan of this kind issued by France, as that country now has the benefit of advances by the United States government through the medium of Liberty Loan funds.

We print in the following pages the official circular of the United States Treasury Department in regard to the first and second Liberty Loans. The first Liberty Loan, offered May 14th, 1917, consisted of $2,000,000,000 3½ per cent. United States government bonds maturing in 30 years. The second Liberty Loan, offered October 1st, 1917, consisted of $3,000,000,000 or more 4 per cent. United States government bonds maturing in 25 years, but callable by the government on any interest date after the tenth year.

The first act authorized a total issue of $5,538,945,460 in 3½ per cent. bonds. It also authorized the issue of $2,000,000,000 short-time treasury certificates of indebtedness, the character of these being quite distinct from the bonds.

The second act authorized a total issue of $7,538,945,460 in 4 per cent. bonds and cancels all unissued 3½ per cent. bonds authorized by the first act. Hence this act authorizes in fact $4,000,000,000 bonds over and above those authorized by the first act. The second act also authorized the issue of $4,000,000,000 certificates. Provision was also made for $2,000,000,000 war-savings certificates.

The bonds were sold direct from the United States treasury to the people. There was an appropriation of one-fifth of 1 per cent. for expenses for rent, clerk hire, postage, printing, etc., and the engraving of bonds; but no commission, brokerage, or profits were allowed.

The second Liberty Loan was oversubscribed by $1,617,532,300. There were 9,400,000 subscribers to the loan. The total subscriptions were $4,617,532,300. Of this amount 50 per cent. over the minimum of $3,000,000,000 was allotted. The total allotment was therefore $3,808,766,150.

A Canadian government loan of $100,000,000 two-year 5 per cent. notes was issued in the United States in August. This was the only such issue in that market and is the third Dominion loan floated there since war commenced.

In place of the 5 per cent. exchequer bonds 1922 of the United Kingdom, which were withdrawn from sale in September, a new series of bonds, to which the title of National War Bonds was given, was substituted. The new bonds are issued (for an unlimited amount in denominations of £50, £100, £200, £500, £1,000 and £5,000), at par, carrying interest at 5 per cent., but repayable at a premium in five, seven and ten years. There was also a tax-compounded 4 per cent. bond, repayable at par at the end of ten years. The national war bonds, it was reported in October, were selling at the rate of £20,000,000 weekly.

1. *British Government Loan of $250,000,000 1 and 2 Year 5½% Secured Convertible Gold Notes, at 99.52 and interest, and 99.07 and interest respectively. January, 1917*

$250,000,000
United Kingdom of Great Britain and Ireland

ONE-YEAR AND TWO-YEAR 5½% SECURED LOAN CONVERTIBLE GOLD NOTES

Dated February 1, 1917. **Interest payable February 1 and August 1.**

$100,000,000 One-Year Notes due February 1, 1918
$150,000,000 Two-Year Notes due February 1, 1919

Principal and interest payable at the office of J. P. Morgan & Co.

Convertible upon notice, at the option of the holder, at any time before maturity, or (if called for earlier redemption) at any time until and including the date of such redemption into Twenty-Year 5½% Bonds of the United Kingdom of Great Britain and Ireland, payable February 1, 1937, and not subject to prior redemption.

Principal and interest of the notes, and of the bonds into which they may be converted, is to be payable, without deduction for British taxes, present or future, in New York in United States gold coin, or, at the option of the holder, in London in sterling at the fixed rate of $4.86½ to the pound.

Coupon Notes in denomination of $1,000, $5,000 and $10,000.

Redeemable at the option of the Government, in whole or in part, on thirty (30) days' notice, as follows:

	One-Year Notes	Two-Year Notes
From February 1, 1917, to January 31, 1918	101 and interest	102 and interest
From February 1, 1918, to January 31, 1919		101 and interest

The notes are to be secured by pledge with Bankers Trust Company, New York, under a pledge agreement executed by the Government, of securities approved by J. P. Morgan & Co., of an aggregate value of not less than $300,000,000, calculated on the basis of the then prevailing markets, sterling securities being valued in dollars at the prevailing rate of exchange, viz.:

Group I. Stocks, bonds and-or other securities of American municipalities and corporations and of the Canadian Pacific Railway Company, and bonds and-or other obligations (either as maker or guarantor) of the Government of the Dominion of Canada, the Colony of Newfoundland, and-or Provinces of the Dominion of Canada, and-or approved Canadian municipalities: Aggregate value not less than $150,000,000
(Of the foregoing there will be somewhat over $100,000,000 in value in the securities of municipalities and corporations of the United States and of the Canadian Pacific Railway Company.)

Group II. Bonds and-or other obligations (either as maker or guarantor) of any or all of the several following Governments, to wit: Argentina, Chile, Cuba, Commonwealth of Australia, Egypt, Japan, New Zealand, and Union of South Africa, and-or bonds and-or other obligations of approved Railways in Argentina and-or of the Grand Trunk Railway Company of Canada, and-or approximately $25,000,000 value in bonds and-or other obligations of dividend-paying British railway companies: Aggregate value not less than $150,000,000

Total $300,000,000

Pending the arrival and deposit of definitive securities as above, the Government is to deposit temporarily with the Trust Company either approved New York Stock Exchange collateral or cash.

If the pledged securities depreciate in value, the Government is to deposit additional securities to maintain the 20% margin.

The Government is to reserve the right from time to time to sell for cash any of the pledged securities, the proceeds of sale to be applied to the retirement of notes by purchase or by redemption by lot.

Upon the retirement of the one-year notes, or upon reduction of the amount of notes outstanding, through conversion, a proportionate amount of the collateral may be withdrawn approximately ratably from each class.

The Government also from time to time may make substitutions of securities, but such substitutions are not to vary the then relative amounts in value of the groups. All substitutions, withdrawals and valuations of securities are to be approved by J. P. Morgan & Co.

This offering is made subject to the approval by our Counsel of necessary formalities

WE OFFER THE ABOVE NOTES FOR SUBSCRIPTION AS FOLLOWS:

The One-Year Notes at 99.52 and interest, yielding 6 per cent.
The Two-Year Notes at 99.07 and interest, yielding 6 per cent.

Subscription books will be opened at the office of J. P. Morgan & Co., at 10 o'clock A.M., January 24, 1917, and will be closed at 10 o'clock A.M., January 31, 1917, or earlier, in their discretion.

THE RIGHT IS RESERVED TO REJECT ANY AND ALL APPLICATIONS, AND ALSO, IN ANY EVENT, TO AWARD A SMALLER AMOUNT THAN APPLIED FOR.

AMOUNTS DUE ON ALLOTMENTS WILL BE PAYABLE AT THE OFFICE OF J. P. MORGAN & CO., IN NEW YORK FUNDS, TO THEIR ORDER, AND THE DATE OF PAYMENT WILL BE GIVEN IN THE NOTICES OF ALLOTMENT.

Temporary certificates will be delivered pending the preparation of the definitive notes.

2. *Canada's Third Domestic War Loan. March, 1917. $150,000,000 5% 20 Year Bonds at 96.*

WAR LOAN

DOMINION OF CANADA

Issue of $150,000,000 5 Per Cent. Bonds Maturing 1st March, 1937

PAYABLE AT PAR AT
OTTAWA, HALIFAX, ST. JOHN, CHARLOTTETOWN, MONTREAL, TORONTO, WINNIPEG, REGINA, CALGARY, VICTORIA, AND AT THE AGENCY OF THE BANK OF MONTREAL, NEW YORK CITY.

INTEREST PAYABLE HALF-YEARLY, 1st MARCH, 1st SEPTEMBER.
PRINCIPAL AND INTEREST PAYABLE IN GOLD.

ISSUE PRICE 96

A FULL HALF-YEAR'S INTEREST WILL BE PAID ON 1st SEPTEMBER, 1917.
THE PROCEEDS OF THE LOAN WILL BE USED FOR WAR PURPOSES ONLY.

The Minister of Finance offers herewith, on behalf of the Government, the above-named Bonds for subscription at 96, payable as follows:—

10 per cent. on application;
30 per cent. on 16th April, 1917;
30 per cent. on 15th May, 1917;
26 per cent. on 15th June, 1917.

The total allotment of bonds of this issue will be limited to one hundred and fifty million dollars, exclusive of the amount (if any) paid for by the surrender of bonds as the equivalent of cash under the terms of the War Loan prospectus of 22nd November, 1915.

The instalments may be paid in full on the 16th day of April, 1917, or on any instalment due date thereafter, under discount at the rate of four per cent. per annum. All payments are to be made to a chartered bank for the credit of the Minister of Finance. Failure to pay any instalment when due will render previous payments liable to forfeiture and the allotment to cancellation.

Subscriptions, accompanied by a deposit of ten per cent. of the amount subscribed, must be forwarded through the medium of a chartered bank. Any branch in Canada of any chartered bank will receive subscriptions and issue provisional receipts.

This loan is authorized under Act of the Parliament of Canada, and both principal and interest will be a charge upon the Consolidated Revenue Fund.

Forms of application may be obtained from any branch in Canada of any chartered bank and at the office of any Assistant Receiver General in Canada.

Subscriptions must be for even hundreds of dollars.

In case of partial allotments the surplus deposit will be applied towards payment of the amount due on the April instalment.

Scrip certificates, non-negotiable or payable to bearer in accordance with the choice of the applicant for registered or bearer bonds, will be issued after allotment, in exchange for the provisional receipts.

When the scrip certificates have been paid in full and payment endorsed thereon by the bank receiving the money, they may be exchanged for bonds, when prepared, with coupons attached, payable to bearer or registered as to principal, or for fully registered bonds, when prepared, without coupons, in accordance with the application.

Delivery of scrip certificates and of bonds will be made through the chartered banks.

The issue will be exempt from taxes—including any income tax—imposed in pursuance of legislation enacted by the Parliament of Canada.

The bonds with coupons will be issued in denominations of $100, $500, $1,000. Fully registered bonds without coupons will be issued in denominations of $1,000, $5,000 or any authorized multiple of $5,000.

The bonds will be paid at maturity at par at the office of the Minister of Finance and Receiver General at Ottawa, or at the office of the Assistant Receiver General at Halifax, St. John, Charlottetown, Montreal, Toronto, Winnipeg, Regina, Calgary, or Victoria, or at the Agency of the Bank of Montreal, New York City.

The interest on the fully registered bonds will be paid by cheque, which will be remitted by post. Interest on bonds with coupons will be paid on surrender of coupons. Both cheques and coupons, at the option of the holder, will be payable free of exchange at any branch in Canada of any chartered bank, or at the Agency of the Bank of Montreal, New York City.

Subject to the payment of twenty-five cents for each new bond issued, holders of fully registered bonds without coupons will have the right to convert into bonds of the denomination of $1,000 with coupons, and holders of bonds with coupons will have the right to convert into fully registered bonds of authorized denominations without coupons at any time on application to the Minister of Finance.

The books of the loan will be kept at the Department of Finance, Ottawa.

Application will be made in due course for the listing of the issue on the Montreal and Toronto Stock Exchanges.

Recognized bond and stock brokers having offices and carrying on business in Canada will be allowed a commission of three-eighths of one per cent. on allotments made in respect of applications bearing their stamp; provided, however, that no commission will be allowed in respect of the amount of any allotment paid for by the surrender of bonds issued under the War Loan prospectus of 22nd November, 1915, or in respect of the amount of any allotment paid for by surrender of five per cent. debenture stock maturing 1st October, 1919. No commission will be allowed in respect of applications on forms which have not been printed by the King's Printer.

Subscription Lists will close on or before the 23rd March, 1917.

Department of Finance, Ottawa, March 12th, 1917

3. *French Government Loan in United States of $100,000,000 5½% 2 Year Secured Convertible Gold Notes at 99 and interest. March, 1917.*

$100,000,000

Government of the French Republic

TWO-YEAR 5½% SECURED LOAN CONVERTIBLE GOLD NOTES

Dated April 1, 1917 Interest payable April 1 and October 1 Due April 1, 1919

Principal and interest payable at the office of J. P. Morgan & Co.

Coupon Notes in denominations of $1,000, $5,000 and $10,000.

Convertible at par, upon notice, at the option of the holder, at any time before maturity, into Twenty-Year 5½% Bonds of the Government of the French Republic, payable April 1, 1937, and not subject to prior redemption.

Principal and interest of the notes, and of the bonds into which they may be converted, are to be payable without deduction for French taxes, present or future, in New York City in United States Gold Coin. Principal and interest of the notes are also to be payable, at the option of the holder, in Paris in francs at the fixed exchange rate of Fcs. 5.75 to the dollar, without deduction for French taxes.

In connection with the provision for optional collection in francs, it may be noted that this feature amounts to a call on French Exchange for two years at a rate of Fcs. 5.75; this being about ten per cent. below mint parity, Fcs 5.18⅛, at or near which figure Exchange ruled prior to the disorganization of foreign markets brought about by the War. Such additional profit from the exchange feature as may accrue to the holders of these Notes will involve no increased interest cost to the promissor, but will be consequent upon such improvement in trade and Exchange conditions as may occur during the coming two years.

The Notes are to be secured by pledge with Central Trust Company of New York, of securities approved by J. P. Morgan & Co., valued in the aggregate at not less than $120,000,000, of which approximately $20,000,000 in value is to consist of securities of American corporations and municipalities (including securities of the Canadian Pacific Railway Company), and the remainder is to consist of obligations (either direct or through guaranty) of the following Governments: Argentine, Uruguay, Brazil (Funding Loan), Switzerland, Holland, Spain, Egypt, Province of Quebec, Denmark, Norway and Sweden (including certain bonds of Mortgage Banks in the last three countries, operated under Government supervision, and quoted customarily on a parity with the obligations of their respective Governments); also bonds of the State of Berne, Switzerland, bonds of the City of Stockholm, Sweden, and bonds and shares of Spanish railway companies and of the Suez Canal Company.

Provision is to be made in the pledge agreement for the maintenance of the 20% margin; for temporary lodgment of cash pending the arrival and deposit of all the collateral; for the holding by depositaries in France of such coupons from the pledged securities as mature prior to April 1, 1919; for the sale of collateral and purchase of notes with the proceeds; for proportionate withdrawals of collateral as notes are converted; and for substitutions of collateral approved by J. P. Morgan & Co., the amount of American collateral, however, not to be reduced through any such substitution.

This offering is made subject to the approval by our counsel of the necessary formalities.

WE OFFER THE ABOVE NOTES FOR SUBSCRIPTION AT 99 AND INTEREST, YIELDING SLIGHTLY OVER 6%.

Subscription books will be open at the office of J. P. Morgan & Co., at 10 o'clock A.M., Thursday, March 22, 1917, and will be closed at 10 o'clock A.M., Wednesday, March 28, 1917, or earlier in their discretion.

The right is reserved to reject any and all applications, and also, in any event, to award a smaller amount than applied for.

Amounts due on allotments will be payable at the office of J. P. Morgan & Co., in New York funds, to their order, and the date of payment will be given in the notices of allotment.

Temporary certificates will be delivered pending the engraving of the definitive notes.

Application will be made to list the above notes on the New York Stock Exchange.

4.

First Liberty Loan of the United States $2,000,000,000 15-30 Year 3½% Gold Bonds at par. May, 1917.

LIBERTY LOAN

1917.
Department Circular No. 78.

Loans and Currency.

TREASURY DEPARTMENT,
Office of the Secretary,
Washington, May 14, 1917.

The Secretary of the Treasury invites subscriptions at par and accrued interest from the people of the United States of America for $2,000,000,000 of the 15-30 Year 3½ Per Cent. Gold Bonds of an issue authorized by Act of Congress approved April 24, 1917.

DESCRIPTION OF BONDS.

Bearer bonds, with interest coupons attached, will be issued in denominations of $50, $100, $500 and $1,000. Bonds registered as to principal and interest will be issued in denominations of $100, $500, $1,000, $5,000, $10,000, $50,000 and $100,000. Provision will be made for the interchange of bonds of different denominations and of coupon and registered bonds, upon payment, if the Secretary of the Treasury shall require, of a charge not exceeding $1 for each new bond issued upon such exchange. Transfers of registered bonds and exchanges of registered and coupon bonds and of bonds of different denominations will not be made until October 1, 1917, or such later data as may be designated by the Secretary of the Treasury.

The bonds will be dated June 15, 1917, and will bear interest at the rate of 3½ per centum per annum from that date, payable semi-annually on December 15 and June 15. The bonds will mature June 15, 1947, but the issue may be redeemed on or after June 15, 1932, in whole or in part, at par and accrued interest, on three months' published notice, on any interest day; in case of partial redemption the bonds to be redeemed to be determined by lot by such method as may be prescribed by the Secretary of the Treasury. The principal and interest of the bonds will be payable in United States gold coin of the present standard of value, and the bonds will be exempt, both as to principal and interest from all taxation, except estate or inheritance taxes, imposed by authority of the United States or its possessions, or by any State or local taxing authorities. The bonds will not bear the circulation privilege, but will be receivable as security for deposits of public money.

If any subsequent series of bonds (not including Treasury certificates of indebtedness and other short-term obligations) shall be issued by the United States at a higher rate of interest than three and one-half per centum per annum before the termination of the war between the United States of America and the Imperial German Government (the date of such termination to be fixed by a proclamation of the President of the United States), the holders of any of the bonds of the present issue shall have the privilege of converting the same, within such period and upon such further terms and conditions covering matters of detail as the Secretary of the Treasury may prescribe, into an equal par amount of bonds bearing such higher rate of interest and substantially identical with the bonds of such new series, except that the bonds issued upon such conversion are to be identical with the bonds of the present series as to maturity of principal and interest and terms of redemption.

APPLICATIONS.

The agencies designated by the Secretary of the Treasury to receive applications for the bonds now offered are the Treasury Department in Washington, D.C., and the Federal Reserve Banks in Boston, New York, Philadelphia, Cleveland, Richmond, Atlanta (with branch at New Orleans), Chicago, St. Louis, Minneapolis, Kansas City, Dallas and San Francisco. Said banks have been designated, also, as fiscal agents of the United States, to collate applications and to give notices of the allotments which the Secretary of the Treasury will eventually make to subscribers and to issue interim certificates for payments made on allotted subscriptions.

Large numbers of National banks, State banks and trust companies, private bankers, express companies, newspapers, department stores, and other private corporations, firms and organizations, have patriotically offered to receive and transmit applications for the Liberty Loan without expense to the United States or to the applicants. The Secretary of the Treasury, appreciating the value of these offers, will have application blanks widely distributed throughout the country to these private institutions and also to the post offices and sub-treasuries. Individual subscribers may use these conveniences or may send their applications directly to the Treasury Department at Washington and to the Federal Reserve Banks. As the law prohibits the allowance or payment of commissions on subscriptions all those through whom applications are made render service as a patriotic duty without compensation.

All applications must be in the form prescribed by the Secretary of the Treasury and be accompanied by a payment of 2 per centum of the amount of bonds applied for. Applications must be for $50 or any multiple thereof, but any application for one $50 or $100 bond until further notice may be allotted at once and payment in full accepted against delivery of an interim certificate. Applications must reach the Treasury Department or a Federal Reserve Bank not later than noon, June 15, 1917, the right being reserved by the Secretary of the Treasury to close the subscription on any earlier date.

ALLOTMENTS.

Allotments will be made as soon after June 15 as possible. The Secretary of the Treasury reserves the right to reject any subscriptions, or to make allotment of part of the amount subscribed for, and to allot in full upon applications for smaller amounts of bonds even though it may be necessary to reduce allotments on applications for larger amounts, should any such action be deemed by him to be in the public interest; and his decision in these respects will be final. In any case of the rejection of an application, the accompanying payment of 2 per centum of the amount applied for will be returned. In case of partial allotment the 2 per centum payment will be retained and any excess applied upon the next installment. Upon allotment of bonds by the Secretary of the Treasury, the subscriber will receive notice thereof signed by or on behalf of the Federal Reserve Bank of his district. Unless and until payment in full has been made, further payments must be made when and as below provided under penalty of forfeiture of any and all installments previously paid and of all right or interest in the bonds allotted.

PAYMENTS.

The dates for payments in installments are as follows:
Two per centum on application;
Eighteen per centum on June 28, 1917;
Twenty per centum on July 30, 1917;
Thirty per centum on August 15, 1917;
Thirty per centum on August 30, 1917.

It is strongly recommended that subscribers avail themselves of the assistance of their own banks and trust companies. In cases where they do not do so, subscribers should make payment, either in cash to the Treasury Department in Washington or one of the Federal Reserve Banks, or by bank draft, check, post-office money order, or express company money order, made payable to the order of the Treasurer of the United States if the application is filed with the Treasury Department in Washington (thus: "Treasurer of the United States, Liberty Loan Account"), or, if the application is filed elsewhere, made payable to the order of the Federal Reserve Bank of the district in which the application is filed (thus: "Federal Reserve Bank of ...., Liberty Loan Account"). All checks must be certified. United States certificates of indebtedness issued under the Act of April 24, 1917, will be received at par and accrued interest to date of settlement in making payment in full or in installments.

Interim certificates for installment payments due on or after June 28 will be issued by or on behalf of the Federal Reserve Banks as fiscal agents of the United States, and delivered as far as practicable in accordance with written instructions given by subscribers. Upon payment of the installment due June 28, the notice of allotment must be surrendered, and upon payment of each subsequent installment the interim certificate must be presented to the Federal Reserve Bank which issued the certificate for notation thereon of the fact of such payment, or for exchange for a new certificate. After full payment such certificates must be surrendered in exchange for the bonds when prepared.

Payments of installments must be made upon the dates above stated until full payment has been made. Payment in full may be made on and after allotment and before August 30, 1917, if two weeks' prior notice in writing of the intention to make such payment, stating the date upon which such payment will be made, shall have been filed with the Federal Reserve Bank of the district in which the subscriber will make payment; but such notice shall not be required in case of any allotment of not exceeding $10,000 bonds or when payment is to be made in Treasury certificates of indebtedness.

As the bonds will carry six months' interest payable December 15, 1917, interest accruing on the bonds allotted, from June 15, 1917, to the date of full and final payment, must be added to the last payment, credit being given for interest at the like rate upon the several installment payments as follows: as to 2 per centum of the amount of bonds allotted upon application, from June 15, 1917, and, as to subsequent installments duly paid, from the respective dates upon which payment thereof is required to be made as above provided. Tables showing the amount of accrued interest payable on August 30 in case payment is made in installments, and the amount of accrued interest payable upon various dates in case payment is made in full prior to August 30 as herein permitted, will be prepared and furnished through the Treasury Department in Washington and the Federal Reserve Banks.

Within the United States and its territories and insular possessions, bonds when prepared will be delivered so far as practicable in accordance with the written instructions of the holders of the interim certificates upon surrender to the Treasury Department in Washington, or the Federal Reserve Bank which issued the certificate, of interim certificates full paid or accompanied by payment of the final installment. The expense of delivery will be borne by the United States. Delivery of definitive bonds to holders of full paid interim certificates will commence as soon as practicable after June 28.

Further details may be announced by the Secretary of the Treasury from time to time, information as to which, as well as forms for applications, may be obtained from the Treasury Department and any Sub-Treasury or Federal Reserve Bank.

W. G. McADOO, Secretary of the Treasury.

Subscriptions for these bonds are being received at any of the Federal Reserve Banks, the banking institutions and all the investment banking firms in the United States.

5. *Canadian Government Loan in the United States of $100,000,000 2 Year 5% Gold Notes at 98 and interest. July 30, 1917.*

Issue of NATIONAL WAR BONDS

£5 Per Cent. BONDS. Repayable 1st October, 1922, at 102 Per Cent.;
£5 Per Cent. BONDS. Repayable 1st October, 1924, at 103 Per Cent.;
£5 Per Cent. BONDS. Repayable 1st October, 1927, at 105 Per Cent.;
AND
£4 Per Cent. BONDS. Repayable 1st October, 1927, at 100 Per Cent.;
("Income Tax Compounded.")

Interest payable half-yearly on the 1st APRIL and 1st OCTOBER. First Dividend payable 1st APRIL, 1918.

PRICE OF ISSUE £100 PER CENT.

PAYABLE ON APPLICATION.

THE GOVERNOR AND COMPANY OF THE BANK OF ENGLAND are authorised by the Lords Commissioners of His Majesty's Treasury to receive on the 2nd October, 1917, and thereafter until further notice, applications for the above Bonds. Applications may be lodged at any Office of the Banks hereafter mentioned.

The Principal and Interest of the Bonds are chargeable on the Consolidated Fund of the United Kingdom.

Bonds of this issue, and the interest payable from time to time in respect thereof, will be exempt from all British taxation, present or future, if it is shown in the manner directed by the Treasury that they are in the beneficial ownership of a person who is neither domiciled nor ordinarily resident in the United Kingdom of Great Britain and Ireland.

Further, the interest payable from time to time in respect of £5 per cent. Bonds of this issue will be exempt from British Income Tax, present or future, if it is shown in the manner directed by the Treasury that the Bonds are in the beneficial ownership of a person who is not ordinarily resident in the United Kingdom of Great Britain and Ireland, without regard to the question of domicile. Where such a Bond is in the beneficial ownership of a person entitled to exemption under these provisions the relative Coupons will be paid without deduction for Income Tax or other taxes, if accompanied by a declaration of ownership in such form as may be required by the Treasury.

Interest on the £4 per cent. Bonds will be exempt from liability to assessment to British Income Tax other than Super-Tax. For the purposes of Super-Tax and in computing total income for the purposes of Exemption, Abatement, reduced rate of Income Tax on earned or unearned income, etc., the income derived from such interest will be treated as if the amount received represented the net income after deduction of Income Tax at the full normal rate. There will, however, be no title to repayment of Income Tax in respect of such untaxed interest.

Bonds of this issue will be accepted at their nominal value, with due allowance for any unpaid interest thereon, by the Commissioners of Inland Revenue in satisfaction of amounts due on account of Death Duties, Excess-Profits Duty or Munitions Exchequer Payments; provided, in the case of Death Duties, that such Bonds have formed part of the Estate of the deceased continuously up to the date of death from the date of the original subscription or for a period of not less than six months immediately preceding the date of death, and, in the case of Excess Profits Duty or Munitions Exchequer Payments, that they have been held continuously by the firm, company or other person, liable for such Duty or Payment, since the date of the original subscription or for a period of not less than six months before such Duty or Payment becomes due and payable.

Holders of £5 per cent. Bonds of this issue may convert their holdings within 14 days after any half-yearly interest date (viz., 1st April and 1st October), and as on such interest date, into £5 per Cent. War Loan, 1929-1947, at the rate of £100 £5 per cent. War Loan, 1929-1947, for each £95 nominal value (excluding any redemption premium) of £5 per Cent. National War Bonds surrendered; and holders of £4 per Cent. Bonds of this issue may convert their holdings at the same times, and in like manner, into £4 per Cent. War Loan, 1929-1942 ("Income Tax Compounded") at the rate of £100 £4 per Cent. War Loan, 1929-1942, for each £100 nominal value of £4 per Cent. National War Bonds surrendered.

The first dividend on a holding of £5 per Cent. War Loan, 1929-1947, or of £4 per Cent. War Loan, 1929-1942, issued in lieu of National War Bonds converted, will represent interest from the date of conversion to the next succeeding interest date of the Loan into which the Bonds have been converted.

In the event of future issues (other than issues made abroad or issues of Exchequer Bonds, Treasury Bills, or similar short-dated Securities) being made by His Majesty's Government, for the purpose of carrying on the War, Bonds of this issue will be accepted at par as the equivalent of cash for the purpose of subscriptions to such issues, and an allowance will be made for any interest accrued on Bonds so accepted.

The Bonds will be issued in denominations of £50, £100, £200, £500, £1,000 and £5,000, and the interest thereon will be payable half-yearly by Coupon, the first Coupon on each Bond representing interest from the date on which application is lodged and payment made for the Bond at any office of one of the Banks hereafter mentioned.

Bonds of this issue may be registered free of cost in the Books of the Bank of England, or of the Bank of Ireland, as

1. "Transferable in the Bank Transfer Books," or
2. "Transferable by Deed."

Allotments may be obtained in Registered Form or in Bonds to Bearer at the option of the applicant.

Holdings of Registered Bonds, which will be transferable in any sums which are multiples of a penny, may be re-converted at any time, in whole or in part (in multiples of £50), into Bonds to bearer with Coupons attached.

Dividends on Registered £5 per Cent. Bonds of this issue will be paid without deduction of Income Tax, but the income derived from such dividends will be assessable to Income Tax in the hands of the recipients at the rates of tax appropriate to their respective incomes. Dividend Warrants will be transmitted by post.

Applications for Bonds, which must in every case be accompanied by payment of the full amount payable in respect of the Bonds Applied for, may be lodged at any office of the following Banks at any time at which such offices are open for business, viz.: (Then follow the names of 69 Banks), or they may be forwarded by post to the Bank of England Loans Office, 5 and 6, Lombard Street, E.C. 3.

CONVERSION OF

£4 10s per Cent. War Loan, 1925-1945.
£5 per Cent. Exchequer Bonds, 1919.
£5 per Cent. Exchequer Bonds, 1920.
£5 per Cent. Exchequer Bonds, 1921.
£6 per Cent. Exchequer Bonds, 1920.

Holders of the above issues, in pursuance of the options granted in the several Prospectuses relating thereto, may convert their holdings, in whole or in part, into the following Bonds of the present issue, at any time during the continuance of the issue of such Bonds, viz.:—

£5 per Cent. National War Bonds, repayable 1st October, 1924;
£5 per Cent. National War Bonds, repayable 1st October, 1927; or
£4 per Cent. National War Bonds, repayable 1st October, 1927 ("Income Tax compounded.")

Holders who convert will receive an allotment at the rate of £100 National War Bonds for each £100 £4 10s per Cent. War Loan or Exchequer Bonds converted.

National War Bonds issued in exchange for converted holdings will carry interest from the dates on which the relative requests for conversion have been lodged with the Bank of England. A separate dividend will be paid for interest, if any, accrued to date of conversion on a converted holding. Where a request for conversion of a holding in any issue, whether "registered" or "to bearer," is lodged after the balance of such issue has been struck for the preparation of a dividend and before the date on which the said dividend is due, such conversion will be effected as on the latter date.

N.B.—Applications for the conversion of Stock inscribed or Bonds registered in the Books of the Bank of Ireland, should be forwarded to the Bank of Ireland, Dublin.

Stock registered in the Books of the General Post Office, and Bonds issued by the General Post Office, will not be convertible at the Bank of England. They will be convertible at the Post Office under the arrangements set forth in the separate Prospectus issued by H.M. Postmaster-General.

A commission of one-eighth per cent. will be allowed to Bankers, Stockbrokers and Financial Houses on allotments made in respect of cash applications for this issue bearing their Stamp, but no commission will be allowed in respect of applications for conversion.

Applications must be made upon the printed forms which may be obtained, together with copies of this Prospectus, at the Bank of England; at the Bank of Ireland; of Messrs. Mullens, Marshall & Co., 13, George Street, Mansion House, E.C. 4; and at any Bank, Money Order Office or Stock Exchange in the United Kingdom.

BANK OF ENGLAND, LONDON,
1st October, 1917.

7. *Second Liberty Loan of the United States $3,000,000,000 10-25 Year 4% Convertible Gold Bonds. October 1, 1917*

$3,000,000,000

UNITED STATES OF AMERICA

10-25 YEAR 4% CONVERTIBLE GOLD BONDS

SECOND LIBERTY LOAN

Bearing interest from November 15, 1917 **Due November 15, 1942**

Redeemable at the option of the United States, at par and accrued interest, on and after November 15, 1927

Interest payable May 15 and November 15

Authorized by an act of Congress approved September 24, 1917. Offered for subscription in Department Circular No. 90, dated October 1, 1917, to be found on the following pages, to which reference is made for full information concerning the bonds and this offering, and from which the statements on this page are summarized.

DENOMINATIONS: Coupon and registered bonds, $50, $100, $500, $1,000, $5,000, $10,000; and registered bonds of $50,000 and $100,000.

EXEMPT as to principal and interest from all taxation by the United States, any State, or any of the possessions of the United States, or by any local taxing authority, except (*a*) estate or inheritance taxes, and (*b*) United States graduated additional income taxes (commonly known as surtaxes) and excess-profits and war-profits taxes. The interest on an amount of bonds and certificates authorized by said act, the principal of which does not exceed in the aggregate $5,000, owned by any individual, partnership, association, or corporation, shall be exempt from the taxes provided for in clause (*b*) above.

CONVERTIBLE upon the terms and conditions stated in said circular into higher rate bonds if and when higher rate bonds are next issued during the war.

APPLICATIONS must reach the Treasury Department, Washington, D.C., a Federal Reserve Bank or branch thereof, or some incorporated bank or trust company within the United States (not including outlying territories and possessions) on or before the close of business October 27, 1917, the right being reserved by the Secretary of the Treasury to close the subscriptions at any earlier date.

TERMS OF PAYMENT:

2 per cent. with application.
18 per cent. on November 15, 1917.
40 per cent. on December 15, 1917.
40 per cent. on January 15, 1918 (with accrued interest on both deferred installments).

Payment in full of any subscription for an amount of bonds not in excess of $1,000, at face value without interest, may be made with the application, if the subscriber prefers, in which case prompt delivery of a bond or bonds dated and bearing interest from November 15, 1917, will be made. Except in such cases payment for the amount allotted can only be completed on November 15, or, with accrued interest, on December 15 or January 15, previous installments having been duly paid.

ALLOTMENT: Subscriptions for $3,000,000,000 of these bonds are invited, the right being reserved to allot additional bonds up to one-half the amount of any over-subscription. Every subscriber for an amount of bonds not in excess of $1,000 will receive the full amount of bonds subscribed for. Other applications are received subject to allotment.

DELIVERY: Bonds as described in the circular will be delivered promptly upon completion of payments

PRICE, 100% AND ACCRUED INTEREST

TREASURY DEPARTMENT, *Washington, October, 1, 1917.*

8. *Canada's Victory Loan of $150,000,000 5½% Gold Bonds at par. November, 1917*

The MINISTER OF FINANCE offers for Public Subscription

Canada's Victory Loan

Issue of

$150,000,000 5½% Gold Bonds

Bearing interest from December **1st, 1917**, and offered in three maturities, the choice of which is optional with the subscriber, as follows:

5 year Bonds due December 1st, 1922
10 year Bonds due December 1st, 1927
20 year Bonds due December 1st, 1937

This Loan is authorized under Act of the Parliament of Canada, and both principal and interest are a charge upon the Consolidated Revenue Fun

The amount of this issue is $150,000,000, exclusive of the amount (if any) paid by the surrender of bonds of previous issues. The Minister of Finan however, reserves the right to allot the whole or any part of the amount subscribed in excess of $150,000,000.

The Proceeds of this Loan will be used for War purposes only, and will be spent wholly in Canada.

Principal and Interest payable in Gold
Denominations: $50, $100, $500 and $1,000

Subscriptions must be in sums of $50 or multiples thereof.

Principal payable without charge at the Office of the Minister of Finance and Receiver General at Ottawa, or at the Office of the Assistant Recei General at Halifax, St. John, Charlottetown, Montreal, Toronto, Winnipeg, Regina, Calgary and Victoria.

Interest payable, without charge, half-yearly, June 1st and December 1st, at any branch in Canada of any Chartered Bank.

Bearer or Registered Bonds

Bonds may be registered as to principal or as to principal and interest.

Scrip certificates, non-negotiable, or payable to bearer, in accordance with the choice of the applicant for registered or bearer bonds, will be issued aft allotment in exchange for provisional receipts. When these scrip certificates have been paid in full, and payment endorsed thereon by the bank receiving the mone they may be exchanged for bonds, when prepared, with coupons attached, payable to bearer, or registered as to principal, or for fully registered bonds whe prepared, without coupons, in accordance with the application.

Delivery of interim certificates and of definitive bonds will be made through the Chartered Banks.

Bearer bonds with coupons will be issued in denominations of $50., $100., $500., and $1,000. and may be registered as to principal only. Fully registered bonds, the interest on which is paid direct to the owner by Government cheque, will be issued in denominations of $1,000., $5,000. or any authorize multiple of $5,000.

Subject to the payment of 25 cents for each new bond issued, holders of fully registered bonds without coupons, will have the right to convert into bond of the denomination of $1,000 with coupons, and holders of bonds with coupons will have the right to convert into fully registered bonds of authorized denominations without coupons, at any time, on application to the Minister of Finance.

Surrender of Bonds

Holders of Dominion of Canada Debenture Stock, due October 1st, 1919, and bonds of the three preceding Dominion of Canada War Loan Issues have the privilege of surrendering their bonds in part payment for subscriptions to bonds of this issue, under the following conditions:—

Debenture Stock, due October 1st, 1919, at Par and Accrued Interest.
War Loan Bonds, due December 1st, 1925, at 97½ and Accrued Interest.
(The above will be accepted in part payment for bonds of any of the three maturities of this Issue)

War Loan Bonds, due October 1st, 1931, at 97½ and Accrued Interest.
War Loan Bonds, due March 1st, 1937, at 96 and Accrued Interest.
(These will be accepted in part payment for bonds of the 1937 maturity ONLY of this Issue.)

Bonds of the various maturities of this issue will, in the event of future issues of like maturity, or longer, made by the Government, other than issu made abroad, be accepted at par and accrued interest, as the equivalent of cash for the purpose of subscription to such issues.

Issue Price Par

Free from taxes—including any income tax—imposed in pursuance of legislation enacted by the Parliament of Canada.

Payment to be made as follows:

10%	on December 1st, 1917	20%	on March 1st, 1918
10%	on January 2nd, 1918	20%	on April 1st, 1918
20%	on February 1st, 1918	20%	on May 1st, 1918

A full half year's interest will be paid on 1st June, 1918.

The Bonds therefore give a net interest yield to the investor of about:

5.61% on the 20 year Bonds
5.68% on the 10 year Bonds
5.81% on the 5 year Bonds

All payments are to be made to a Chartered Bank for the credit of the Minister of Finance. Failure to pay any instalment when due will render previous payments liable to forfeiture, and the allotment to cancellation. Subscriptions accompanied by a deposit of 10% of the amount subscribed, must be forwarded through the medium of a Chartered Bank. Any branch in Canada of any Chartered Bank will forward subscriptions and issue provisional receipts.

In case of partial allotments the surplus deposit will be applied toward payment of the amount due on the January instalment.

Subscriptions may be paid in full on January 2nd, 1918, or on any instalment due date thereafter under discount at the rate of 5¼% per annum. Under this provision payments of the balance of subscriptions may be made as follows:

If paid on January 2nd, 1918, at the rate of 89.10795 per $100.
If paid on February 1st, 1918, at the rate of 79.46959 per $100.
If paid on March 1st, 1918, at the rate of 59.72274 per $100.
If paid on April 1st, 1918, at the rate of 39.90959 per $100.

Forms of application may be obtained from any branch in Canada of any Chartered Bank, or from any Victory Loan Committee, or member thereof.
The books of the Loan will be kept at the Department of Finance, Ottawa.
Applications will be made in due course for the listing of this issue on the Montreal and Toronto Stock Exchanges.

Department of Finance,
Ottawa, November 12th, 1917.

Subscription Lists will close on or before December 1st, 1917.

Business Profits and Income Taxes in Operation

Taxation of Incomes Over $1,500 Begins Next Month—Details and Explanations of the Measures

LAST year witnessed the establishment of income tax legislation in Canada. It is not proposed to substitute the income tax for the Business Profits War Tax Act, but to use both measures at present. Up to the end of 1918, the situation remains as it is for the reason that, although the Business Profits War Tax Act expired at the end of 1917, the tax on last year's profits will be paid this year. If the war should continue beyond this year, it will be the duty of parliament, said the minister of finance, to re-enact the measure. If the war should end before 1919, the country would hardly desire to carry forward such a heavy impost during the days of reconstruction. During the current year, companies will pay whichever is the heavier tax of the two, the income tax or the business profits tax.

The following statement in regard to the amendment to the business profits war tax act was issued by the department of finance, Ottawa, on May 16th, 1917: "In the discussion of the budget amendment to the business profits war tax act, by which a greater percentage of excess profits is taken by the government to assist in meeting its war expenses, it was made clear by the minister of finance that the liability to taxation under the business profits war tax act ceases at the end of the present year, and that the proposed increased taxation applies only to the last annual accounting period of three accounting periods to which the act of last year applies.

"To be precise, the increased taxation will affect only annual accounting periods which end after December 31st last. That is to say, for example, if a company's accounting period ends on May 31st of this year the company will pay the increased tax in respect of its fiscal year beginning June 1st, 1916, and ending May 31st, 1917, and it will not be liable upon its profits earned after May 31st, 1917. The new taxes therefore cannot apply to new companies about to establish themselves in Canada."

PROVISIONS OF INCOME TAX

Definition of Income—How the Tax Works

The income tax law provides that there shall be assessed, levied and paid upon the income during the preceding year of every person residing or ordinarily a resident in Canada or carrying on any business in Canada, the following taxes:—

(a) 4 per cent. upon all incomes exceeding $1,500 in the case of unmarried persons and widows or widowers without dependent children, and exceeding $3,000 in the case of all other persons; and

(b) 2 per cent. upon the amount by which the income exceeds $6,000 and does not exceed $10,000; and

(c) 5 per cent. upon the amount by which the income exceeds $10,000 and does not exceed $20,000; and

(d) 8 per cent. of the amount by which the income exceeds $20,000 and does not exceed $30,000; and

(e) 10 per cent. of the amount by which the income exceeds $30,000 and does not execed $50,000; and

(f) 15 per cent. of the amount by which the income exceeds $50,000 and does not exceed $100,000; and

(g) 25 per cent. of the amount by which the income exceeds $100,000.

Corporations and Joint Stock Companies.

(2) Corporations and joint-stock companies, no matter how created or organized, shall pay the normal tax upon income exceeding $3,000, but shall not be liable to pay the supertax; and the minister may permit any corporation subject to the normal tax, the fiscal year of which is not the calendar year, to make a return and to have the tax payable by it computed upon the basis of its income for the 12 months ending with its last fiscal year preceding the date of assessment.

(3) Any persons carrying on business in partnership shall be liable for the income tax only in their individual capacity.

(4) A person who, after the first day of August, 1917, has reduced his income by the transfer or assignment of any real or personal, movable or immovable property, to such person's wife, or husband, as the case may be, or to any member of the family of such person, shall, nevertheless, be liable to be taxed as if such transfer or assignment had not been made, unless the minister is satisfied that such transfer or assignment was not made for the purpose of evading the taxes imposed under this act or any part thereof.

(5) Taxpayers shall be entitled to the following deductions from the amounts that would otherwise be payable by them for income tax:

(a) from the income tax accruing for the year 1917 the amounts paid by any taxpayer for taxes accruing during the year 1917 under the provisions of part 1 of the special war revenue act, 1915, and from the income tax payable for any year thereafter the amounts paid by the taxpayer for taxes accruing during such year under the said part 1 of the said act; and

(b) from the income tax accruing for the year 1917 the amounts paid by any taxpayer under the business profits war tax act, 1916, and any amendments thereto for any accounting period ending in the year 1917. In the case of a partnership each partner shall be entitled to deduct such portion of the tax paid by the partnership under the business profits war tax act, 1916, as may correspond to his interest in the income of the partnership.

Regulations Under Act.

In the act, and in any regulations made under the same, unless the context otherwise requires:—

(a) "board" means a board of referees appointed under section 12;

(b) "minister" means the minister of finance;

(c) "normal tax" means the tax authorized by paragraph (a) of section 4 of this act;

(d) "person" means any individual or person and any syndicate, trust, association or other body and any body corporate, and the heirs, executors, administrators, curators and assigns or other legal representatives of such person, according to the law of that part of Canada to which the context extends;

(e) "supertax" means the taxes authorized by paragraphs (b) to (g), both inclusive, of section 4 of this act;

(f) "taxpayer" means any person paying, liable to pay, or believed by the minister to be liable to pay, any tax imposed by this act;

(g) "year" means the calendar year.

Definition of Income.

Income, according to this act, means the annual profit or gain or gratuity, whether ascertained and capable of computation as being wages, salary, or other fixed amount, or unascertained as being fees or emoluments, or as being profits from a trade or commercial or financial or other business or calling, directly or indirectly received by a person from any office or employment, or from any profession or calling, or from any trade, manufacture or business, as the case may be; and shall include the interest, dividends or profits directly or indirectly received from money at interest upon any security or without security, or from stocks, or from any other investment, and, whether such gains or profits are divided or distributed or not, and also the annual profit or gain from any other source; with the following exemptions and deductions:

(a) the value of property acquired by gift, bequest, devise or descent;

(b) the proceeds of life insurance policies paid upon the death of the person insured, or payments made or credited to the insured on life insurance endowment or annuity contracts upon the maturity of the term mentioned in the contract or upon the surrender of the contract;

(c) such reasonable allowance as may be allowed by the minister for depreciation, or for any expenditure of a capital nature for renewals, or for the development of a business, and the minister, when determining the income derived from mining and from oil and gas wells, shall make an allowance for the exhaustion of the mines and wells;

(d) the amount of income the tax upon which has been paid or withheld for payment at the source of the income under the provisions of this act;

(e) amounts paid by the taxpayer during the year to the Patriotic and Canadian Red Cross funds, and other patriotic and war funds approved by the minister;

(f) for the purposes of the normal tax the income embraced in a personal return shall be credited with the amount received as dividends upon the stock or from the net earnings of any company or other person which is taxable upon its income under this act.

Outside of Canada.

(2) Where an incorporated company conducts its business, whether under agreement or otherwise, in such manner as either directly or indirectly to benefit its shareholders or any of them, or any persons directly or indirectly interested in such company, by selling its product or the goods and commodities in which it deals at less than the fair price which might be obtained therefor, the minister may, for the purposes of this act, determine the amount which shall be deemed to be the income of such company for the year, and in determining such amount the minister shall have regard to the fair price which, but for any agreement, arrangement or understanding, might be or could have been obtained for such product, goods and commodities.

(3) In the case of the income of persons residing or having their head office or principal place of business outside of Canada but carrying on business in Canada, either directly or through or in the name of any other person, the income shall be the net profit or gain arising from the business of such person in Canada.

(4) For the purpose of the supertax only, the income of a taxpayer shall include the share to which he would be entitled of the undivided or undistributed gains and profits made by any syndicate, trust, association, corporation or other body, or any partnership, if such gains and profits were divided or distributed, unless the minister is of opinion that the accumulation of such undivided and undistributed gains and profits is not made for the purpose of evading the tax, and is not in excess of what is reasonably required for the purposes of the business.

The following table shows how the tax, which will become operative next month, will affect incomes:—

Income of	(Unmarried men and widowers without dependent children) Exempt $1,500.	All other persons Exempt $3,000.
$ 4,000	$ 100	$ 40
5,000	140	80
7,000	240	180
10,000	420	360
12,000	600	540
15,000	870	810
20,000	1,320	1,260
30,000	2,520	2,460
50,000	5,320	5,260
75,000	10,020	10,010
100,000	14,820	14,760
150,000	29,320	29,260
200,000	43,820	43,760

The Canadian Senate on September 4th passed amendments, on second reading, to the Income Tax Act, 1917, approved by the House of Commons on August 17th. The section defining the income that is subject to taxation was amended so that taxable income is declared to be the "annual net profit" instead of the "annual profit" as in the original bill.

Other amendments were made to the same clause to make it clear that while bequests and proceeds of life insurance policies were not to be regarded as income, the earnings of the bequests and the policies were income and subject to taxation.

Another amendment declared that in computing income the person taxed shall not be allowed to deduct the amount of personal or living expenses.

FALSE STATEMENTS WILL BE COSTLY

Regulations Under Income Tax Law—List of Exemptions

Under the income tax measure any person making a false statement in any return required by the minister of finance shall be liable on conviction to a fine not exceeding $10,000 or six months' imprisonment, or both. For each default in complying with provisions of the act governing returns the person shall be liable to a penalty of $100 a day during the period of default.

Boards of referees, consisting of not more than three members, are to be appointed by the Governor-General-in-Council and shall act as courts of revision and hear appeals. The board will have power to confirm or amend an assessment. If an appeal is unsuccessful, the board may direct that the appellant shall pay the costs or part of the costs, but, if the appeal is successful, it may recommend that all or part of the costs be paid by the Crown. The exchequer court fees will apply in connection with the administration of the act. If a taxpayer is dissatisfied with the decision of a board of referees, he may within twenty days appeal to the finance minister. Such appeals will come under the exclusive jurisdiction of the exchequer court.

Employers to Make Returns.

The bill provides that "Every person liable to taxation under this act, shall, on or before February 28th in each year, without any notice or demand, deliver to the minister a return, in such a form as the minister may prescribe, of his total income during the last preceding calendar year. In such return the taxpayer shall state an address in Canada to which all notices and other documents to be mailed or served under this act may be mailed or sent."

The bill also provides that all employers shall make a return of all persons in their employ, liable to taxation under the act and all corporations, associations and syndicates shall make a return of all dividends or bonuses paid to shareholders or members and these returns must be forwarded to the minister of finance on or before February 28th in each year.

Returns in the case of corporations, associations or other bodies shall be made and signed by the president, secretary or chief agent having a personal knowledge of the business.

The act makes it compulsory on the part of employers to deduct from salaries of employees subject to the income tax, the amount of the tax and to forward it to the finance department.

Incomes Which are Exempt.

The following incomes are exempt from the operation of the tax: The income of the Governor-General and of consuls and consuls-general who are citizens of the countries they represent and not engaged in any other business or profession; the income of any company, commission or association of which not less than ninety per cent. of the stock is owned by a province or municipality; the income of any religious, charitable, agricultural and educational institution, boards of trade, chambers of commerce, labor organizations and benevolent and fraternal societies; the incomes of mutual corporations, not having a capital represented by shares and no part of the income of which inures to the profit of any member thereof and of life insurance companies, except such amount as is credited to the shareholders' account; the incomes of clubs, societies and associations organized and operated solely for social welfare, civic improvement, pleasure, recreation or other non-profitable purposes, no part of the income of which inures to the profit of any stockholder or member; the incomes of such insurance, mortgage and loan associations operated entirely for the benefit of farmers as are approved by the minister; the incomes derived from any bonds or other securities of the Dominion of Canada, issued exempt from any income tax; the military and naval pay of persons who have been on active service overseas during the present war in any of the naval or military forces of His Majesty or any of His Majesty's allies.

Deductions From Tax.

From incomes the following will be deducted for the purpose of the tax: The value of property acquired by gift, bequest, device or descent; proceeds of life insurance policies paid upon the death of the person insured; such reasonable allowance as may be allowed by the minister when determining the income derived from mining and from oil and gas wells as shall make an allowance for the exhaustion of the mines or wells; the amount subscribed and paid by a taxpayer during the year to the Patriotic and Canadian Red Cross funds and other patriotic and war funds approved by the minister; for the purposes of the normal tax the income embraced in a personal return shall be credited with the amount received as dividends upon the stock or the net earnings of any company or other person which is taxable upon its income under the bill.

BUSINESS PROFITS TAX

Its Operation Will Cease This Year, Unless New Legislation is Passed

The business profits war tax act which came into force in 1916 will operate until 1918. Under its provisions, incorporated companies were taxed 25 per cent. on net profits exceeding 7 per cent. upon capital employed (throughout the accounting period) of $50,000, or over. The profits of a business owned other than by an incorporated company, were taxed 25 per cent. on net profits exceeding 10 per cent.

The taxation applies also to businesses with capital less than $50,000 and making munitions to the extent of 20 per cent. of their output.

The amendment to the act, introduced by Sir Thomas White in the House at Ottawa in April, changed the fixed tax to a progressive one. A company's profits up to 7 per cent. are exempt. On profits from 8 per cent. to 15 per cent. inclusive, 7 per cent. is exempt, the balance being taxed 25 per cent. On profits exceeding 15 per cent. to 20 per cent. inclusive, 7 per cent. is exempt, 8 per cent. will be taxed 25 per cent. and the balance (not exceeding 5 per cent.) will be taxed 50 per cent. On profits exceeding 20 per cent., 7 per cent. is exempt, 8 per cent. will be taxed 25 per cent., 5 per cent. will be taxed 50 per cent., and the remainder will be taxed 75 per cent. How this progressive tax works on the profits of a company with capital of $100,000, for example, is shown in the accompanying table. The table also shows how the new income tax works.

Capital employed includes (a) amount of capital stock of a company paid up in cash (or a fair valuation of such stock if issued against any other consideration than cash); (b) actual unimpaired reserves, or accumulated profits. An incorporated company's capital (plus unimpaired reserve, rest or previously accumulated profits if used as capital) existing at the beginning of the accounting period is the basis for the allowance of the 7 per cent. exemption.

Accounting Periods.

The amended act provides that the increases in the tax "shall be levied against and paid by the person owning such business for each and every accounting period ending after December 31st, 1916." The tax, therefore, will cover most of the year 1916 for a large number of companies, but those whose fiscal years conform to the calendar year, will not pay the additional taxation during the latter part of 1916. The tax apparently is computed for the full year for each company from the beginning of the accounting period. Where the company's year ends January 31st, 1917, the tax commences from February 1st, 1916.

In the original act, the tax was retroactive and to be levied for three years upon the next profits shown to any accounting period (fiscal year) after December 31st, 1914. Dividends re-

ceived from the stock of any incorporated company taxed under the act, were not included in the profits taxed. Reasonable deductions from gross profits for depreciation, renewals, etc., were allowed.

The periods during which the tax was payable under the old act were as follow:—Any company, firm or individual which was liable on July 1st, 1916, to a tax on two or more accounting periods covering two years, the tax covering the first twelve months could be paid on November 1st, 1916, the tax covering the second twelve months on November 1st, 1917; and the third and last year's tax on November 1st, 1918. Interest at 7 per cent. is chargeable on taxes in arrears.

Under both the original and the amended act companies with a lesser capital than $50,000, 20 per cent. or more of whose business is, or has been in manufacturing or dealing in munitions or war supplies, are subject to the tax.

The amended act applies to all incorporated companies or private firms to which the original act applied.

Provisions of Original Act.

The main provisions of the original act may be briefly summarized as follows:—In determining the profits of mining companies an allowance will be made by the finance minister for exhaustion of the mines.

A company cannot evade the tax by selling its goods or products to its shareholders or others at less than a fair price, and the finance minister has full power to demand additional information (on oath if necessary) and to re-value the assets in any statement submitted to him.

The minister of finance requires, in duplicate, a return on or before July 1st each year, and neglect to make such return renders the delinquent liable to a penalty of $200 for each day of default. The penalty for false statement in any return is $10,000, or six months imprisonment, or both.

On or before September 1st each year, the finance minister forwards notice of assessment of taxable profits to each company, firm and individual, and the tax is payable on or before November 1st following.

Deductions from gross profits for remuneration of directors, managers, etc., were not, without consent of the minister of finance, to exceed the sums deducted for those purposes in the accounting period ended before January 1st, 1915, and no deductions of any nature will be permitted which improperly reduce the taxable profits of the business. The spirit of this provision still applies.

Appeals against the minister's assessment of taxes may be made in form prescribed by the act, to a board of referees appointed by the finance minister, within twenty days after date of mailing of notice of assessment, and if the taxpayer is dissatisfied with the decision of the board, he may within twenty days after mailing of the decision give the finance minister written notice, in form prescribed by the act, of his intention to appeal the decision. The matter will then be referred to the Exchequer Court of Canada, whose decision is final.

The accompanying table shows what a corporation, with $100,000 capital, will pay under the business profits tax and under the income tax.

CANADIAN RAILROAD MATURITIES THIS YEAR

The following table shows the dates upon which Canadian railway notes fall due this year:—

January 10th.—Canadian Northern secured notes, 6 per cent.	$ 1,250,000
January 10th.—Grand Trunk 3-year secured notes, 5½ per cent.	5,000,000
July 10th.—Canadian Northern secured notes, 6 per cent.	3,000,000
July 10th.—Canadian Northern 1-year notes, 6 per cent.	2,700,000
August 1st.—Grand Trunk 2-year notes, 5 per cent.	2,000,000
August 12th.—Canadian Northern second sterling notes, 5 per cent.	9,733,333
September 1st.—Canadian Northern common notes, 6 per cent.	10,000,000
September 1st.—Canadian Northern 1-year terminal notes, 6 per cent.	1,750,000
October 1st.—Grand Trunk 5-year notes, 5 per cent.	10,000,000
Total	$45,433,333

MUNICIPAL FINANCE IN SASKATCHEWAN

Rural Telephone Companies' Borrowings Last Year Were Substantial

By S. P. GROSCH.

Reports from rural municipalities throughout Saskatchewan indicated that even during October and November large amounts of taxes had been received, notwithstanding the fact that such taxes are not subject to penalties till the end of the year. According to the 1916 annual financial statements of these rural municipalities, there was an average cash balance of approximately $7,500. The indications for the present year are for an equally good, if not better, showing. Lands which had been sold for taxes two years ago under the provisions of the arrears of taxes act, have nearly all been redeemed. The excellent financial condition of the rural municipalities and rural districts generally, may be taken as a reason for the increased borrowings for the construction of rural telephone lines, which borrowings are shown in a comparative statement of the amounts authorized by the Saskatchewan local government board during the first 11 months of the years 1914, 1915, 1916 and 1917. The period of 11 months is adopted as figures for the month of December, 1917, were not available at the time of writing:—

	1914, first 11 m'ths.	1915, first 11 m'ths	1916, first 11 m'ths.	1917, first 11 m'ths.
Cities	$4,299,467	$ 739,012	$ 150,376	$ 87,082
Towns	600,483	307,772	102,500	87,061
Villages	116,300	94,850	63,150	83,200
Rural municipalities	154,500	62,000	11,000	63,000
Schools	1,051,100	613,675	520,560	527,445
Rural telephone companies	949,100	1,133,450	1,902,125	3,190,725
Totals	$7,170,950	$2,950,759	$2,749,711	$4,038,513

Rural Municipal Borrowings.

If authorizations to rural telephone companies are deducted (as they are not municipals), the comparison is as follows:—

First 11 months.	Amount.
1914	$6,221,850.00
1915	1,817,309.00
1916	847,586.00
1917	847,787.82

An examination of this statement will show that while during 1914, urban municipalities borrowed much more heavily than did the rural municipalities; during 1917, the comparative borrowings were reversed. The increased borrowings of rural municipalities is due in part to their undertakings in respect to the erection and equipment of union hospitals. Continued expenditure for this purpose may be expected.

The officials of urban municipalities are realizing that the speculative value in lands has disappeared and the assessment on lands within the areas of such municipal centres has been lowered accordingly. An examination of the above statement will also show that thrift and economy are being practised and that new expenditures are being incurred only where absolutely necessary.

Rural Telephone Bonds.

Owing to the high cost and scarcity of materials and labor, and the fact that long distance telephone lines will not be materially extended during the coming season, there will be a large decrease in borrowings by rural telephone companies during 1918, the probability being that such construction as may take place will be largely through extensions of present systems and new lines from centres which at present have long distance service.

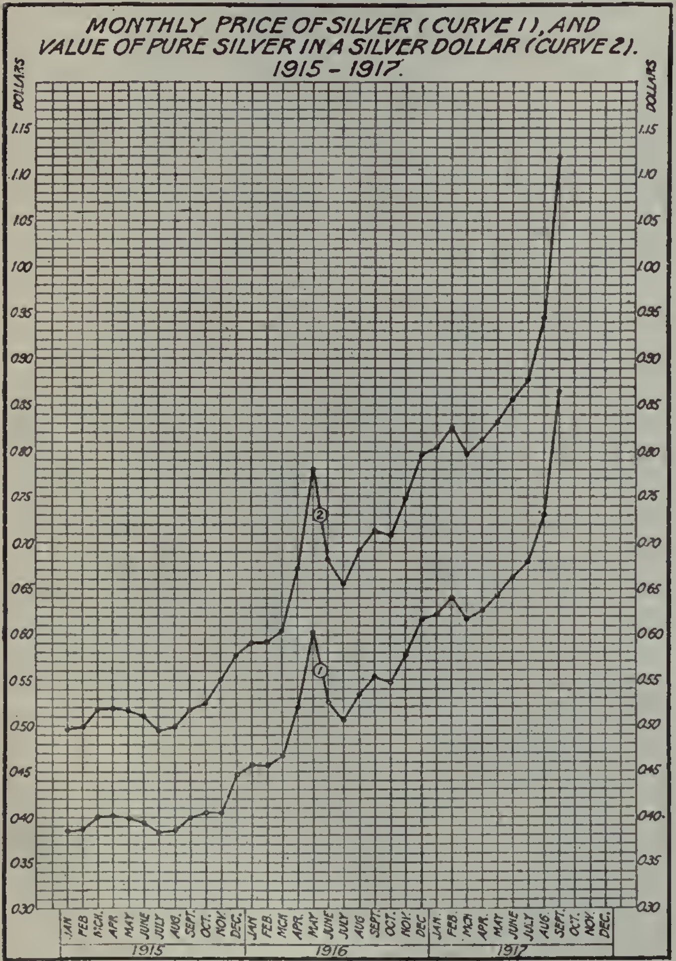
Remarkable as was the success of the Victory Loan campaign with respect to the amount of money raised, its educational features have not been sufficiently recognized. All classes of people are now bondholders. This being the case, every precaution should be taken to protect the small investor against undue losses in case he should be compelled to sell his Victory bonds, otherwise the benefits of the campaign in this respect may be nullified.

The local government board has been encouraging municipalities to place their debentures locally, and the features of the Victory Loan campaign above referred to, should assist in further extending this policy, particularly at a time when general financing must be done to a large extent internally. Every assistance in the issuing of debentures in such form and denominations as to make them attractive to local purchasers has been rendered by the board, with the result that in many instances much better prices have been secured than would have been obtained if the debentures had been placed upon the present unreceptive market.

SILVER AT DOLLAR AN OUNCE

Last Year's Rapid Rise in Price Benefited Canada—How Prices Varied During Past Years

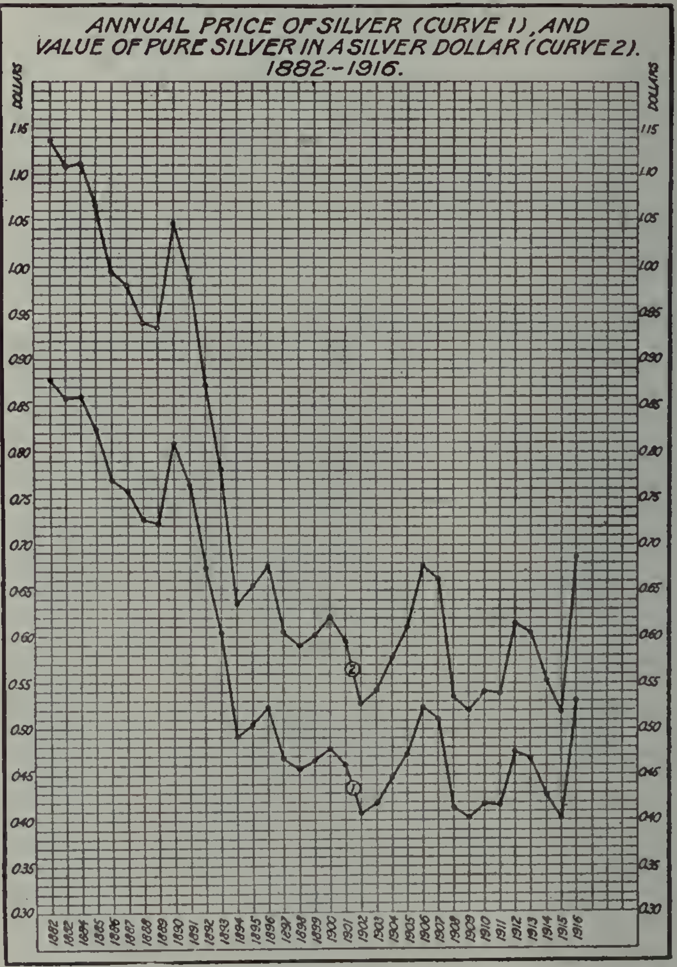
The increase in the price of silver last year was a matter of keen interest to Canada, which is the world's third largest producer of that metal. Last year the Dominion produced approximately 30,000,000 ounces of silver, an output which at the high prices was a considerable source of wealth.



MONTHLY PRICE OF SILVER (CURVE 1), AND VALUE OF PURE SILVER IN A SILVER DOLLAR (CURVE 2). 1915 - 1917.

The advances last fall carried the price of silver to the highest level in more than two decades, the official quotation for commercial silver in New York on September 21st being $1.08 an ounce and in London 55d. Sales for delivery at Vancouver were reported at $1.02 when the official New York price was 95⅝ cents. On September 28th, the Mining Corporation of Canada sold 200,000 ounces of silver on a basis to net the company in Toronto $1.16 7/16. The official price for bar silver on the same day in New York was $1.08½, an advance of .08 cents during the week, of 17⅞ cents since September 1st, and of 33⅛ cents since January 1st, 1917. Silver was then nearly 60 per cent. higher than it was a year previously. On the same date, the London price stood at the highest since March, 1878. The upward movement persisted steadily since the middle of January, 1917. The following table compares last year's highest quotations at New York and London with levels ruling during the war period:—

	New York.	London.
September 1st, 1915	46⅜c.	23 3-16d.
September 1st, 1916	67¼c.	32d.
January 1st, 1917	75⅜c.	36½d.
December 21, 1917	86⅝c.	43⅜d.



ANNUAL PRICE OF SILVER (CURVE 1), AND VALUE OF PURE SILVER IN A SILVER DOLLAR (CURVE 2). 1882-1916.

History of Silver.

For centuries silver and gold had equal purchasing power. In Arabia at one time, silver was assigned a greater value than gold. This has not been the case in any of the European countries. From 1257 to 1664 the value of gold coins in England was regulated by proclamation. From 1664 to 1717 its value was not fixed and subject to constant fluctuations. At the beginning of the eighteenth century English merchants started to pay a small premium (between two and three per cent.) on gold, giving it preference, owing to the large amount of spurious silver coins which commenced to appear in the market. For a long period previous to 1797 the Bank of England found it cheaper to purchase gold in the open market at a fixed ratio to discharge its obligations. While in practically all European countries this ratio varied between 9 and 15 to 1, Japan, around the end of the eighteenth century, still maintained a ratio of 5 to 1, quickly correcting it when European financiers commenced to exchange European silver for Japanese gold. The first act restricting the free use of silver as legal tender was passed in England under Lord Liverpool in 1816. Germany continued to favor silver, and English financiers were not slow in discovering a profit in shipping silver to Germany and bringing back its gold. Whether it was the profit in the business, or whether British foresight played a part in it, suffice it to say that Great Britain's gold supply increased as Germany's silver supply became larger. When after the war of 1870 Germany tried to unload some of its silver in the London market, the price per ounce dropped from $1.20 to 80 cents. The discovery of silver mines in Mexico brought the price of silver down to 45 cents per ounce, the lowest on record. In recent years its value has been around 60 cents per ounce, but what has always happened when war has broken out is taking place during the present European conflict, a part of the population

Sept. 15	51	49	100½	96⅝
Sept. 22	55	51	108½	100½
Sept. 29	55	49½	108½	97⅝
Oct. 6	49	46¼	96⅝	91⅛
Oct. 13	46	45⅛	90⅝	88⅞
Oct. 27	42¼	41⅞	83½	82½
Nov. 3	46	42¼	90⅝	83¼
Nov. 10	44⅞	43¾	88⅜	86⅛
Nov. 16	43¾	43½	86⅛	85¾
Nov. 23	43⅜	42 15-16	85½	84⅝
Nov. 30	42¾	42 5-16	84¼	84¼
Dec. 7	43	42¾	85⅞	84¼
Dec. 14	43⅛	42⅞	86⅛	85⅝
Dec. 21	43⅜	43	86⅝	85⅞

The following table gives the high and low quotations of silver, expressed in pence, at London, being the silver market of the world, covering a period of years, and showing that the last year's prices were the highest since 1891:—

	High.	Low.
1917	48½	36
1916	37⅛	26 11-16
1915	27¼	22½
1914	27¾	22⅛
1913	29⅜	26 1-16
1912	29 11-16	25⅛
1911	26⅛	23 11-16
1910	26¼	23 3-16
1909	24⅞	23 9-16
1908	27	22
1907	32 7-16	24 9-16
1906	33⅛	29
1905	30 3-16	25 7-16
1904	28 9-16	24 7-16
1903	28½	24 11-16
1902	26 3-16	21 15-16
1901	29 9-16	24 15-16
1900	30 3-16	27
1895	31⅜	27⅛
1894	31¾	27¼
1893	38¾	30½
1892	43¾	37⅞
1891	48¾	43½
1890	54⅝	43⅝
1889	44⅜	41⅞
1888	44⅝	41⅝
1887	47⅛	43¼
1886	47	42
1885	50	46⅞
1884	51⅜	49½
1883	51	50
1882	52½	50
1881	52⅞	50⅞
1880	52⅞	51⅝
1879	53¾	48⅞
1878	55¼	49½

Nearly Gold's Worth.

To make the metal in an American silver dollar intrinsically worth as much as the gold in the gold dollar, silver would have to sell on the market at $1.29¼ per ounce. It has not sold as high as that since the middle of 1873; before that, it had long sold at or above the coinage parity. In 1890, when Congress passed the Silver Purchase Bill, the price, which had averaged 93½ cents the year before, rose to $1.21. But it got no higher; it was down to 98 cents in another month or two. In December, 1902, when the London price reached 21 3-16 pence per ounce—the lowest ever recorded, before or since—the New York price was down to nearly 50 cents.

Here is an explanation of the method of arriving at the intrinsic value of the dollar: "A standard silver dollar contains 371¼ grains pure silver and 41¼ copper alloy, making up the total weight of 412½ grains. A Troy ounce contains 480 grains. By multiplying the price of silver on any day by 371¼ and dividing by 480 the result would be the bullion value of a silver dollar."

Of the 12,000,000 dwellings in the United States, 96 per cent. are protected, at least to some extent, by fire insurance. But of the 100,000,000 inhabitants only 18 per cent. have taken out life insurance policies.

Revised figures showing the results of railway operations in 1916, published by the United States Interstate Commerce Commission in its annual report to Congress, place the average rate of return on the investment in railway property in the most prosperous year in their history at only 5.8 per cent.

The recent order-in-council, making is necessary to obtain a certificate prior to the issue of securities or stock, applies to all treasury stock, not yet issued. With regard to mining companies, the policy of the government will probably be to authorize the issue of stock and other securities as the importance of the mining industry is fully recognized. It is likely that the regulations may be made whereby certain classes of companies will be exempt from the necessity of obtaining the certificate called for by the order-in-council. The object of the measure is to regulate important issues of securities which might seriously affect the market and market rates and to prevent the absorption of capital into new industries of a non-essential character.

WE specialize in Mortgage Securities of Canadian corporations engaged in the manufacture of wood pulp and paper. We recommend these for conservative investment, believing them to offer exceptional security, in view of Canada's unfailing resources of raw material.

We are in a position to offer from our holdings—purchased after careful investigation and with full knowledge of governing conditions—a selection of such Mortgage Securities to yield from 6% to 7%, with safety of principal and regularity of interest payments assured.

Descriptive circulars and full information will be sent on request.

BRITISH COLUMBIA'S MUNICIPAL FINANCE

Further Reduction in Assessed Values of Properties—Improvement in Collection of Taxes

By R. BAIRD.

The past year has shown a continued application on the part of the municipalities of this province to the task of placing municipal finance on a sound basis. A continuance of the policy of close economy, a further reduction in the assessed values of property, and an improvement in the collection of taxes, notwithstanding that no effort is made to collect taxes on soldiers' property, are the features of the year's financial administration.

The assessed value of land in 1914 stood at $517,678,756.54. In 1917 the assessed value was $397,538,547.10. It was found in 1914 that the period then closing of activity in real estate had resulted in a serious inflation of assessed values and in the following year a very serious attempt was made by the legislature to devise the fairest means of bringing them back to a reasonable basis, and at the same time to give the municipalities a reasonable time to adjust themselves to the new conditions. It was recognized that the previous basis of actual value was temporarily, at least, impracticable for the reason that selling values had, for the time, disappeared, and values based on revenues were precarious.

Assessments Readjusted.

By an amendment to the municipal act, it was provided that there should be no appeal from the decision of the court of revision, in any case where the aggregate assessment of lands in a municipality was less by 10 per cent. than the assessment of the year next preceding and where the assessment of the land in question was also 10 per cent. less than its assessment in the year previous, provided that the assessed value of the land in question was fair in comparison with lands of the same class in the municipality, the basis of comparison to be the assessment roll of 1914. The object aimed at has been substantially gained. Assessments have been readjusted without embarrassment to the municipalities.

Such borrowings as have been made during the current year have been almost wholly for current purposes and to take care of liabilities incurred in previous years. New undertakings in 1917 involved borrowing in so far as reports are complete only to the amount $133,000, the expenditures being, for water and electric light $103,000, for sewers $14,000, for schools $10,000 and for parks $6,000.

To Protect Soldiers' Property.

The financial problem arising out of a large percentage of land owned in this province by soldiers and soldiers' families is still an unsettled one. The statutes now provide for the levy of the usual taxes on such property, but the enforcement of the collection is deferred. It is quite evident that such a provision furnishes no means of final settlement, but it is hoped that in the near future a solution will be found which will protect the soldiers' property and at the same time prevent embarrassment of the municipalities. The question is a serious one and still requires a great deal of careful consideration. Municipal councils cannot afford to ignore the fact that sooner or later they must assume a large burden still resting upon the men on military service, and the sooner preparations are made to take care of the burden, the lighter it will be.

Improvement of Conditions.

While conditions have materially improved during the past two years it would be misleading to say that a complete solution of all the financial problems arising out of the situation created in 1914 is at hand. Increased industrial activity and the passing of land into firmer hands have had a good effect and have relieved municipal burdens, but it appears evident that easy times will come again only after a continued period of the closest attention to economy in administration.

AUTOMOBILES IN CANADA

There is One Auto for Every Forty of Population—Nearly Seventy-six Thousand New Cars in 1917

By PERCY C. CHERRY.

One automobile for every forty individuals in the country is Canada's record. This might be said to represent one car for every eight families in the Dominion, and probably involves a capital expenditure of $200,000,000, or a per capita investment of $25. It may mean that during the year just ended the people of Canada have spent no less than between $30,000,000 and $40,000,000 on the automobile alone.

Accepting the following figures as the most authentic available, the increase of the cars operating in Canada during 1917 over those registered in 1916 shows that, in spite of war conditions and the doctrine of thrift preached far and wide, the automobile is constantly growing in popularity. The comparison of the two years is as follows:—

	1916.	1917.
Alberta	8,094	21,061
British Columbia	7,243	10,600
Manitoba	11,727	18,500
New Brunswick	2,866	5,160
Nova Scotia	4,510	5,054
Ontario	52,359	78,193
Prince Edward Island	....	291
Quebec	15,047	21,295
Saskatchewan	13,751	31,364
	115,597	191,518

New Cars, 76,000.

Without making any allowance for cars scrapped and replaced by new cars, there were nearly 76,000 new cars registered in Canada during 1917, more cars than were operating in the Dominion in 1914. The number of cars in the provinces of Alberta and Saskatchewan have more than doubled in one year. With the increase in Manitoba, it shows that the farmer is keeping well abreast of the times, and with his greater prosperity is demonstrating that he feels he can at least put a good deal of his money in circulation for luxuries and modern conveniences.

Ontario continues to keep well in the lead with more than the total of any other three provinces combined. Of the cities, Toronto maintains its lead of many thousands. A comparison of the numbers of cars in the larger cities is as follows:—

Calgary	2,663	Regina	1,411
Edmonton	1,048	Saskatoon	1,225
Hamilton	3,542	Toronto	18,342
London	1,858	Vancouver	4,639
Montreal	8,407	Victoria	2,007
Ottawa	1,864	Winnipeg	6,222

Commercial Cars.

No consideration has been given in the above figures to the commercial cars. These are included along with the pleasure cars and constitute the smaller portion of the cars registered in most provinces. In British Columbia there are 2,650 commercial cars and in Ontario 5,000. Close figures are not available for the other provinces.

There are many ways of profitably analysing the distribution of cars—by makes, by territory, by values. As no one has hitherto attempted to show the distribution in the rural communities and in the smaller places, so far as the writer is aware, the percentage proportion of cars in places, in each province, with a population of 5,000 and under, is as follows:—

Alberta	74%	Ontario	50%
British Columbia	34%	Prince Edward Island	53%
Manitoba	59%	Quebec	42%
New Brunswick	72%	Saskatchewan	86%
Nova Scotia	53%		

It was stated at Ottawa last week that the railways of Canada will not be taken over by the government as has been done in the United States.

The British government has prohibited the import of securities or the export of capital by any resident of the United Kingdom without Treasury permission in writing.

DOMINION GOVERNMENT LOANS LAST YEAR

Three Were Made Involving Total of $650,000,000—Anglo-Canadian Financing

Last year the Dominion government made three loans as follow:—

Sold in—	Month.	Amount.	Rate per cent.	Term, years.	Issue price.
Canada	March......	$150,000,000	5	20	96
New York ..	August......	100,000,000	5	2	98
Canada	November..	400,000,000	5½	5, 10, 20	Par

The final loan of the Dominion government during the past year was the $150,000,000 Victory war loan made in Canada in November. This was subscribed to the extent of $418,000,000, of which about $400,000,000 was allotted. Full details of the Dominion government loans last year appear in the bond sales tables on another page.

Last year's figures compare with two Dominion government loans in 1916 as follow:—

Sold in—	1916.	Amount.	Rate per cent.	Term, years.	Issue price.
New York	March....	$ 25,000,000	5	5	99.56
New York	March....	25,000,000	5	10	97.13
New York	March....	25,000,000	5	15	94.94
Canada	September	100,000,000	5	15	97.50
Total		$175,000,000			

Dominion loans since 1912 to date have been as follow:—

1912	$ 25,000,000
1913	34,066,666
1914	48,666,666
*1915	170,000,000
*1916	175,000,000
*1917	650,000,000

---

*Including domestic war loans.

For the period September, 1914, to March 31st, 1915, Canada arranged with the Imperial government for war loans of £12,000,000, the understanding being that Canadian war loans would be issued in Great Britain to repay borrowings from the British authorities, at times to be agreed upon by the British chancellor and the Canadian finance minister. This arrangement was duly extended, but since the summer of 1915 Canada has been able to finance its war expenditures in this country without the aid of further war loans from the United Kingdom. Great Britain is making us advances in regard to our expenditures overseas. We are establishing credits here for Great Britain. Up to September last, Canada advanced in cash and securities $100,000,000 more to Great Britain than Great Britain had advanced to Canada since the outbreak of war.

Only one public loan has been floated in London by the Dominion since the war. This was in March, 1915, for £5,000,000 4½ per cent. bonds, redeemable in 5 or 10 years, and issued at 99½. It was oversubscribed. The loan was for public works.

Benefit of Loans in United States.

Canadian government loans in the United States since the war are tabulated in an article headed, "Dominion Loan in United States Last Year." Among the reasons favoring Canadian government loans in New York are the following: (1) Relief to the amount of the loan will be given to the London market, which is the source of the imperial borrowings from which the war expenditure of the Empire is financed. (2) By borrowing in New York rather than in London the exchange situation now so greatly against the latter will be benefited. (3) A loan of a large amount effected in New York should tend to improve exchange conditions between Canada and the United States, exchange at present being strongly in favor of the latter.

Victory Loan Returns.

Of the approximate total of $400,000,000 allotted of Canada's Victory Loan, all was sold in Canada with the exception of about $10,000,000. The total subscriptions received were divided as follows, according to official returns (subject to further revision), to December 21st, 1917:—

	Population.	No. of subscribers.	Per capita.	Amount subscribed.	Subscription per capita.
Alberta	496,000	55,408	1 in 8.9	$ 16,515,150	$33.29
British Columbia	394,000	45,834	1 in 8.5	17,820,500	45.23
Manitoba	555,000	78,856	1 in 7.0	32,326,600	58.25
New Brunswick	350,000	20,000	1 in 17.5	10,250,000	29.29
Nova Scotia	508,000	39,521	1 in 12.8	18,588,150	36.59
Ontario	2,582,000	362,900	1 in 7.11	203,823,500	78.94
Quebec	2,263,000	125,867	1 in 17.97	93,798,100	41.45
Prince Edward Island	93,000	5,300	1 in 17.54	2,331,350	25.07
Saskatchewan	650,000	73,675	1 in 8.82	21,777,050	33.50
	7,891,000	807,361	1 in 9.77	$417,230,400	$52.87

RECORD OF CANADA'S FOUR WAR LOANS TO DATE

	First War Loan November, 1915	Second War Loan September, 1916	Third War Loan March, 1917	Fourth War Loan November, 1917
Amount of Loan....................	a) $50,000,000	$100,000,000	$150,000,000	(d) $150,000,000
Public subscriptions...........	$78,729,500	(b) $151,444,800	(c) $200,768,000	(e) $418,000,000
Banks' subscriptions	$25,000,000	$ 50,000,000	$ 60,000,000	....
Total over-subscription..................	$53,729,500	$101,444,800	$110,000,000	$268,000,000
Total over-subscription by public.........	$28,729,500	$ 51,444,800	$ 50,000,000	$268,000,000
Number of subscribers	24,862	34,526	40,800	802,000

(a) Ultimately increased to $100,000,000. (b) Includes $6,073,800 of the first loan converted. (c) Includes $18,131,000 of the first loan and $5,983,000 debenture stock converted. (d) Ultimately increased to approximately $400,000,000. (e) Approximately $400,000,000 was allotted.

For the first time the savings deposits in the banks of the Dominion passed $1,000,000,000 in November, 1917. The bank statement for that month, issued last week, shows the total savings deposits at $1,008,657,874. The deposits payable on demand also made a new high record, at $538,869,362. The prosperity and growth of the Dominion since the war is reflected in the increasing deposits since 1913, as shown by the following figures, giving the November savings deposits for each year since 1913: 1913, $625,803,150; 1914, $665,994,852; 1915, $714,219,286; 1916, $836,593,269; 1917, $1,008,657,874.

TO SHAREHOLDERS, DIRECTORS AND OWNERS:-

Some of the services which the broad experience of our staff of engineers and accountants enables us to render are:

VALUATIONS,

INVESTIGATIONS & REPORTS (Financial & Engineering):

REORGANIZATION,

MANAGEMENT - Industrials and Public Utilities.

ENGINEERING: (a) Construction - Design, Layout and supervision of erection, of Power Plants, Industrial Plants, Machinery and other manufacturing apparatus.

(b) Production - Application and the devising of business methods to reduce costs, increase production and sales, and give complete, accurate and current control necessary to the chief executives of every business.

ACCOUNTING - (a) Audits

(b) Constructive - Devising and Installing of Works and Commercial Accounting Systems to show currently and clearly all the detail costs of operation with a minimum amount of clerical work.

The results of services rendered by us in securing reduction of costs of operation and manufacture, as well as increased production and sales, are reflected in increased Net Profits.

Yours truly,

Gunn Richards Ltd.

How Our Four War Loans Compare

(Compiled for *The Monetary Times*)

	Loan of November, 1915.	Loan of September, 1916.	Loan of March, 1917.	Loan of November, 1917.
Amount of loan offered	$50,000,000 (later increased to $100,000,000)	$100,000,000	$150,000,000	$150,000,000. (Minister of Finance reserved right to allot any portion of amount subscribed in excess of $150,000,000)
Bonds maturing in	10 years	15 years	20 years	5, 10 and 20 years
Rate of interest	5%	5%	5%	5½%
Issue price	97½	97½	96	Par
Yield to investor	5.42%	5.30%	5.40%	5.81, 5.68 and 5.61%
Cost of $1,000 bond to investor, if paid for by instalments	$975	$975	$960	$1,000
Cost of $1,000 bond to investor who discounts instalments and makes all outstanding payments on given date	$962.70	$970.40	$957.35	$986.80
Discount-of-instalment privilege given	42 days from date of issue	34 days from date of issue	35 days from date of issue	51 days from date of issue
Instalments discounted at	4%	4%	4%	5½%
Instalments payable between	November 22nd, 1915, and May 1st, 1916	September 12th and December 15th, 1916	March 12th and June 15th	December 1st, 1917, and May 1st, 1918
Instalment payments spread over	159 days	94 days	96 days	152 days
First payment for bonds made	Upon application	Upon application	Upon application	18 days after lists opened
Interest payable, half-yearly, on	June 1st and December 1st	April 1st and October 1st	March 1st and Sept. 1st, 1917	June 1st and December 1st
Proceeds of loan to be used only for	War purposes	War purposes	War purposes	War purposes
Denominations of coupon bonds	$100, $500, $1,000	$100, $500, $1,000	$100, $500, $1,000	*$50, $100, $500, $1,000
Denominations of fully registered bonds	$1,000, $5,000, or authorized multiple of $5,000	$1,000, $5,000, or authorized multiple of $5,000	$1,000, $5,000, or authorized multiple of $5,000	*$1,000, $5,000, or authorized multiple of $5,000
Privilege of converting war bonds into bonds of future war issues	Privilege allowed. (Bonds of this issue accepted at 97½ plus accrued interest as equivalent of cash for purpose of subscription to new war loan issues)	Privilege not allowed at time of issue, but was granted by order-in-council, May, 1917, so far as concerned future loans with a maturity of 20 years or more	Privilege not allowed at time of issue, but was granted by order-in-council, May, 1917, so far as concerned future loans with a maturity of 20 years or more	Privilege allowed on future issues of like maturities or longer
Final allotment of bonds	$100,000,000	$100,000,000 (exclusive of amount paid for by surrender of first war loan bonds)	$150,000,000 (exclusive of amount paid for by surrender of first war loan bonds and debenture stock)	†Approximately $400,000,000 of the $418,000,000 subscribed.
Fee for conversion of fully registered bonds without coupons to bonds with coupons and vice versa		25 cents	25 cents	25 cents

*All bonds could be registered as to principal or as to principal and interest on this occasion.

†Final allotment figures were not available when this table was compiled.

BILLION DOLLARS OF BULLION

Canada Has Handled It Since Beginning of the War—Record of Shipments

Canada has handled $1,000,000,000 in bullion for the Imperial government and the Bank of England since the war broke out. The amount of gold in coin and bars handled by the Canadian finance department since August, 1914, is twice the total amount of gold that there was in England when the war commenced. This supply came to Canada from Great Britain, Japan, Russia, South Africa and other countries, via Halifax and Vancouver. The Ottawa Mint some time ago was enlarged to refine gold capacity of any gold refinery in the world, capable of treating 250,000 ounces, or $5,000,000 a week under the chlorine process. Much of the gold was treated at Ottawa and reshipped to New York. The largest gold refinery in the world is the one at Ottawa.

Establishment of Depository.

The gold depository at Ottawa of the Bank of England was not quite as busy last year as in 1916, owing to the entrance of the United States into the war. The establishment was fully occupied, however, This depository, it will be recalled, was established so that bankers on this side of the Atlantic could pay gold due to London through Ottawa and vice versa, thus avoiding the risk of gold shipments across the ocean in time of war. The authorities at Ottawa will not issue any figures regarding this arrangement without the consent of the Bank of England, but it is generally understood that the total deposited at Ottawa was originally $110,000,000. A number of transactions, of which no details have been given, have since occurred. The supply is being constantly replenished by arrivals from the South African mines and by shipments from London, via Halifax.

On August 12th, 1915, the first shipment of gold, since the beginning of the war, direct from Great Britain, was received, via Canada, in New York Further shipments were made from Great Britain, but on account of war precautions no publicity has been given to them in Canada.

About October, 1914, United States bankers supplemented the Ottawa arrangement by the formation of a $100,000,000 gold pool in New York. This gold pool was terminated in March, 1915.

The minister of finance tells *The Monetary Times* that the arrangement under which he is authorized to receive gold in trust for the Bank of England is as follows:—

The minimum of the transaction was established at $20,000; shipments to be made in kegs or boxes and a statement that the amount was to be held in trust for the Bank of England to accompany the shipment, which was to be addressed to the minister of finance and receiver-general of Canada, Ottawa; the minister to be advised also as to whom the proceeds were to be paid in London.

On the gold being received and checked, the Bank of England was advised by cable of the amount and to whom the proceeds were payable in London. The rate established by that institution for gold was 77/6d. per ounce for standard fine bars and 76/½d. per ounce for eagles. If sovereigns were accompanied by a guarantee from the person shipping same that they were of correct standard weight, namely, 122.5 grains for sovereigns and 61.125 for half-sovereigns, the bank would pay out a like amount in pounds in London, less three pence per ounce to cover freight and insurance.

The following table, compiled by *The Monetary Times*, shows the imports to and exports by Canada of coin and bullion month by month since the beginning of 1914 to 1916:—

Imports.

	1914.	1915.	1916.
January	$ 429,627	$ 638,174	$11,716,848

CANADA'S BOND SALES LAST YEAR

They Exceeded $726,000,000, of Which 75 Per Cent. Were Sold at Home

With its Victory Loan allotted to the extent of about $400,000,000, Canada last year sold more bonds than in any other one year of its history. The total sales in 1917 were $726,039,079, compared with $314,882,542 in 1916. How these bonds were marketed is shown in the following table:—

Sold in	Amount. 1916.	Amount. 1917.	% of total. 1916.	% of total. 1917.
Canada	$102,938,778	$546,330,714	32.80	75.26
United States ...	206,943,764	174,708,365	65.90	24.06
United Kingdom	5,000,000	5,000,000	1.30	0.68
	$314,882,542	$726,039,079		

Government Issues Large.

In 1916, the United States bought nearly 66 per cent. of our bond issues, Canadian investors taking practically all the remainder. This year, Canada purchased more than 75 per cent. of its bond issues, only 24 per cent. going to the United States. This is the highest percentage share of our bonds taken in any one year by our own people.

Including the war loans, the total bond sales last year were divided into the following classes:—

Bonds.	Amount. 1916.	Amount. 1917.	% of total. 1916.	% of total. 1917.
Government	$208,173,000	$665,300,000	66.50	91.6
Municipal	51,977,542	24,189,079	16.40	3.4
Railroad	22,240,000	17,700,000	7.00	2.4
Corporation	32,492,000	18,850,000	10.10	2.6
	$314,882,542	$726,039,079		

Mostly in Canada.

Because of war loans, the government issues last year accounted for over 91 per cent. of the bonds sold, as compared with 66 per cent. in the previous year. Last year, the Dominion government issues totalled $650,000,000 including the Victory Loan. Of that sum, $550,000,000 was taken in Canada, the remaining $100,000,000 being sold in the United States in July. That was the only foreign government loan which the United States government allowed to be issued there since the entry of the United States into the war. The remaining government issues of $15,300,000 were those of our provincial governments, Ontario accounting for $9 000,000 of the total. This substantial sum included an issue of $8,000,000 on behalf of the provincial Hydro-Electric Commission in regard to the acquisition by the commission of the Ontario Power Company. Of our total government bond sales last year, $138,000,000 went to the United States and $527,300,000, or over 79 per cent., were sold in Canada.

Municipal, railroad and corporation bond issues were considerably smaller than in 1916. Last year they accounted for approximately $60,000,000, or a little more than 8 per cent. of the total. In 1916 they accounted for $106,000,000, or 33 per cent. of the total.

The outlook for the coming year is for a continued monopoly of the money markets by war loans. This will be accentuated by the new regulations of December, 1917, by which all new issues will be subject to the approval of the finance minister.

CANADA'S MUNICIPAL BOND SALES

Total in 1917 Was Smallest in Recent Years, Being Less Than One-half That of 1916

Canada's municipal bond sales, according to the records of *The Monetary Times*, totalled in 1917 $24,189,079, as compared with $51,977,542 in 1916, $67,393,000 in 1915 and $79,133,994 in 1914. The sales during the past three years were divided as follows:—

In	1915.	1916.	1917.
Canada	$31,910,214	$19,640,778	$17,955,714
Great Britain	....	....	....
United States	35,483,114	32,336,764	6,233,365
	$67,393,000	$51,977,542	$24,189,079

In 1916, the municipal bonds sold were more than double those marketed last year. In 1915, the sales were almost three times as great as those of last year. The total of $24,189,079 for 1917 is the smallest for many years past. In previous years, Great Britain and the United States have usually taken more than half of our municipal bonds. In 1916, the United States took over 62 per cent., Canadian investors purchasing the balance. Last year Canadian investors took 70 per cent. of the issues, making a new high record, the United States purchasing the balance.

The Monetary Times' monthly record of sales of municipal bonds in the United States market during 1913 shows the total was $20,168,053 and for the past four years as follow:—

	1914.	1915.	1916.	1917.
January	....	$ 340,000	$ 3,183,215	$2,454,000
February	$ 50,000	6,471,000	899,500	485,725
March	18,000	6,543,947	595,000	120,440
April	25,000	7,100,825	2,158,306	1,563,200
May	1,750,000	600,000	7,219,000	......
June	2,100,000	......	3,393,243	80,000
July	1,130,000	890.000	3,631,200	1,530,000
August	35,000	750,000	97,300	......
September ...	90,000	6,748,342	200,000	......
October	....	1,589,000	....	......
November ...	170,200	4,000.000	7,894,000	......
December	6,935,000	450,000	3.065,000	......
	$12,303,200	$35,483,114	$32,335,764	$6,233,365

There were few sales of Canadian municipal bonds in any market during November and December last, owing to the Victory Loan campaign. The only exceptions were a substantial block of Quebec province municipals and a few Saskatchewan school district bonds. The Victory and Liberty Loans campaigns in Canada and the United States, the Dominion election last month, and the Christmas holidays, constituted a combination which practically removed the market for municipal bonds. The Quebec province municipals sold in November and December totalled $1,508,000, and, with a small block of school district bonds, made the only issues for those two months.

There are necessary expenditures awaiting a better money market. Such issues will probably receive the sanction of the finance minister under the order-in-council passed in December, 1917, making his consent necessary to all new stock and bond issues. *The Monetary Times'* bond record shows the sales in the Dominion during the twelve months of 1917, compared with the seven previous years. This is printed below:—

Canadian Municipal Bond Sales in Canada Only, by Months, 1910-1917.

	1910.	1911.	1912.	1913.	1914.	1915.	1916.	1917.
January	$ 881,838	$ 420,337	$ 2,133,531	$ 1,337,500	$ 1,953,137	$ 1,784,947	$ 1,909,441	$ 1,969,256

CANADA'S SPECIAL WAR MEASURES

Summary of Important Dominion Legislation Since War Commenced

When war broke out forty-two months ago, no time was lost by the Dominion government and the bankers of Canada in handling the financial situation. Undoubtedly, financial and business disaster in the Dominion was prevented by the rapid framing of special financial measures to cope with the crisis. Generally speaking, the emergency legislation has operated very smoothly, and in some cases no necessity has arisen for making use of the new laws. Here is a brief summary of our national war measures since the outbreak of war to date:—

1914.

(1) The Dominion government stood ready to issue Dominion notes to such an amount as was necessary against securities deposited by the banks and approved by the minister of finance.

(2) The government authorized the chartered banks of Canada to issue excess circulation to an amount not exceeding 15 per cent. of their combined unimpaired paid-up capital and rest or reserve fund from August until further official announcement.

No Gold Payments.

(3) The government authorized the chartered banks of Canada to make payments in bank notes instead of in gold or Dominion notes until further official announcement in that behalf.

(4) The redemption in gold of Dominion notes was suspended.

(5) Legislation was obtained to declare a moratorium if necessary. It has not been found necessary to declare a moratorium.

(6) The power of issue of Dominion notes was increased by providing that the finance minister should hold gold to the amount of 25 per cent. of the Dominion notes issued up to a total issue of $50,000,000, and in regard to Dominion notes issued in excess of that amount, gold to be held equal to such excess.

Heavy War Appropriations.

(7) A war appropriation of $50,000,000 was voted in August, 1914, for the fiscal year which ended on March 31st, 1915.

(8) Tariff legislation was passed on August 20th, 1914, involving new taxation to increase revenue, and affecting chiefly sugar, coffee, liquors and tobacco.

1915.

(9) Further taxation measures were announced on February 11th, 1915. These were special taxes on financial institutions, telegraph messages, passenger fares, and stamp taxes. Slight changes were made in the tariff.

(10) A further war appropriation of $100,000,000 was made.

(11) An amendment to the bank act was made in March permitting the banks temporarily to lend money for the purchase of seed grain upon the security of the grain purchase, the crop to be grown therefrom and the grain thrashed from the crop.

(12) Arrangement made in the fall for loan of £30,000,000 from British government for war purposes, to be drawn upon as necessary.

(13) First war loan, for $50,000,000, issued in November; $100,000,000 subscribed and allotted.

1916.

(14) A further war appropriation of $250,000,000 was authorized in February, 1916.

(15) Tariff on apples, oils and petroleum increased February, 1916.

(16) War tax on business profits instituted for a period of three years, to end December, 1917, taxes for which year will be paid during 1918.

(17) Measure for compulsory investment in Dominion securities by life insurance companies enacted. This expired December 31st, 1917.

(18) Sale of Dominion 5 per cent. 3-year debenture stock authorized, February, 1916; first sales, October, 1916.

(19) Second war loan, for $100,000,000, issued in September.

1917.

(20) War savings certificates of $25, $50 and $100 were first offered in January. Certificates of $10 denomination were issued in August. The prices of the four denominations were $8.60, $21.50, $43 and $86, repayable at face value in three years.

(21) A further appropriation of $500,000,000 was authorized in February for fiscal year ending March 31st, 1918.

Profits Tax Extended.

(22) Business profits war tax act, 1916, extended to take increased share of profits, viz., 50 per cent. of all profits in excess of 15 per cent., but not exceeding 20 per cent. per annum, and 75 per cent. of all profits in excess of 20 per cent. per annum upon capital. This new legislation applies to the last accounting period of the three years' term provided for by the original act.

(23) Third war loan, for $150,000,000, issued in March.

(24) Federal income tax measure became law, providing for a tax of 4 per cent. on incomes of married persons in excess of $3,000, and on incomes of unmarried persons in excess of $1,500, with provision for super-taxes in case of incomes exceeding $6,000. Residents of Canada and corporations operating in the Dominion are required to submit to the Dominion officials on or before February 28th, 1918, their declarations of 1917 income. The tax is payable on June 1st, 1918.

(25) Fourth war loan, for $150,000,000, issued in November.

CANADA'S VICTORY LOAN; LATEST FIGURES

The following returns to date in regard to Canada's Victory Loan have been furnished to *The Monetary Times* by Mr. W. S. Hodgens, chairman of the Dominion Business Committee of the Victory Loan campaign:—

	Population.	No. of subscribers.	Per capita.	Amount subscribed.	Subscription per capita.
Alberta	496,000	55,408	1 in 8.9	$ 16,515,150	$33.29
British Columbia	394,000	45,834	1 in 8.5	17,820,500	45.23
Manitoba	555,000	78,856	1 in 7.0	32,326,600	58.25
New Brunswick	350,000	20,000	1 in 17.5	10,250,000	29.29
Nova Scotia	508,000	39,521	1 in 12.8	18,588,150	36.59
Ontario	2,582,000	362,900	1 in 7.11	203,823,500	78.94
Quebec	2,263,000	125,867	1 in 17.97	93,798,100	41.45
Prince Edward Island	93,000	5,300	1 in 17.54	2,331,350	25.07
Saskatchewan	650,000	73,675	1 in 8.82	21,777,050	33.50
	7,891,000	807,361	1 in 9.77	$417,230,400	$52.87

How to obtain a safe and certain 5% for your savings in place of the usual 3%.

To increase the rate of interest earned by your savings is to increase the savings themselves in a very marked way. Thus, if you save $100 every six months for 10 years, at the end of that time you would have $2,618.33 if invested at 5 per cent., but only $2,347.05 if invested at 3 per cent.

That is, while the yearly amount saved is the same in both cases, the higher rate of interest has added over $271.00 to your capital.

This result can be safely and easily secured by investing in Standard Reliance Mortgage Corporation 5% debentures, which are issued in amounts from $100 to $10,000.

Interest at 5% is payable in cash at your local bank on the day it is due. Principal on the date agreed upon.

An interesting booklet about "PROFITS FROM SAVINGS," which gives some very valuable advice, will be sent free on request. Write for it to-day.

UNITED STATES' BAN ON GOLD EXPORTS

Its Effect on Exchange—Arrangements Were Made for $25,000,000

The export from the United States of coin, bullion and currency was forbidden by President Wilson in September, except with the consent of the Federal Reserve Board, subject to the approval of the United States treasury secretary. The executive order was dated September 1st, 1917, and contained these clauses:—

"1. Any individual, firm or corporation desiring to export from the United States or any of its territorial possessions to any foreign country named in the proclamation dated September 7th, 1917, any coin, bullion or currency shall first file an application in triplicate with the Federal Reserve Bank of the district in which such individual, firm or corporation is located, such application to state under oath and in detail the nature of the transaction, the amount involved, the parties directly and indirectly interested, and such other information as may be of assistance to the proper authorities in determining whether the exportation for which a license is desired will be compatible with the public interest.

Copy of Each Application.

"2. Each Federal Reserve Bank shall keep a record copy of each application filed with it under the provisions of this regulation, and shall forward the original application and a duplicate to the Federal Reserve Board at Washington, together with such information or suggestions as it may believe proper in the circumstances, and shall, in addition, make a formal recommendation as to whether or not in its opinion the exportation should be permitted.

"3. The Federal Reserve Board, subject to the approval of the secretary of the treasury, is hereby authorized and empowered upon receipt of such application and the recommendation of the Federal Reserve Bank to make such ruling as it may deem proper in the circumstances, and if, in its opinion, the exportation in question be compatible with the public interest, to permit said exportation to be made; otherwise to refuse it."

Wide Fluctuations in Exchange.

The wide fluctuations of the exchange market last year occasioned much inconvenience to merchants and manufacturers in both Canada and the United States. The business of importers and exporters naturally would be facilitated if as a result of mutual concessions the two governments permitted a moderate movement of gold either way when conditions warranted. Then it would be possible to make finer prices, as the necessity for allowing for possible heavy losses in exchange would not be present.

It was pointed out by experts that the United States, and New York particularly would derive substantial advantages from a policy of liberality in Washington in the matter of loans and gold shipments to the Dominion. Take the Canadian bank reserves in New York, for example. Ten years ago the aggregate of call loans and net bank balances carried in New York and London by the Dominion's chartered banks was $67,000,000; whereas the bank statement just published for September 30th, 1917, shows a total of $234,000,000, most of the amount being employed in New York.

As our banking system developed the external reserve was steadily built up in the belief that the balances were practically equivalent to gold. So a mild or liberal administration by Washington of its gold policy in regard to Canada, now that the metal is specially needed in the Dominion, would have a tendency to maintain the high character of our external reserves in the eyes of Canadian bankers; and with the further rapid development of our country's financial power it is quite probable that our balances and loans in New York will reach much larger figures in a few years

Canadian Bankers in Washington.

A party of prominent Canadian bankers visited Washington on October 30th, where they conferred with treasury department officials and members of the Federal Reserve Board relative to arranging for the raising of the embargo placed on gold shipments from the United States to Canada. Canadian funds had been accumulating in New York, largely as a result of the sale of Canadian grain bills at that centre. Ordinarily, the movement would be satisfied by gold exports from the United States, but the embargo put a stop to this. Following the conference in Washington there was a material recovery in the Canadian exchange situation, but even then New York funds were quoted in the neighborhood of $3 discount.

Exportation of $25,000,000.

The United States Federal Reserve Board finally agreed to sanction the exportation of $25,000,000 in gold to Canada on condition that it be returned when the exchange situation is re-established on favorable terms to Canada. This will probably occur early this year. At the beginning of 1917, New York funds in Montreal were selling at fully as high a premium quotation as the discount at the end of the year.

Gold in United States.

The net increase in the stock of gold in the United States through recorded net imports since August 1st, 1914, is seen in the following table:—

[000's omitted.]

	Imports.	Exports.	Excess of imports over exports.
Aug. 1st to Dec. 31st, 1914	$ 23,253	$104,972	*$ 81,719
Jan. 1st to Dec. 31st, 1915	451,955	31,426	420,529
Jan. 1st to Dec. 31st, 1916	685,745	155,793	529,952
Jan. 1st to Oct. 12th, 1917	545,080	353,646	191,434
Total	$1,706,033	$645,837	$1,060,196

PROSPEROUS MANITOBA

invites Settlers, Investors, Manufacturers and Miners

MANITOBA is the first and oldest of the provinces of the Great Canadian West, and yet the illimitable natural resources of the province are only beginning to be dimly realized. Even the horizon of her agricultural possibilities is widening as more intensive mixed farming and stock raising are bringing fresh proof that she is blessed with a combination of fertile soil, climate and other natural advantages such as no other of the provinces of Confederation can boast.

Manitoba still has millions of acres of unoccupied land, and, on the basis of production, it is the cheapest land on the North American Continent to-day.

AGRICULTURE

Field crops of Manitoba in 1917 brought Manitoba farmers over $181,000,000.

Live stock on Manitoba farms in 1917 was worth over $126,000,000.

Mixed farming is increasing by leaps and bounds and is bringing certain and sure returns ***every year.*** Dairy products alone amounted to over $5,000,000 this year, and Manitoba, which a few years ago was importing butter in large quantities, shipped out over ninety carloads of creamery butter alone. No finer butter is made in Canada.

MANUFACTURING

Manufactures in the City of Winnipeg alone in the year 1916 amounted to $52,000,000, and yet Manitoba is importing tens of millions of dollars' worth of manufactures that might be produced at big profits here. Materials are available, power is plentiful and cheap, sites are plentiful and low-priced. There are many openings which invite the careful investigation of the manufacturer and investor.

MINING

Manitoba has not in the past figured as a mining province, but to-day Manitoba bids fair to become the greatest mining province of Canada. The discoveries of copper and gold in northern Manitoba, close to the line of the new Hudson Bay Railway, are not simply promising; they are proved. The biggest mining interests in the United States are there already and are investing millions, with sure and certain returns in sight. As yet only the edge of the great mineral belt has been prospected. Keep your eye on northern Manitoba. It is just opening up. It is rich not only in minerals, but in timber, fish and furs, and it has unlimited waterpower.

MANITOBA CHAMPIONSHIPS

For the first time in a great many years Manitoba farmers entered into competition with the other provinces and the states at the annual International Dry-Farm Products Exposition, held this year at Peoria, Illinois, in September. Competition was open to the world. Manitoba won more championships and other prizes than any single province or state in the history of the competition. Look at this partial list:

First, second and third prize for hard red spring wheat
First prize for white oats
First and second for flax
First for mangels
First for dry farm barley
First for table beets
First for cauliflower
Sweepstakes for hard spring wheat
First and third and sweepstakes for rye
Second for potatoes (all America competed)
First for sugar beets
First for garlic

The above winnings, in competition with the provinces and states, furnish incontrovertible evidence of the premier advantages of Manitoba in agricultural production.

Further information, pamphlets, booklets, maps, etc., will be supplied on application to

Manufacturers and Wholesalers

REGINA is noted as an industrial and distributing centre, has a model industrial section, so planned and laid out as to incorporate all possible advantages for your business.

This district is served by spur tracks from the three trans-continental railways; has pavements, sewers, water, electric light and power, street railway services, etc. Sites in this district can be purchased at low prices by *bona fide* firms. The city owns in this district warehouse property valued at two million dollars. The Municipal Power Plant supplies power for manufacturing at exceptionally low rates. Over two score of new business enterprises have been established in this district since the war started, among which are three of the largest concerns in Canada, who have invested here several millions. Applications invited and detailed information furnished promptly.

CITY COMMISSIONER, Regina, Saskatchewan.

CANADA'S YEARLY FIRE WASTE

According to the record of *The Monetary Times* the fire losses in Canada during 1917 amounted to $20,086,085, as compared with $20,487,509 in 1916.

The following are comparisons of other features of the fire waste:—

	1914.	1915.	1916.	1917.
Average monthly loss	$2,026,751	$1,139,210	$1,707,292	$1,673.840
Loss per capita	$3.15	$1.78	$2.56	$2.60
Fires with damage of $10.000 or over	302	237	216	238

Here are the $10,000 and over fires, month by month, compared with the five previous years:—

Month.	1912.	1913.	1914.	1915.	1916.	1917.
January	51	22	41	35	28	28
February	19	26	45	25	30	31
March	30	19	28	24	30	26
April	20	23	31	22	13	13
May	34	35	29	23	23	11
June	27	39	23	18	9	17
July	23	40	29	11	13	16
August	19	45	16	10	14	14
September	16	33	13	20	12	10
October	24	27	18	17	14	15
November	18	28	11	13	14	26
December	37	21	18	19	18	31
Totals	318	358	302	237	218	238

The following table compiled by *The Monetary Times* shows the number of deaths caused by fire during the last eight years:—

	1910.	1911.	1912.	1913.	1914.	1915.	1916.	1917.
January	27	27	27	14	26	3	10	21
February	15	12	11	21	18	11	23	19
March	20	18	24	22	27	23	23	20
April	37	20	15	11	22	14	6	15
May	15	28	18	33	8	5	14	12
June	52	13	6	18	12	2	6	9
July	15	110	9	9	8	13	268	19
August	11	22	16	29	3	14	30	12
September	10	13	6	27	9	27	6	21
October	16	17	21	15	9	7	39	23
November	19	20	22	24	14	12	12	21
December	19	17	28	13	19	11	94	15
Totals	256	317	203	236	175	141	532	207

The December total fire loss in 1917 was the heaviest on record in recent years. The high total was due chiefly to the Halifax disaster, and to an exceptionally large number of fires with losses considerably exceeding $10,000.

A committee of 3 adjusters was appointed to apportion the Halifax losses. These adjusters were appointed by various companies interested, and there is no obligation on any company to employ them. Every company may appoint its own adjuster.

The fire loss figures of the Commission of Conservation are a little higher than those of *The Monetary Times*. According to the Commission's records, fire losses in Canada during 1917 totalled $23,251,604, and the number of fires reported totalled 14,092. Over $15,500,000 of damage resulted from 76 fires.

MANITOBA'S DAIRY PRODUCTS

The dairy products of Manitoba were valued at $5,900,000 in 1917.

The following record of *The Monetary Times* shows Canada's fire losses month by month for the last eight years:—

	1910.	1911.	1912.	1913.	1914.	1915.	1916.	1917.
January	$ 1,275,246	$ 2,250,550	$ 3,002,650	$ 3,913,385	$ 2,796,312	$ 1,249,886	$ 1,649.217	$ 1,918,660

A year prior to the war, in 1913, the yield of Dominion government bonds averaged 3.56 per cent., and to-day the maximum may be set down at 5.75, an advance of 61.8 per cent.

At an adjourned meeting of the Greater Winnipeg Water Board on Monday it was decided to send Mayor Davidson and the Commissioners of the Greater Winnipeg Water District to Ottawa and Montreal to interview the Minister of Finance and the city's fiscal agents in regard to raising the money necessary to carry on the coming year's work on the pipe line. The board will require in 1918 about $4,000,000, and perhaps an additional $2,000,000 in 1919.

In the Chatham district of Ontario the yield of sugar beets was 100,000 tons for 1917. The capacity of the three factories there are 300,000 tons. The chief cause of the shortage of supply of raw beets is the difficulty in getting labor, which promises to become a still more serious question during the current year.

DAY OF INDIVIDUAL TRUSTEES IS PAST

Progress of Trust Companies' Business Last Year—Life Insurance and Estates

By A. E. PARKER.

The outstanding features of the developments that have taken place which are of special interest to trust and loan companies during the past year would appear to be those referring to:—(1) The provincial rural credit schemes. (2) The continuance of the moratorium in Manitoba. (3) The administration of the several provincial acts for the protection of the property of soldiers on active service. (4) the diminishing of the supply of old country funds. (5) The administration of soldiers' estates. (6) The noticeable increase in the amount of life insurance being placed by the people of Canada. (7) The effect of conscription. (8) The question of the advisability of the continuance of the appointment of individuals by the various governments to execute trusts that could be better administered by a trust company.

Rural Credit Schemes.

The success of the various rural credit schemes is of such vital interest to the respective provincial governments that they will find it necessary to make conditions such that the security offered to mortgage companies will be of a much more certain value than heretofore. The competition of the provincial authorities is undoubtedly welcome so long as it remains fair competition. When the various schemes are looked into, it is questionable if the competition is fair and it is hardly necessary to point out that if these government schemes are run on a proper business basis, it will be found that the cost to the borrower will not be any less than it would be if he dealt with a well-managed private institution.

In addition to the question of the fairness of the competition and the maintenance of the low rate of interest that has been promised by government officials, there is the serious question as to whether such a scheme can be properly handled by any department of the government. Previous experience has shown that government departments cannot carry on business in such an economical and satisfactory way as the private corporation where individual initiative is able to take full advantage of all opportunities presented, being entirely free from political influence and domination.

Effects of Moratorium.

During the past year, the unfortunate effects of some of the provisions of the Manitoba moratorium have been more pronounced than they were in the early stages of the war. Financial conditions are gradually reasserting themselves and in consequence, borrowers, with few exceptions, are in a position to pay at least the interest and the taxes on the properties covered by mortgages. It is found, however, that full advantage of the moratorium is being taken in many cases where it is obvious that moneys that should be used in paying indebtedness to mortgage companies, is being used for other purposes.

The several provincial statutes with reference to the protection of the property of soldiers on active service have been administered, with a few notable exceptions, in a manner worthy of commendation and it is creditable to the men who have volunteered for active service that in very few cases has advantage been taken of the protection afforded by the acts.

Withdrawal of British Funds.

There is one serious feature of the events of the past year, namely, the gradual withdrawal of funds formerly invested in this country by British investors. This money is being withdrawn from Canadian investments and is being invested in Great Britain. We know that the interest rate has increased to a great extent in the old country, and in view of this, it is just possible that a great deal of the money will never be returned to Canada. We expect the conditions that will exist after peace is declared will be such that there will be an enticing field for investment in Europe. Therefore, the question of taking such steps that will enable Canadian financiers to obtain European funds for investment in Canada after the war is a matter that should receive the closest attention of all the financial interests of Canada that would be benefited by this return of old country money.

The enlistment of the men who have gone to fill up the ranks of Canada's army has been a matter of serious concern to the country at large, and perhaps more particularly to the agricultural interests. From the point of view of a trust company that has many estates made up chiefly of farm lands, the past year has been one of considerable anxiety. It has been found difficult to obtain an adequate supply of labor in some cases, and there is no doubt that the foreign element in the community has profited considerably by the increase of wages due to the scarcity of labor caused by the enlistment of our loyal population. If the war continues for another year, this is a matter that will have to receive attention at the hands of the proper authorities.

Estates of Soldiers.

What might be termed a new feature of trust company business has been the increase in the number of estates under administration of soldiers who have been killed on active service. In many of these cases the beneficiaries reside in the British Isles, and are, therefore, usually ignorant of the conditions prevailing in this country. There has also been, as might be expected, a lack of information in connection with the assets and liabilities of some of these estates. Many of the estates have been made up entirely of homestead entries. In this connection, the services rendered to the beneficiaries by the Canadian militia department, both through its offices at Ottawa and through its officials in England, have been of great assistance and value. The administrators especially have reason to be pleased with the efficient, prompt and courteous manner in which information has been given with reference to the affairs of these soldiers who have given up their lives for the great cause.

The writing of life insurance is in the ordinary way outside of the jurisdiction of the trust company, but it is with pleasure that officials of trust companies note that the amount of life insurance being placed with the various companies in Canada is increasing to a remarkable extent. This augurs well for the future and perhaps no body of officials are more competent to speak of the benefits of adequate life insurance than those officials connected with trust companies who see from day to day in the course of their duties, the value of such protection, especially when the head of the family is a man who has numerous liabilities as well as numerous assets.

Day of Individual Trustees Past.

The trust company business has increased from year to year and the success of the various companies engaged in the business in Canada has been a token of the respect and regard that these companies have earned from their clients. It is now an acknowledged fact that individual trustees are not only unnecessary, but also a relic of the past. It would, therefore, be a wise decision if all government authorities decided that all positions of a trust nature at the disposal of the governments, should be given to a reliable trust company. The day of individual trustees is past and the various governments should be the first to lead the way in the new order of things. Trust companies have by their past actions earned this additional recognition on the part of the governments concerned.

As a final word on this subject, the writer would put this question. Are the trust companies of Canada sufficiently progressive? We hear of combinations of mortgage companies, combinations of manufacturers, in fact combinations of every class of business interests throughout the Dominion, but so far, we have not heard of a combination of the trust companies. These combinations are not of the sinister kind, but are formed with the object of promoting the mutual interests of all members of the combination by the raising of business standards and the increasing of the efficiency of methods used by each and all of the companies. Perhaps the time has now come when the trust companies should get together and compare notes for the mutual benefit of all concerned.

It was estimated that to have secured a distribution of the third Canadian war loan equal to that of the first Liberty Loan we should have had 280.000 subscribers. The Victory Loan campaign committees asked for at least 200,000 subscribers to the present loan; there were 802,000 subscribers.

Of the world's total population of 1,691,000,000, about 1,342,000,000 live under the flags of the Central Powers' open enemies in the war. About 40,000,000 inhabit the countries which have broken relations, and 132,000,000 are neutral, while the population of Germany and her allies is about 177,000,000.

HYDRO-ELECTRIC COMPANIES

Through the generation of Hydro-Electric Power, the Coal resources of Canada are conserved, and the necessity of importing thousands of tons is eliminated.

The demand for Hydro-Electric Power in Canada to-day seems to be limited only by the ability of all companies generating same to supply it. This demand is growing very rapidly.

We offer and recommend for Investment the Bonds of several Canadian Hydro-Electric Companies.

INVESTMENT POWER IS INCREASING

Better Classes of Bonds and Stocks Bought at Low Prices

By H. BEVERLEY ROBINSON.

That the financial business has been hard hit by the war is a fact that is well known by all. There is scarcely a holder of securities who has not felt the depreciation in values acutely.

The past year started with an improvement for the month of January in the volume of trading compared with the same month in 1916, but the unrestricted submarine warfare announcement by Berlin and the events surrounding the breaking off of diplomatic relations with Germany by the United States in February caused most unsatisfactory and erratic markets during that month.

About the middle of May prices of securities improved and gave the appearance of the beginning of a bull movement similar to that experienced in the fall of 1915 and 1916. The improvement was short-lived, however, and petered out in the latter part of June.

Stock Exchange Business.

Business on the stock exchanges, outside of a few rallies from time to time has, as the year advanced dwindled in volume with steadily declining prices resulting in minimums being placed on stocks on October 30th. The wisdom of this action on the part of the stock exchanges is apparent, as both bankers and brokers alike realized that stocks were selling below their intrinsic value and the placing of minimums no doubt saved a lot of investors from throwing their securities over. In the absence of minimums there would have come a time when investors would ignore the income return their securities gave them and be influenced only by the panicky sentiment which was becoming so prevalent as a result of the continued decline of New York stocks.

During the year there was a large expansion in trading on the Montreal exchange in government bonds. Holders and investors alike have always found a ready market there either to sell or buy these securities.

The vast army of investors who have purchased war bonds during the past three years, (many of whom having for the first time bought a bond), will be a great field for other investments in time to come.

After the war is over, financial conditions with regard to good standard bonds and dividend paying stocks should show considerable improvement.

Building Up Large Reserves.

While Canada is piling up a heavy debt to finance her share of the war, we must not overlook the fact that she has developed her foreign trade to a large extent with the result that her debit trade balance has now changed to a credit of no mean amount. After the war she should be able not only to retain a great deal of the foreign business built up during the past three years, but also enlarge it through her ability to supply a great many things which will be needed in the rebuilding of devastated Europe.

Public works, building operations, etc., in Canada, have as far as practicable been held in abeyance during the war and this in itself will mean large business when peace comes. The majority of our big public utility and industrial corporations have firmly entrenched themselves by building up large reserves and putting their affairs in a very liquid state, so that they will be in a position to take full advantage of peace conditions after the war is over.

Money During War.

It is a true saying that money is worth far more during a period of war than at any other time. Evidence of this fact is the extremely high yield of all classes of securities as compared with pre-war times. During the last few months many investors have been taking advantage of these chaotic conditions to purchase outright the better class of bonds and stocks.

Throughout the latter months of the year particularly there has been a tendency on the part of Canadian banks to curtail rather than expand their loans to brokers and others against stock exchange securities. The attitude of the banks in this respect has probably been prompted by a sense of "first duty to the state," and a feeling of uncertainty as to what might be required of them by the Dominion government in the way of temporary, direct or indirect financial assistance. They have doubtless considered that throughout the duration of the war it was their duty to trim their business so that they might be prepared to meet any reasonable call from the government with the least possible shock to the agricultural and commercial business of the country. It seems reasonable to expect that until the end of the war is in sight the Canadian banks will pursue a policy of strengthening their cash reserves.

The whole-hearted manner in which the government of the United States has taken hold of the allies' war problems has to some extent relieved the feeling of anxiety which previously existed in Canada, but at the same time the active participation of the United States in the war has necessitated the raising of such colossal government loans for their own use that the United States market has practically been closed to us as a field for the raising of war loans.

To Encourage Thrift.

In order to encourage thrift and promote the investment in well-seasoned dividend-paying listed stocks among the salaried men and those of moderate income our firm recently inaugurated a systematic investment plan, by which such securities are brought within the reach of this class of investors. They are enabled by our plan to acquire securities and pay for them over a period of months.

The plan is becoming popular and the present low level of securities makes its attractiveness more apparent. In time a widening of the investment field should result.

Canada's aim in the future must be to develop her vast natural resources and increase her agricultural production. We are doubtless in a unique position to accomplish much in these respects and it appears to us perhaps our greatest need when the war is over will be an educational campaign, having as its object the bringing of all to a realization of the possibilities of our country's future if we but determine to do our utmost to work in harmony to develop it.

RURAL CREDITS IN ALBERTA

Review of Recent Legislation—Twelve Hundred Applications Under Farm Loan Act

BY W. V. NEWSON.

In the ordinary course of events, decades of persistent agitation would have been necessary to bring about what the stimulus of a great war has accomplished in a few short years. This is especially true with respect to rural credits legislation in the Western provinces. With due allowance for the progressiveness of the Western parliaments, it is not too much to say that the war and the consequent necessity for greater production without the costly frills of the middleman are largely responsible for the despatch with which these rural credit enactments were brought into being. The province of Alberta decided concurrently with the other Western provinces that if the functions of a middleman were necessary they should be performed by the government without the usual profits. Dealing with the commodity of loans, various plans were, therefore, drafted with a view to giving the farmer his working capital at actual cost, and at the 1917 session of the Alberta legislature these took the form of the following acts: (1) The Alberta Farm Loan Act. (2) The Live Stock Encouragement Act. (3) The Alberta Co-operative Credit Act.

Alberta Farm Loan Act.

This act proved to be very attractive to the average farmer, who needed a long-term mortgage loan for ordinary improvements or for the extension of his holdings. To make the act a success, however, investigations had to be made with a view to obtaining a steady supply of money at such a rate that the farmer would make some profit out of his business after he had repaid his principal and met his interest instalments. From the passing of the act up to the present time, war financing in Canada and the United States has absorbed all the money that might have been available for this worthy purpose. Little has, therefore, been done in respect to bringing the act into full operation.

Canada's Victory Bonds

are the most popular Bonds ever issued in this country.

No other security has over 700,000 holders and, therefore, no other Bonds in Canada have such an excellent and widespread market.

MANITOBA FARM LOANS ASSOCIATION
WINNIPEG *MAN.*

The provincial treasury department has, however, done some preliminary work with the object of distributing information and preparing the way so that the organization may be complete and ready for business when sufficient funds are available.

In October last, the department had received communications from over 1,200 prospective applicants, 60 of whom specifically stated the amount of their requirements. These averaged approximately $1,675.

Live Stock Encouragement Act.

Any five or more persons engaged in practical farming in the province of Alberta may, under the provisions of this act, jointly apply to the live stock commissioner for a loan, not to exceed $500 each, for the purpose of buying cattle. The loan is secured by the joint note of the borrowers, supplemented by the guarantee of the province. The notes may run for a period not to exceed five years, with interest not to exceed 6 per cent. per annum.

By agreement with local banking institutions to provide funds for loans approved under this act, the provincial treasurer had guaranteed to October, 1917, notes amounting to $250,000.

The total applications to September 30th, 1917, may be represented as follow. Completed, 72; rejected or withdrawn, 28; awaiting fees, 84; under investigation, 232; Total, 416.

The 84 cases awaiting fees represent approximately $190,000.

Any person who has made a homestead entry may take advantage of the provisions of the act. It will, therefore, be seen that it supplements the other rural credit legislation by giving the homesteader a chance to enter the field of stock-raising, thereby adding not only to his material prosperity, but to his mental welfare. No one, perhaps, can appreciate more the contentment to be found in the association with animals than the new settler on an isolated homestead.

It is hoped that the progress so far made augurs well for the stability of the cattle industry in Alberta and assures the small farmer of some measure of independence.

Alberta Co-operative Credit Act.

The preceding acts were designed to encourage production. There was still required some legislation to help the farmer to market his produce and purchase his supplies to the greatest advantage, and to meet this need the Co-operative Credit Act was passed. That the principle of co-operation is sound has been proved in several European countries, perhaps more notably in Denmark. It is on record that before the co-operative movement began in Denmark only one per cent. (1%) of the farmers bought their supplies economically and sold them profitably, whereas now 99 per cent. of the farmers do so. If such a gain can be made in Denmark, where the soil and climate are far from ideal, there is reason to expect results at least equally favorable in Alberta, where farming conditions are excellent.

There are, nevertheless, many difficulties attending the organization of societies under this act, which may be largely attributed to the scattered population and the cosmopolitan nature of the rural communities. A beginning, however, has been made, and, while the past season's operations were all arranged for before the act came into effect, the department has dealt with many enquiries, and has also distributed literature calculated to interest the farmers of the province in the movement. During the present winter, lecturers and organizers are inaugurating and completing the formation of a number of co-operative societies before the spring work of 1918 begins.

One interesting feature noted in the preliminary work of the department is that settlements comprising those foreign peoples who have been associated with similar systems in Europe appear to more readily discern the better communal conditions that will obtain through the operation of the co-operative system in the province of Alberta.

The trade returns for the eleven months to November 30th show exports of $1,399,018,936, and the excess of exports over imports $455,519,369, the latter comparing with $262,957,000 for the same period in 1916, and $115,980,000 for the same period in 1915. In the corresponding eleven months of 1912 there was a balance against Canada of $281,123,000.

TRUST COMPANIES' BUSINESS LAST YEAR

Farmers are Paying Off Mortgages—Interest Rates Obtainable Were Less

By W. E. RUNDLE.

The main business of trust companies, as they are organized in Ontario, is to act as administrators, executors and trustees of estates. The general experience is that no matter whether times be good or bad, the average of business received from year to year is very much the same and denotes gradual and continuous progress. The past year has been no exception. Of course, some years show a greater progress than others; for instance, when some exceedingly wealthy citizen of the province dies, having appointed a trust company as his executor.

Incidental to the management of estates, trust companies have established investment departments. These departments take care of the investment of the funds of an estate from time to time as the original assets are realized. Such investments, unless the will particularly directs otherwise, are made in first mortgages upon the security of improved realty (largely farms and middle-class city residences), and government and municipal debentures. The investment department of a trust company also takes care of the investment of the trust company's own funds, both capital and guaranteed. It is in connection with the investment phase of the trust company business that there have been some interesting developments during the past year or two which might be of interest to readers of *The Monetary Times' Annual.*

Farmers Paying off Mortgages.

There has been a growing tendency on the part of the farmers to pay off their mortgages as they mature. Especially is this the case in the provinces of Manitoba, Saskatchewan and Alberta. In these provinces, Ontario trust companies which have branch offices there have of recent years largely invested that part of their capital and guaranteed funds which they have been placing in farm mortgages. The reason for this policy is, of course, the higher rates of interest which have maintained in the provinces mentioned over those obtainable for similar mortgages in the provinces east of the Great Lakes.

Experience has shown that the security is as good as that in any other part of Canada. The good crops and the high prices which the farmers have received for their products have placed the agricultural community of the Dominion in a greatly improved financial position; hence the ability of many to pay off their mortgage indebtedness. This, of course, is a splendid thing for the country generally,—and what is good for the country must inevitably result for the good of its financial and other institutions. But the immediate effect is manifestly to reduce the earnings of trust companies and all other mortgage loan institutions on their mortgage investments, because they cannot reinvest at as favorable interest rates. Moreover, as the demand for mortgage loans has been greatly reduced since the war, the repayments to which I have referred have been reinvested in government and municipal securities,—largely the Dominion war loans. This class of security, while not yielding as high a rate as the mortgages paid off, have yielded a much higher rate than was obtainable previous to the war on similar securities.

Reduction in Average Rate.

The net result, however, during the past year has been a reduction in the average rate of interest obtainable on the total invested funds. Whether or not this loss has been overtaken by the general increase during the year in other departments of trust companies' business, will depend upon the experience of the individual companies. Speaking for our own company, we will overtake the loss in interest on mortgage loans through the increased commissions we will receive on increased estates business which has come to us during the year.

There is a growing disposition of the public at large in Canada to appoint regularly authorized trust companies for the purpose of administering estates and trusts rather than private individuals.

CITY OF WINNIPEG

PROVINCIAL GOVERNMENT LOANS

Total Issues Last Year Were $15,300,000, Including Ontario's $8,000,000 Hydro Issue

The provincial government loans last year totalled $15,300,000. This compares with $33,173,000 in 1916, $47,000,000 in 1915, and $36,748,644 in 1914. The total last year ordinarily would have been only $7,300,000. The issue of $8,000,000 of Ontario bonds in respect of the acquisition of the Ontario Power Company by the Ontario Hydro-Electric Commission, however, increased the year's total to $15,300,000. This is the smallest total of provincial government loans for many years.

Five of the nine provinces were in the market, the four exceptions being Quebec, Nova Scotia, Prince Edward Island and British Columbia. In 1916 seven of the provinces were in the market.

During Ontario's fiscal year, the province borrowed $3,000,000, out of which treasury bills of $2,000,000 were paid. The net borrowing was, therefore, $1,000,000. That loan was the only one made during the calendar year 1917, with the exception of the Hydro-Electric issue. The province issued last year $8,000,000 of 4 per cent. 10-year bonds on behalf of the Ontario Hydro-Electric Commission in regard to the acquisition of the Ontario Power Company by the commission. This made a grand total of $9,000,000 of bond sales for Ontario.

Alberta and Manitoba.

Alberta made an issue of $1,500,000 5 per cent. 5-year bonds, due 1922. The issue was offered to the public at 94.70.

In a statement to *The Monetary Times*, the deputy provincial treasurer of Alberta said: "The rapidity with which these bonds were absorbed was very gratifying to the province, and is a strong indication of the confidence of the investing public in securities of this class. In strict adherence to its resolution of war-time economy, the province has eliminated all but the most essential items in its programme of capital expenditure. It was, therefore, not necessary last year to borrow the full amount authorized by the legislature."

Manitoba made one issue of $2,000,000 for the following purposes: New Parliament Buildings, $1,500,000; Manitoba Farm Loans Association, $100,000; Rural Credits Association, $5,000; Psychopathic Building, $50,000; Settlers' Animal Purchase Act, $100,000; Demonstration Farm, $16,000; Brandon Asylum Extension, $100,000; Brandon Asylum (apart from new building), $20,000; Underground Electrical Work and Transforming Equipment, $35,000; Government Grounds, north of Broadway, $4,000; Ninette Sanitarium, $50,000; Dauphin Judicial District, $20,000.

Saskatchewan's Greater Production Loan.

Saskatchewan issued $1,500,000 5 per cent. 15-year bonds, of which about one-third was sold in the United States. The province also announced in September the flotation of the Saskatchewan Greater Production loan. The object of this loan is to raise money within the province to provide the necessary funds for the carrying out of the scheme of rural credits under the Farm Loans Act, the purpose being to supply money at cost to farmers requiring it for the development of their farms and the bringing about of increased agriculture and live stock production in Saskatchewan.

Ten-year Saskatchewan Greater Production loan bonds are being issued in denominations of $20, $100, $500 and $1,000, bearing interest at 5 per cent. per annum, payable half-yearly. The bonds are redeemable at par at any time upon three months' notice to the provincial treasurer. It is understood that to the end of 1917, approximately $800,000 of these bonds had been sold.

New Brunswick sold an issue of $500.000 5-year 20 per cent. bonds in July.

PRINCIPAL STOCK ISSUES LAST YEAR

Since the table on page 166, showing the principal stock issues made last year, was completed, the Imperial Oil Company of Canada has made a new issue of 50,000 shares, par value $100 per share. Shareholders were entitled to subscribe for one share for every five owned.

CANADIAN FLOTATIONS IN LONDON

Only Three Were Made Last Year—Sales Since 1905 Total £305,299,560

Only three Canadian public flotations were made in London last year. These were issues in May of £205,000 of stock by the Canada Land Corporation, and £1,025,000 shares of the Imperial Tobacco Company of Canada. In December the Grand Trunk Railway issued £1,000,000 6 per cent. 3-year notes to replace notes falling due. The capital in the first case was raised by a 4 per cent. assessment on a portion of the company's shares. The Imperial Tobacco Company of Canada sold 1,000,000 ordinary shares of $5 (£1 0s. 6d) at 19s. per share, being an issue of 93. The British Treasury's permission was obtained to the three issues.

Canadian public borrowings in London in 1915 amounted to £8,235,000, the lowest total on record, with three exceptions, since 1905. In 1914, our public borrowings in London were £37,777,271, and in 1913 £47,363,425. The total for the latter year was the highest on record.

The low totals during the past three years are accounted for by the continued closing of the London market to practically all flotations except war loans. The bulk of Canadian funds in 1916 were raised in the United States. Temporary advances, however, have been made to Canada by the Imperial government for war purposes, since October, 1914. On the other hand there have been Canadian advances to Great Britain for purchases here.

Thirteen Years Record.

According to *The Monetary Times'* records, Canada's public borrowings in London during the past thirteen years have been as follow:—

1905	£ 13,530,287
1906	6,427,500
1907	11,203,711
1908	29,354,721
1909	37,411,723
1910	38,453,808
1911	39,855,517
1912	32,456,603
1913	47,363,425
1914	37,777,271
1915	8,235,000
1916	1,000,000
1917	2.230,000
Total	£305,299.560

The three Canadian flotations in London in 1915 were as follow:—

Dominion government, £5,000,000 4½ per cent. five or ten-year bonds issued at 99½. This loan was over-subscribed.

Grand Trunk Railway, £2,500,000 5½ per cent. five-year notes at 99. Forty-four per cent. of this issue was left with the underwriters.

Canadian Northern Railway £735,000 5½ per cent. one-year notes. This issue was made to replace notes maturing in July, 1915.

Only one Canadian flotation was made in 1916. This was an issue in August of $1.000,000 6 per cent. 20-year debentures of Canadian Vickers, Limited, Montreal.

Details of Six Years' Loans.

The following table gives details of the purposes of our loans in London for the past six years:—

Purpose.	1912. £	1913. £	1914. £	1915. £	1916. £	1917. £
Government	5,500,000	9,800,600	16,260,000	5,000,000	....	....
Municipal	5,472,049	13,926,470	6,469,487	....	....	....
Railroads	9,002,585	13,179,170	11,943,800	3,235,000	....	....
Mining	650,000	225,000	175,000	....	....	....
Financial	2,772,000	....	....	....	....	....
Mortgage, land and lumber	1,704,975	2,451,332	705,329	....	....	205,000
Industrial	7,354,994	7,780,847	2,223.655	....	1,000,000	2,025,000
Totals	32,456,603	47,363,425	37,777,271	8,235,000	1,000,000	2,230,000

Complete records of Canadian bond sales in all markets last year appear on other pages.

RESULTS OF MANITOBA'S MORATORIUM

Law was Hardly Necessary—Gradual Adjustment Might Have Been Better

(By a Western Correspondent.)

The Manitoba moratorium must not be confused (as has so frequently been done) with a somewhat similar act but one only intended to affect the property and interests of a particular class, namely, "The Volunteer Relief Act." That was an act passed for the protection of the soldier on active service, a very laudable motive with which everyone was in hearty sympathy. Unfortunately, however worthy the object of that act was, like other legislation hurriedly drafted and made law, the act has lent itself to many abuses, causing perhaps more trouble and complications than the moratorium proper. The latter act was passed to temporarily protect property interests during the war.

Was it Necessary?

Was the Moratorium Act necessary and has it been a help or otherwise? In every real estate boom period there are two principal classes at work. First, the speculator who puts as little money as he can into his operations and deals extensively but chiefly on narrow margins, and second, the more moderate investor, who buys and sells with more cash in his deals, in the hope of good profits. When the boom breaks the former, with a large "paper" but small "cash" interest in the property he holds, drops out with a larger covenant liability than he can ever hope to redeem, and is, therefore, insolvent from the first and does not deserve nor does his case call for protection; the latter having a larger cash interest in his transactions, has not likely undertaken more than he can reasonably well protect, and is financially responsible for. The breaking of the "boom" while it will tie him up, possibly for a term of years, with care, economy and reasonable leniency (usually granted) on the part of his creditors, he will "pull through."

Had there not been a war, the aftermath of the "boom" would have had to be borne by those affected, in the same way as in times past, when similar conditions existed, and it is a question if it would not have been better if a gradual adjustment as "between man and man" had been allowed to take place. The war was given as the reason for the passing of the moratorium or protective legislation whereas it is now pretty generally admitted that had war conditions creating a demand for all land products, as well as many other articles, at greatly increased prices, not existed, the financial depression after the real estate boom, might have been much worse. In place, therefore, of the gradual adjustment which would in due course have taken place, the moratorium has protected the speculator as well as the more legitimate real estate investor, and instead of thrift and economy being encouraged and exercised, as would otherwise have been necessary, a continuance of extravagance has resulted and postponed in many cases the evil day and in place of settlement being made, while much money has been in circulation and there was prosperity in many directions, from abnormal conditions, many adjustments which still have to be made, will likely become necessary in less prosperous times after the war, and be all the more difficult to accomplish.

The mortgage lending companies who have the facilities for carrying and helping deserving clients, have not been detrimentally affected by the moratorium, as their customers for the most part have reasonably met their payments and have not taken advantage of the moratorium. Small individual investors, however, who were dependent for their living on the income from mortgages, etc., who may not have had such choice security, and many of whose borrowers have taken advantage of the moratorium, have suffered most. Such small investors were equally citizens of the country and worthy of consideration as were the borrowers or debtors. The moratorium protects the one and hurts the other.

Consideration of such facts as above discussed rather gives the impression that a general law such as the moratorium, was hardly necessary, and that had some arrangement been made in Manitoba whereby any special cases of hard treatment on the part of creditors could have been brought before the proper authorities to be dealt with, as was done in some of the other provinces, it would have sufficed

HOW THE SEED GRAIN LIENS ARE BEING REPAID

The Dominion government in 1915 advanced relief to those in western Canada who lost their crops through drought, etc., in 1914. This relief was for furnishing food for settlers, feed for stock, and seed grain for land thoroughly cultivated. The object of the administration in making these advances was twofold.

1.—To alleviate the destitute settler, thereby preventing starvation or emigration—the only alternative.

2.—To enable farmers to seed every available acre, it being realized that the future of our country depended in a great measure upon the crop.

There was advanced for seed grain $7,600,000, and for other goods by way of relief and fodder for animals $4,400,000, making a total of $12,000,000.

In September, 1915, the Dominion government issued a statement announcing easier conditions for the repayment of these loans. The repayment in full was actually due on January 1st, 1916.

At a conference in Calgary in September, 1916, it was recommended that those farmers who had not discharged their indebtedness should be given until June 30th, 1917, to pay up, and that after that date the holder of a mortgage on their property might pay off the lien and add the amount to the mortgage at the named rate of interest.

The following is an official statement of the seed grain lien situation on September 30th, 1917:—

1917.	Seed grain and fodder.	Relief.	Total.	Changes—Three-month periods.
Securities taken	$7,560,760	$4,748,846	$12,309,607	......

PAR OF EXCHANGE ON EUROPEAN COUNTRIES

The par of exchange on European countries, calculated from the United States Mint's intrinsic valuation of their standard coin in terms of United States currency, is as follows:—

Austria	20.3 cents to the crown.
Denmark	26.8 cents to the krone.
England	$4.74 to the sovereign.
France	5.18⅛ francs to the dollar.
Germany	95.2 cents to four marks.
Holland	40.2 cents to the florin.
Russia	51.2 cents to the rouble.
Spain	19.3 cents to the peseta.

Par of the New York exchange on Italy and Switzerland is the same as that on France; the franc, lira and peseta are all valued by the Mint at 19.3 cents, and the number of each of them in one dollar is, therefore, the same. Par of exchange on Norway and on Sweden is the same as on Denmark. The Mint valuation of one German mark is 23.8 cents; by old custom the American foreign exchange market reckons rates on the basis of four marks.

EUROPEAN BANK RATES

The following table shows the official minimum discount rate of all the European State banks, with the respective date at which the present rates were established, and the rates at the corresponding dates in previous years:—

Bank of—	Date of last change.	1917.	1916.	1915.	1914.
England	Apr. 5, 1917	5	6	5	5
France	Aug. 20, 1914	5	5	5	5

A Safe and Profitable Investment in a Basic Industry

THE pulp and paper industry is one of Canada's basic industries, and we can now offer and recommend, an investment secured as to principal by mortgage, on the properties and undertakings of one of Canada's largest producers of pulp and paper.

This investment will yield a minimum interest return of 7%, safeguarded by ample earning power, and includes as well a 50% bonus of Common stock,—enabling the investor to participate in the Company's valuable equities and large surplus earnings.

In several years of successful experience we have offered no more attractive industrial investment. A request by post card to-day will bring you full particulars free of expense and without obligation to purchase.

VALUE OF OUR STOCK EXCHANGES

Important Factor in Finance—Benefits of Short Selling—Stock Exchange Practice

By C. TOWER FERGUSSON.

Kings and rulers have always needed money, and usually they have succeeded in getting it. In earlier days, if they were victorious in their wars, of course, they made the other fellow pay, but if not, they obtained it from their own people by unjust exactions and often confiscations of properties under one or another pretext.

The saying is attributed to Macauley, that after the reign of William III. (Orange), "Kings borrowed with intent to repay." Then followed the National Debt of England. The obligations thus created by the government were in the beginning disposed of to the people in many ways. Sometimes they were sold at church-doors to the worshippers who congregated there. At others they were hawked about from hand to hand. To remedy this condition of affairs the London Exchange was founded in 1773. An old record says: "In this year the brokers and others of New Jonathans, which was the name for a coffee house in Cornhill, came to the resolution that instead of being called 'New Jonathans' it should be called the stock exchange, which is to be wrote over the door."

Early Brokers in France.

Earlier even than this in France a group of stock brokers, afterwards constituting the "Bourse," were appointed by Louis XIV. In that country the Crown did not lose control of revenue because of these appointments, but claimed part of the earnings of the brokers as a return for the privileges. Even to this day in France the regular members of the Bourse receive their appointment from the government. There is a smaller exchange, called the "Coulisse," where the membership is free.

These exchanges having been erected in both countries, formed a market on which government securities could be bought and sold, and in which the public could lend their money to the different governments and receive obligations in the form of bonds, securing to them the repayment of funds so invested.

From this small beginning, the London stock exchange soon developed a wider market, in which East India securities and the bonds and stocks of chartered companies were bought and sold.

Bonds of China and Siam.

In more recent years, it has assumed enormous proportions, both in the volume of business and in the variety of shares and government securities listed thereon. For instance, there is hardly a government in the world whose securities cannot be purchased and sold in London. The immense Kingdom of China has its bonds listed, as well as those of little Siam. If the investor in stocks is partial to the national beverage, there are scores of brewery securities in which he can place his money, but on the other hand if he is of temperance leanings, he can invest in Bovril shares or in Apollinaris common or preferred, to say nothing of Ceylon tea bonds.

The New York stock exchange, while not so old as those of England and France, has nevertheless in its one hundred years of existence filled a large place in the growth and development of the United States. During the Civil War it was to members of the stock exchange and the banking fraternity of Wall Street that Secretary Chase looked to obtain the money for carrying on the affairs of the nation, and builders of railroad systems have leaned on the exchange in financing their vast enterprises. Stock exchanges as institutions, therefore, have borne the stress of time, which is at least one test of merit. Since their inception, they have from time to time been subjected to criticism, which resulted in judicial enquiry into their functions and practices. In 1877, a Royal Commission was appointed in England to enquire into matters relating to the London exchange, with a view of bringing it more closely under government control. A prominent member of parliament, who was one of this commission, said with regard to this "incorporation of the stock exchange would mean that the rules established thereby would be stereotyped, and could only be altered even in the minutest detail with the approval of the department of state. In my opinion, this requirement would be either mischievous or nugatory." Another extract from the report says: "This Royal Commission has been sitting more than 12 months, yet nothing important or reliable has been volunteered of a character adverse to the general practices or conduct of business on the stock exchange."

In 1908, after the outcry with regard to government interference in New York State, the Hon. Chas. E. Hughes, then the governor of the state, and more recently the Republican candidate for the Presidency, appointed a commission to ascertain if changes were advisable bearing upon speculation, etc., on the stock exchanges of New York. This commission went inexhaustibly into the matter and their report was presented on June, 1909. Their conclusions were to the effect that any changes looking to improvement in the methods of the exchange could better be put in force by the stock exchange authorities themselves than by any interference of the state. This commission also dealt with the general practices of the exchange relating to "margin trading" and "short selling." In referring to the first named an extract from the Hughes' Report reads as follows, namely: "Purchasing securities on margin is as legitimate a transaction as the purchase of any other property in which part payment is deferred. We, therefore, see no reason whatever for recommending the radical change suggested, namely, that margin trading be prohibited."

Very good people piously inveigh against "short selling" as an iniquity and a sin, and yet when one considers it in relation to general business, it does not seem quite so sinful. Manufacturing concerns, for instance, will contract to build a bridge at a given time and yet they have not on hand the iron forming part of the structure, nor have they even contracted for the labor which must go into the enterprise. They expect in the ordinary course of things to be able to purchase the material and to hire the labor. They enter into the contract in good faith, without having in hand either the one or the other. The benefit of "short selling" to the exchange lies in the fact that on the one hand it prevents undue inflation of values, in the case of a boom, and on the other hand the filling of short contracts often stays a falling market and prevent it running into demoralization and panic. It is a dangerous practice, however, and the "shorts" often find themselves in trouble. In one of the wars of King Henry V., the French King sent word to him that it was better he should surrender quietly rather than that the French should come and take him. His reply by the ambassador was what everyone would expect of him and he added: "The man that once did sell the lion's skin while the beast lived, was killed himself in hunting it." The "bears" frequently find equal difficulty in securing that which they have sold before it was in their possession.

Laws have from time to time been passed in the United States and also in other countries to prevent "short selling," but such laws have invariably been repealed.

Vocabulary of Stock Exchange.

Institutions of long-standing have generally a vocabulary of their own. In this regard the one under review is no exception. On the "floor" of the exchange the "bulls" and the "bears" struggle with one another, sometimes one in the ascendency, sometimes the other. On the outside gambol the most numerous class of quadruped, namely, the "lambs." In the ordinary business from day to day there are "slumps" and "bulges." The meaning of dealing in "puts" and "calls" is known to many, but very few would understand "contango" and "backwardation" so well. The poor fellow who fails, according to the New York phraseology, is "sold out under the rule," but in England he would be "hammered." Holding a "seat" simply represents membership in the exchange.

The real testing time for security markets came in 1914, when the world was suddenly plunged into the Great War. When the storm first struck, the stock exchanges reeled, and for a time suspended open trading, this being true even in New York. They soon got their bearings, however, and gradually resumed normal operations, until within a year or so regular open markets for securities were re-established in the United States and Canada.

The success of those at the helm of these institutions, in safely piloting them through this time of crisis, is an earnest that during the coming period of reorganization, they will be equally well handled and will prove a valuable factor in the financial upbuilding of the country during the development of the coming years.

CAPITAL SUBSCRIPTIONS IN THE UNITED KINGDOM, 1909-1917

(Written for *The Monetary Times* by the Editor of "The Statist," of London, England.)

Table A herewith indicates the home borrowings of the British government during the period from January 1st, 1914, to November 17th, 1917. It will be seen the statement includes all forms of borrowings by the British government except by the issue of "other" debt, which represents loans raised abroad. In part, the large sales of exchequer bonds made in 1916 were effected by the sale of United States and other foreign securities under the scheme of the treasury to regulate exchanges. From the total proceeds of loans raised at home has to be deducted the loans and advances Great Britain has made to her Allies and Dominions in order to arrive at the net sum borrowed at home for war purposes. For example, between January 1st, 1917, and November 17th, 1917, the British government has borrowed at home for war purposes a sum of £1,130,610,000 and has advanced to Allies and Dominions approximately £545,000,000, making net home borrowings for war purposes of, roughly, £585,610,000.

Table B is designed to afford a rough indication of government loans in Great Britain for the past five years. First, those for the British government itself; secondly, estimated figures of loans and advances to Allies and Dominions; and, thirdly, the foreign and colonial government loans offered for public subscription in the London market.

Table C, beyond containing a summary of the data contained in Table B, shows the capital that has been subscribed for municipal, railway and industrial purposes during the past nine years, thus enabling a comparison to be made between pre-war and war figures.

It should be noted that in all cases the figures are based upon the prices of issue, and, therefore, represent actual capital subscribed and not the nominal amount issued.

Inasmuch as no detailed particulars have been published as to how much money Great Britain has advanced for war purposes to her Allies and Dominions, it is impossible at the present time to furnish the usual statement showing the geographical distribution of the capital subscriptions of Great Britain.

COST OF LOANING OPERATIONS

Expenses Have Increased but Rates Cannot be Advanced —Interesting Statistics

In making loans to farmers and taking care of them after they are made, the cost has been increased by the incidence of war. Salaries, travelling and office expenses have tended to move upwards, despite rigid economy where it was possible to economize further. The margin of profit in this particular class of business has never been a wide one, and where earnings have been slightly above the average, they are due to skilful management and economy. No one could substantiate a general charge to the effect that Ontario loaning institutions are guilty of extravagance. They have a reputation for being otherwise and unless that reputation is fully borne out by fact, their existence would be imperilled. Between the interest paid for borrowed funds and the price charged for them when loaned, the margin is relatively small, and that available for acutal profit varies according to skill and economy of management. It is quite apparent that during the past year or two the companies have been faced with higher costs of operation, thus reducing the margin from which profits on capital employed and expenses can be met. In this respect their experience is very different to so many other classes of business in which profits have been ample to cover additional expense incident to war.

If it was always possible to advance rates as operating costs increased, the margin would be of an elastic character. It is not, however. Farmer borrowers are not making as large demands for money as they did a few years ago and many of them are paying off their loans. The amount of repayments at present is more than enough to cover the new demands, hence the rates to farmers are stationary and show no tendency to advance. If the times were normal, and repayments exceeded new loans, rates would decline, assuming, of course, there was no ex-Dominion demand for money at rates higher or as high as that netted from farm loans. At present, however, the rates prevailing are low in comparison with the cost of the money, and hence the loan companies, as a whole, to sustain the very reasonable rates earned on their capital, cannot reduce rates to borrowers. The only hope of extra earnings rests in cutting down expenses, which, speaking generally, is impossible without impairing efficiency.

The experience in 1916 of thirty-four companies which do a general loaning business, the preponderance of which is with farmer borrowers, shows that it cost $1.70 to take care of every $100 outstanding in the form of mortgages. In the previous year the cost was $1.54. Included in the cost are the following: (1) Salaries, wages, fees; (2) commissions and brokerage; (3) stationery, postage, printing and advertising; (4) law costs; (5) fuel, rent, local taxes and rates; (6) travelling expenses; (7) registration fees; (8) provincial and Dominion taxes and contributions to patriotic funds. Exception may be taken to the inclusion of contributions to patriotic funds as expenses, but on the other hand, it cannot be gainsaid that such contributions are looked upon as obligatory. A representative institution that did not contribute would be regarded as lacking public spirit. Any such idea in the public mind will ultimately breed mistrust, against which every precaution is essential. For this reason contributions to Red Cross and other funds for furtherance of objects of national moment are included in the expenses.

The percentage of expense to total assets in the case of the companies already referred to, was in 1916 $1.35 per $100,

CITY COMMISSIONER, Saskatoon.

or eight per cent. above the ratio ($1.25 per $100) in 1915. In "Table I.," accompanying, it will be noted that the proportion of mortgages to total assets showed the substantial decline of 2.05 per cent. in one year—a tendency that will be more marked during the present year. Normally, this change would be accompanied by a decrease in the rates of expense; new mortgage business being less and the usual cost incident thereto proportionately so. As total assets were slightly higher at the close of 1916 than in 1915, it is apparent that mortgage repayments have been converted into securities, the cost of handling which is not very material, except, under existing conditions, as to depreciation which consideration has not entered into the calculations dealt with in this article.

In "Table I.," the expense ratio indicated, covers operations in several provinces. In 1916, out of $109,000,000 in mortgages held by the 34 companies referred to, $50,000,000 was invested chiefly in Western Canada. Cost of operation in that field is far more expensive than in Ontario. To arrive, approximately, at the difference in cost, the experience of ten companies (Table II.) shows expenses of $1.12 per $100 of mortgage indebtedness outstanding in the year 1916, as compared with $1.01 per $100 in 1915, an increase of 10.89 per cent. The corresponding figures in respect of total assets are $0.85 and $0.89 respectively. Management cost, on the average, of these companies, of whose business about 50 per cent. is in the West, is about 40 per cent. higher than in the case of companies confining their attentions to the Ontario field. It is quite reasonable to assume, therefore, that in the western provinces, not including British Columbia, the cost of doing business will be considerably higher than the average for the companies, a substantial proportion of whose business is in Ontario where management costs are very much less.

TABLE I.

Cost of Management of Loan Companies. (Experience of Thirty-four Companies.)

	1915.	1916.	Change % Inc. or dec.

Per cent. of cost of management to total assets	00.85	00.89	+ 04.70
Per cent. of cost of man- to mortgages	01.01	01.12	+ 10.89

Cost of Loaning Operations.

Of the total assets of 34 representative companies, practically 79 per cent., as shown in Table III., are employed in the form of mortgages, and the balance in liquid securities or buildings and other plant necessary for carrying on business. Upon examination it will be found that those companies with a high proportion of their assets in mortgages have the highest expense ratio. Of course, decided variations occur due to character of business and the locality in which it is carried on. Where small loans are made on city properties and monthly payments have to be collected, the risk and expense are both factors which enter into management costs. In the western provinces the average farm loan is much less than in Ontario, and the cost of lending $3,000 in the latter province, may not, on the average be as great as lending a $1,000 in the former territory. Under these varying conditions and localities many lending businesses are carried on, the general cost of which is indicated in Table III. following:

TABLE III.

Management Cost and Proportion of Mortgages to Total Assets. (Experience of Thirty-four Companies.)

Company	% Mortgages to Assets	% Management Cost to Total Assets	% Management Cost to Mortgages

27	74.641	.763	1.022
28	89.417	1.459	1.632
29	84.805	1.553	1.831
30	93.274	1.133	1.215
31	67,198	.871	1.296
32	93.913	3.397	3.617
33	50.645	1.233	2.435
34	92.793	1.708	1.840
Average	78.924	1.345	1.704

As yet the experience of provincial government loan associations is of too short duration to be regarded as a safe basis in which to arrive at what their average management costs will be. In British Columbia they were, for the first year, over 3 per cent. of the amount loaned. To care for this, provide for interest on bonds sold, and for losses, a rate of 10 per cent. to the borrower would be necessary.

AVERAGE VALUES OF CANADIAN FARM LAND

For the whole of Canada the average value of farm land held for agricultural purposes, whether improved or unimproved, and including the value of dwelling-houses, stables and other farm buildings, was approximately $41 per acre in 1916 as compared with $40 in 1915. These are the latest figures issued by the census office, Ottawa. The average values by provinces are as follow: Prince Edward Island, $39; Nova Scotia, $33.6; New Brunswick, $29.4; Quebec, $52; Ontario, $52.5; Manitoba, $32; Saskatchewan, $23; Alberta, $22; British Columbia, $118.5. In the last-named province the higher average is due to orcharding and fruit-growing.

Of the various short-term notes placed by Canada in New York during the past two and a half years, the principle of conversion to twenty-five-year 5 per cent Canadian bonds was exercised in an almost negligible degree, payment being demanded in United States gold coin at the agency of the Bank of Montreal in New York.

BOND PRICES AND THE OUTLOOK

Review of the Market for Past Twenty Years—Comparison of Prices

By C. H. BURGESS.

The past year commenced with a feeling of apprehension that there would be some new developments in connection with the war which would materially affect conditions on this continent. Financial conditions were unsettled. The Dominion government found it necessary early in the year to offer another loan. Little money, it was anticipated, would be secured from the United States especially after war was actually declared. It was generally conceded it would be advisable to make either an international loan or a loan entirely in the United States in order to secure as much money outside the country and conserve our own resources against the time when the United States markets would be closed to us. However, the minister of finance issued $150,000,000 5 per cent. 20-year bonds at 96 payable in gold in Canada as well as in New York. This was handled through the Canadian dealers (75 per cent. of it through the members of the Bond Dealers' Association of Canada). The loan was subscribed to the extent of $266,000,000. The price did not hold well as for one reason there was no convertible feature in connection with this and the previous issue as with the first war loan due 1925. The price dropped to about 93, when an order-in-council was passed making the two last issues convertible into any new issues running 20 years or over. This stiffened the market price. During this time the prices of all government and municipal bonds was uncertain and kept dropping, more especially as it became evident that we could look very little to the United States for financial help, they having raised one loan of $3,000,000,000 in June, and immediately had to prepare for another issue of $5,000,000,000 in the fall. Canada also had to raise another $150,000,000 in the fall. A country-wide organization with committees in every province, city and county was set up by the minister through the Bond Dealers' Association of Canada in order that the whole country would be covered. During October and November there was practically no other bond business being done. The loan was over-subscribed by more than $270,000,000, or a total of about $415,000,000. At the end of the year prices for government and municipal bonds in Canada ranged about as follow:—

Dominion, 5½ per cent. to 5⅝ per cent.

Province of Ontario, 5.90 per cent.

Large cities and counties, 6 per cent.

Medium sized cities and towns in Ontario, 6¼ to 6⅛ per cent.

Saskatchewan, Alberta and British Columbia provinces, 6⅓ per cent. to 6¼ per cent.

The following is a record of approximate prices of Canadian securities for a series of years:—

1896-1897.

Turning point from depression in Canada following collapse of real estate boom, and succession of crop failures,

Provincial Governments (Ontario, Quebec and Nova Scotia), 3⅛ per cent. to 3¼ per cent.

Large cities and Ontario Counties (Toronto, Montreal, London, etc.) 3¼ per cent. to 3⅜ per cent.

Large Ontario towns and townships, 3½ per cent. to 3⅝ per cent.

Village bonds, 3¾ per cent. to 4 per cent.

1899-1900.

Provincial Governments, 3½ per cent. to 3⅝ per cent.

Large cities and counties, 3¾ per cent. to 3⅞ per cent.

Large towns and townships, 4 per cent. to 4⅛ per cent.

Village bonds, 4⅛ per cent. to 4¼ per cent.

1901-1904.

1902.—Great industrial and stock speculation.
1903.—Reaction from speculation of year before.

Provincial Governments, about 3¾ per cent.

Large cities and counties, 3⅞ per cent. to 4 per cent.

Large towns and townships, 4⅛ per cent. to 4¼ per cent.

Village bonds, 4⅜ per cent. to 4⅓ per cent.

1905-1906.

1907.—Panic year.

Provincial Governments about 3½ per cent. to 3⅝ per cent.

Large cities and counties, 3⅞ per cent. to 4 per cent.

Large towns and townships, 4 per cent. to 4⅛ per cent.

Village bonds, 4¼ per cent. to 4⅜ per cent.

1907-1908.

1908.—Recovery year.

Provincial Governments, 4 per cent. to 4¼ per cent.

Large cities and counties, 4⅓ per cent. to 4¾ per cent.

Large towns and townships, 4¾ per cent. to 5¼ per cent.

Village bonds, 5½ per cent. to 5¼ per cent.

1909.

Great prosperity and real estate boom in Canada commences.

Provincial Governments, about 3⅞ per cent.

Large cities and counties, 4 to 4¼ per cent.

Large towns and townships, 4¼ per cent. to 4⅝ per cent.

Village bonds, 4½ per cent. to 4⅝ per cent.

1910.

Provincial Governments about 3.90 per cent..

Large cities and counties, 4 per cent., 4¼ per cent. to 4⅜ per cent.

Large towns and townships, 4½ per cent. to 4⅝ per cent.

Village bonds, 4⅞ per cent. to 4¾ per cent.

1911.

Provincial Governments, 4 per cent. to 3.90 per cent.

Large cities and counties, 4⅛ per cent., 4¼ per cent. to 4⅜ per cent.

Large towns and townships, 4⅓ per cent., 4⅝ per cent. to 4¾ per cent.

Village bonds, 4¾ per cent. to 4⅞ per cent.

At the end of the year prices for Ontario bonds were about as follows:—

Provincial Governments, 4 per cent. to 3.90 per cent.

Large cities and counties, 4⅛ per cent., 4⅝ per cent. to 4⅓ per cent.

Large towns and townships, 4½ per cent., 4¾ per cent. to 4⅞ per cent.

Village bonds, 4⅞ per cent. to 5 per cent.

1912.

Real estate boom commenced to fail.

Provincial Governments, 4¼ per cent. to 4 per cent.

Large cities and counties, 5 per cent. to 4½ per cent. Counties selling at about 5 per cent. City of Toronto 4⅓ to 4⅝ per cent.

Large towns and townships, 5¼ per cent. to 5 per cent.

Village bonds, 5½ per cent. to 5⅝ per cent.

BRANCHES AT

TORONTO, CALGARY, EDMONTON, REGINA, VANCOUVER, VICTORIA

SHORT TERM DEBENTURES ISSUED TO YIELD 5½%

1913.

Real estate boom collapsed. Hard times.

Provincial Government debentures sold as low as a rate to yield 4.40 per cent.

Large cities and counties at 5¾ per cent. to 5 per cent. (Counties selling at about 5½ per cent., city of Toronto at about 5¼ to 5 per cent.).

Large towns and townships from 6½ to 6 per cent.

Village bonds from 6¾ to 6½ per cent.

1914.

August 1st.—The commencement of the great war. German rush for Paris.

About March to May, 1914, the prices for debentures ranged as follows:—.

Provincial Government debentures, 4⅜ per cent. to 4¼ per cent.

City of Toronto, 4¾ per cent to 4⅝ per cent.

Ontario counties, 4⅞ per cent. to 4¾ per cent.

Large Ontario towns and townships, 5¼ per cent. to 5 per cent.

Ontario village bonds, 5½ per cent. to 5⅜ per cent.

Western city bonds, such as Calgary, Edmonton and Regina, 5⅜ per cent. to 5¼ per cent.

Smaller western towns sold from 6 per cent. to 5¾ per cent., and smaller places still from 6¼ to 6 per cent.

School districts and western villages from 7¼ per cent. to 7 per cent.

1915.

Great war and deadlock on west front. German advance against Russia.

From March to about May last year, prices reached their highest level or lowest yield rate. At this time, Ontario provincial bonds were selling to yield about 4.80 per cent.

City of Toronto, 4.95 per cent.

Ontario counties, 5 per cent.

Moderate Ontario cities, 5¼ per cent. to 5⅛ per cent.

Large Ontario towns and townships, 5⅜ per cent. to 5¼ per cent.

Ontario village bonds, 5⅝ per cent. to 5½ per cent.

Western city bonds (Calgary, Edmonton, Regina, etc.), about 6 per cent.

Smaller western towns, 6¼ per cent. to 7 per cent.

School districts and western villages, 7¼ per cent. to 7 per cent.

However, it was not long until these prices were materially changed, so that in the fall of the year the prices were about as follows:—

Provincial Government bonds (such as Ontario), 5¼ per cent. to 5⅛ per cent.

City of Toronto, 5⅜ per cent.

Small Ontario cities, 5⅝ per cent.

Good Ontario towns, 5¾ per cent.

Western cities (such as Saskatoon, Calgary, Edmonton), 6¼ per cent.

School districts, 7½ per cent.

Villages, 8 per cent.

1916.

Supply of municipals limited; demand from a new market, the United States, large. After marketing of war loan in the fall, prices stiffened.

Dominion government bonds yielding	**5¼%**	**to 5⅛%**
Province of Ontario bonds yielding	**4.80%**

UNITED STATES LOANS TO ALLIES

More Than $3,883,000,000 Advanced Since Republic Entered War

The total advances made to the Allies by the United States since that country entered the war in April, 1917, were, up to December 10th last, approximately $3,883,900,000. The following figures show the countries to which the loans were made, but up to November last only: Great Britain, $1,860,000,000; France, $820,000,000; Italy, $500,000,000; Russia, $325,000,000; Belgium, $58,400,000; Serbia, $3,000,000; total, $3,556,500,000.

As stated previously, by December 10th, this total had been increased to $3,883,900,000 and is still appreciating at the rate of about $500,000,000 monthly.

Before these loans were advanced, and prior to its entry in the war, the United States had already loaned $2,213,575,000 to belligerents. That makes a grand total of loans by the United States to belligerents, since the war started, of $6,097,475,000. A loan of $100,000,000 was made to Canada in July last by bankers of the United States.

Three Large Credits Last Fall.

The credit of $230,000,000 granted to Italy on October 30th, 1917, followed the military crisis in that country precipitated by the German invasion of Venetia. This credit was utilized in the purchase of coal, foodstuffs, munitions and other necessary supplies. The credit of $435,000,000, made to Great Britain on November 1st, was to cover British expenditures in the United States up to January 1, 1918. This brought the total loans to Great Britain to $1,860,000,000 and total loans to the Allies to $3,566,400,000. The credit of November 1st was the largest ever made to an allied government. The money will be withdrawn from the treasury only as needed to pay for war contracts. Another large credit was that of $310,000,000 in November to France to cover a period up to January 1, 1918.

Britain and United States.

Lord Northcliffe, according to cable dispatches received in November, was reported as saying that the people of the United States must remember that "at the moment we (England) are financing the Allies to a greater extent than you are—a fact little known in the United States." Figures then at hand show that England has, since the war began, loaned $7,123,000,000 to its allies, including $777,000,000 to its own Dominions. The total advanced since April was $1,414,000,000. Some of this, however, was advanced to neutrals, as it is believed that England advanced money to Denmark and to Greece before the latter entered the war.

The United States, during the first seven months after it entered the war, advanced a total of $3,861,400,000 to its allies. This is less than England's total, but it is almost 55 per cent. of the advances made by England in three years and three months of war, and it was made in less than one-fifth the time. Of the United States total, England got $1,860,000,000, France $1,130,000,000, Italy $485,000,000, Russia $325,000,000, Belgium $58,400,000 and Serbia $3,000,000. The United States advances will, in a short time, actually exceed those of England if they continue to make loans at the present rate, which Secretary McAdoo stated at Baltimore to be $500,000,000 monthly.

Rate of Interest.

Of the $3,324,129,750 loans actually made to the Allies by the United States government out of a total of $3,883,900,000 credits extended up to about December 10th last, approximately $1,100,000,000 has been loaned at the rate of 4¼ per cent. per annum. About $2,200,000,000 was loaned at rates varying from 3 to 3½ per cent. per annum.

For a few months following the entrance of the United States into the war, the allied governments were obtaining accommodation at the same rate of interest as the United States government borrowed funds from the American people. The bond issue act of April 24, providing for the first Liberty Loan expressly stipulated that the loans made to the Allies should bear the same rate as the public issue. Under the terms of the act of September 24, the second bond issue measure, the loans made to the Allies were "to bear such rate or rates of interest as might from time to time be determined by the secretary of the treasury."

INSURANCE

Why take the Bigger Risk?

In the event of defalcation on the part of an employee, your business is presumably protected from serious embarrassment by a guarantee bond. As a sound business man you have no doubt attended to that.

But is your business protected against possible financial embarrassment due to the death of a partner, with the consequent necessity of paying to his widow the amount of his interest, and other financial strains to which the business would be subjected?

The possibility of loss in this manner is much more serious. Why not have protection against it also?

For information as to how this can be done, address the nearest office of the

How Much Business Should a Company Write

Methods Suggested for Gauging Amount of New Business—To What Extent Should Loading Be Regarded In Fixing Reasonable Expenditure?—Expense Rate is the Main But Not the Only Factor—Participating and Non-Participating Business

By M. P. LANGSTAFF, A.I.A., F.A.S.

HOW much new business should an insurance company write? I think insurance managers are agreed that this is one of the most important, and at the same time, one of the most difficult, questions with which they have to contend. It is a question, moreover, that cannot be decided by any fixed rules applicable to all or various companies—although broad boundary lines may be fixed—but rather is one which each company must decide for itself after a consideration of the many factors which govern its own particular case. Mr. Miles M. Dawson, F.I.A., states: "The problem of demonstrating the measure of profitable expenditure for new business in life insurance has tacitly been treated as hopeless, by nearly all actuaries," and Mr. T. E. Young, F.I.A. agrees with this dictum when he says it is "impracticable to indicate any definite proposition as the controlling criterion of the appropriate area of business."

The matter is, therefore, one largely for individual judgment. A too conservative course may prevent the inclusion of the proper proportion of new "blood" necessary for a favorable mortality experience, may hamper the agents of the company in the full scope of their endeavors, may keep the institution a "picayune" concern, may injure the company's reputation for proper progressiveness with both agents and the public, and may prevent its proper diffusion of that goodly product of beneficence—life insurance. Too ambitious a course, on the other hand, may lead to acceptance of sub-standard risks, too high an expense rate, reduction of surpluses paid to policyholders, and even serious impairment of capital. As in everything else in life, the happy mean seems to be the desired end, a course not too conservative and not too progressive—a course that will preserve the continuity of the surplus returns, build up the company's reserves and surplus, give a regular progression in all departments, and put no hampering restraints on the indispensable fieldman.

Happy Mean for Each Company.

But there may be a wide divergence between conservative and progressive policies and the difficulty is to find that happy mean for each particular company. "Conservative" and "progressive" are pretty general terms, and are defined very differently and have very different significance according to the temperament of the management. Like the terms investor, speculator and gambler, they frequently overlap and merge into one another. The speculator invariably considers himself an investor—somewhat liberally inclined; the gambler rates himself as a cautious speculator—taking an occasional "fling." However, I am not arguing in favor of either conservativeness or progressiveness, but rather the proper combination of the two. Business is like sport. The impetuous dashing player makes brilliant shots, "brings down the gallery" again and again, but he loses almost invariably to the man who keeps his head, avoids sensationalism, and utilizes all his skill.

In this connection Mr. T. E. Young says: "In no commercial undertaking is the principle of commensurate profit forming the criterion of the scale of expenditure so vital and far-reaching as in life assurance by reason of the lengthened duration of its contracts, nor are the consequences, in any sphere of industry, of an ill-advised procedure in this respect more deeply fraught with important and, it may prove, permanent influence upon future stability and success than in the administration of these special business trusts. A poorly equipped actuary of impoverished capacity can readily command a plethora of business if he is prepared (neglectful of the effect upon profits) to subordinate the future to the present. It demands a man of strength of character as well as competence of financial skill and training to forecast the future and weigh the tendency of actions of this kind beyond the boundary of the immediate and proximate period as to restrain judiciously and severely the lavish hand. For our natural desires, even apart from personal reputation, are in favor universally of extensive augmentations and surprising results, and, as we have just observed, it requires fortitude of character equally with clear and steadfast survey over the distant future to remain contented with acquisitions of minor extent though involving a more profoundly auspicious influence upon the prospects of solidity and profit. In this restraint and skill reside the stable and permanent conditions of continued success. An extensive new business constitutes in no degree in itself an index to wisdom of administration or prosperity of result."

Gauging Amount of New Business.

Various attempts have been made to arrive at a general formula for the maximum amount of expenditure that may be made for new business. For example, Mr. Dawson in a paper before the International Congress in 1909, gives the following general formula for new participating business:—

$$L^{oo} F_x = P'_x a_{(x)} - (A'_{(x)} + e'_{(x)} + V_{(x)} + g P_x a'_{(x)} + B'_{(x)})$$

Where $L^{oo} F'_x$ is the symbol for the measure of profitable cost of new business; $P'_x a'_{(x)}$ the present value of the gross premiums allowing for actual rates of interest, survival and persistence; $A'_{(x)}$ the present value of the insurance benefits to be paid; $e'_{(x)}$ the present value of the expenses; $V'_{(x)}$ the present value of the sums to be allowed upon surrender; $g P'_x a_{(x)}$ the present value of the annual profit desired per annual premium P'_x; and $B_{(x)}$ the present value of the bonus or dividend desired.

Mr. Dawson points out that the problem is independent of the method of computing reserves, and that the use of a method of valuation which seems to set free a larger amount for cost of new business, than correctly computed, is likely to be misleading and dangerous.

Several of the States, for example, have provided for minimum reserve laws for the purpose of meeting the excessive cost of new business without giving any consideration to the maximum amount which should be allowed, as indicated by the above-mentioned formula.

Excessive Cost of Business.

During the investigation into the management of the New York companies in 1906 and also during that, into the affairs of the Canadian companies in 1909, the matter of the excessive cost of new business, received considerable attention. The New York legislators fixed on the select and ultimate method of valuation as suggested by Mr. Dawson which allows the benefit of mortality selection during the first five years to be utilized in meeting the cost of new business.

The Canadian act allows for this excess cost by a lowered basis of valuation in the early years as follows, the object being to relieve the pressure on the younger companies:—

"In the case of any policy, the net annual premium upon which is not less than the corresponding net annual premium for a whole life insurance with uniform premiums throughout life, the difference between the said whole life premium and the corresponding net premium for a one-year term insurance shall constitute the amount to be deducted in respect of such policy at the date of its issue, such difference, however, to be diminished each year by an equal proportion, so that upon payment of the fifth annual premium, the value of the policy" shall be in accordance with the regular reserve standard.

In its endeavor to restrict too excessive competition for new business with its accompanying high expense the New York law sets a limitation on the amount of new business that shall be written and also on the amount of expense allowable. The clause providing for limitation of expenses reads:—

"No domestic life insurance corporation shall in any calendar year, after the year nineteen hundred and six, expend or become liable for, including any and all amounts which person, firm or corporation is permitted to expend on its behalf or under any agreement with it (1) for commissions on first year's premiums, (2) for compensation, not paid by commission, for services in obtaining new insurance exclusive of salaries paid in good faith for agency subdivision either at the home office or at branch offices, (3) for medical examinations and inspections of proposed risks, and (4) for advances to agents, a total amount exceeding in the aggregate (a) the loadings upon the premiums for the first year of insurance received in said calendar year, (calculated on the basis of the American experience table of mortality with interest at the rate of three and one-half per centum per annum), and (b) the present values of the assumed mortality gains for the first five years of insurance on the policies in force at the end of said calendar year on which the first premium, or instalment thereof, has been received during said calendar year, as ascertained by the select and ultimate method of valuation as provided in section eighty-four of this chapter; and (c) on policies issued and terminated in said calendar year the full gross premiums received, less the net cost of the insurance for the time the insurance was in force, computed by the American experience select and ultimate table, three and one-half per centum. No such corporation shall make or incur any expense or permit any expense to be made or incurred upon its behalf or under any agreement with it, except actual investment expenses (not exceeding one-fourth of one per centum of the mean invested assets), and also except taxes on real estate and other outlays exclusively in connection with real estate, in excess of the aggregate amount of the actual loadings upon premiums received in said year calculated according to the standards adopted by the company under section eighty-four of this chapter, and the present values of the assumed mortality gains hereinbefore mentioned."

Limitation of Expenses.

The Canadian legislators did not think it advisable to follow the New York law in respect to limitation of expenses, but, rather, deemed that this matter could best be left to the judgment of the companies' managers who are forced, by the keen competition to show best actual results, to keep expense rates to moderate proportions. It is a question, indeed, to what extent loading should be regarded in fixing reasonable expenditure. Mr. Papps in his evidence before the Royal Commission, said:—

"But the point is this; if we measure the expenses by the total loading we have to consider two or three points. One point is that young companies cannot get their business in so that the total expenses will be less than the total loadings, owing to the fact that a very large percentage of their business is new business. In the same way an old company rapidly pushing for business may have difficulty in complying with that. They may just succeed whereas another company writing a very much similar volume of new business will have no difficulty whatever. At the same time there is this question; if that company is able to write double the volume of new business without increasing the rate of expense at which that business is obtained, is there any reason why that company should not take all the business it can at that rate of expense, provided only that in keeping track of accounts the expense attaching to the securing of that new business should go solely against those new classes. So that it really resolves itself into this, if the company is getting its business at a proper rate, it does not matter how much new business it should take, provided they have sufficient funds to stand against the temporary impairment of the reserve."

Department Specialization Necessary.

Years ago it was the prevalent opinion that the more business written, the larger would be the profits, and possibly with the low cost then of procuring business, this opinion was not far wrong. But conditions now are radically different. The enormous increase in the cost of living has raised commissions and other expenses for new business in a far greater ratio than premiums have been raised. Liberalized policy contracts, too, call for high surrender values and thus leave little or no profit from lapses. The result has been that there is a point beyond which a company should not go in its rush for new business—i.e., beyond the point where extra exertion for new business beyond the normal requirements bears too heavily on the future. The conduct of an insurance office, if from this reason alone, is a matter, then, calling for much greater skill and acumen than in those days when life insurance was in its childhood. Specialization in the various departments of the business aiming at the utmost efficiency and the utmost economy consistent therewith must be the desideratum. The chief executive must be a man, who not only is himself capable of fulfilling any of the multifarious duties of the various departments, but still more one who can build up an organization in his home office that will perform in the various departments all the ordinary duties in an efficient manner. In the present-day, rapidly growing companies with their many complexing problems, the various executive heads would be of little real service did they hamper their executive capacity of attention to minute details which could best be left to well-trained assistants.

From the standpoint of new business the agency department is of course all important and an office possessing a really "live" expert superintendent of agencies is fortunate.

Qualifications of Superintendent.

I take it that the qualifications of a superintendent of agencies must be: Firstly, a knowledge of men. Secondly, he must be able to attract the best men as salesmen and be able to hold them by his personality as well as by his arguments. Thirdly, he must have an intimate knowledge of his business, knowing the methods and practices of his own and other companies as regards policies, rates, agency contracts and so forth. Fourthly, he must know the conditions of insurance field work as applies to his own company. He must know what kind of a contract is necessary for the best results in the various districts. The superintendent who is always clamoring for the widest form of contract in order to hold his men together, may, in reality, be admitting his own incompetence. A company in good standing can always obtain a goodly share of business without issuing extravagant contracts to its agents.

The post of superintendent of agencies, is, then, one of the utmost importance. All new business that comes to the company, comes from the men whom he has appointed as the company's representatives; and according to the quality of the company's representatives will the company's business be. If they hold a high reputation in their communities, the company in those communities will hold a high reputation and its business in those communities will be of the highest quality whatever the quantity may be. And new business is of little use unless it is well selected and of permanent nature.

Work of Actuarial Department.

For the procuring of new business the actuarial department stands shoulder to shoulder with the agency department. Much of the success of the business depends on the hearty, efficient co-operation of these two departments. The actuarial department must draw up the policy contract and decide on the rates and guarantees. An attractive policy form, with well-worded and clear provisions and privileges and liberal values, etc., goes a long way in helping the fieldman close his business.

The actuary should know, however, where to draw the line in liberality. Too liberal surrender values, for instance, while bringing about a certain immediate increase in a company's normal business, might prove a serious menace to its future prosperity.

The agent of the present day is beset on every side by the difficulties his competitors set in his way, by offering higher guarantees, varying forms of contracts, special policy privileges and so forth. It is the duty of the actuarial department to come to the rescue of the agent in matters of such perplexity, to show him not so much any weaknesses in the offers of his competitors as the advantages of his own company's contract by way of its special provisions, or guarantees, or profits, or otherwise. The "man on the street" in these days usually demands facts and figures. The actuarial department must therefore be ready to supply their representative with the best and most up-to-date of these in a form readily intelligible to the prospect and arranged in such a way as to make the strongest appeal to him. The average agent, like the average prospect, is not a mathematician or an actuary, and a mass of figures relative to some actual result or to the company's standing, arranged in complicated form, may prove so confusing as to do more harm than good. The actuary, then, in co-operating with the field men, must, to be of real assistance to them, be able to unravel the technical kinks in his own mind for the time being and put out all his data in a form both interesting and intelligible to the layman.

The actuary, moreover, must be alive to and ready to grasp any new ideas arising in the business. For example, the disability privilege allowed by the insurance act of 1910. was promptly taken advantage of by some companies and used as a lever in getting much new business before the majority of the companies had even thought of including it in their contracts.

General Rules for New Business.

To return to the question of how much new business a company should write, let us endeavor to fix some general rules which may serve as a guide:—

(1) It is impossible to fix the amount of new business as a percentage of the business in force and apply that figure rigidly to all companies.

For example, it has often been stated that an established company can properly write a new business equal to about 20 per cent. of its total insurance in force. This rule might be roughly applicable to the average Canadian company at the present time, there being so many of them of approximately the same size and rate of progression. The following figures, however, will indicate that the percentage is low for the younger companies and high for the older ones:—

Company began business.	New business written 1916 Old business in force 1915. %
1849	12.75
1865	16.62
1869	15.46
1871	15.51
1879	18.12
1887	16.29
1889	22.96
1889	23.84
1893	21.41
1894	24.80
1897	21.46
1899	23.70
1900	37.60
1904	35.00

Case of Young Company.

It is obvious that a comparatively young company may find it necessary to write a considerable volume in proportion to its old business each year for a number of years in order to build up its renewal premium income.

It is a difficult matter indeed to say what amount of the resources of a young company should be used in the development of its business, as it has no general trend of expense in the past to serve as a guide, and to reduce if possible. Its business is in a state of flux, the expenses of its various agencies and departments changing rapidly from time to time, and it requires patience, good luck, time and considerable business judgment before cosmos is brought out of this chaos.

Where a company has become thoroughly established, then, new business should be such that:—

(2) Dividends paid should conform favorably with those of other companies.

This, of course, depends upon other factors than the amount of new business written. Yet the new business of a company which affects its expense rate so markedly, is one of the most important considerations. Endeavor should be made to see that each year finds a gradual reduction in its ratio of expenses to income. The expense rate may in this way be regarded as an index to the proper amount of new business to write.

(3) Dividends from year to year should be uniform or show gradual increases over the previous year's scale.

Expense Rate not Only Factor.

Although the expense rate is the main factor to study in respect to proper amount of new business to write, it would be foolish to consider it the only factor. Surely a company maintaining a high interest rate and a low mortality rate can afford to use some of these gains in the acquirement of profitable new business and increasing the company's prestige due thereto. Size is most desirable so long as it is not at the expense of strength. It reduces the ratio of overhead expense, attracts both the public and the ambitious agent, and gives a company greatly enhanced prestige on every hand. Very few of the large companies have grown large at the sacrifice of strength. Their financial reports and dividend payments prove otherwise, and a careful study of their methods of rapid progression will repay study to the too conservative manager. A study of the large companies will show that bigness in life insurance is almost always allied with strength. It is rare, indeed, that a directorate that have the brains and energy to build up a tremendous business, haven't the faculties to do so at a reasonable expense and with a retention of a large percentage of the amount written which rapidly becomes self-supporting and profitable.

(4) From what has been said above it will appear that the problem of new business should not be approached from the standpoint of expense alone, but rather from that of surplus. The surplus earned on the ledger assets is one of the most important ratios connected with the company as it focalizes into one significant figure the results of all the important earnings of the company from expense, mortality, interest and miscellaneous savings. New business written, then, should be of such quantity and quality as to lead to the maintenance in the value of this ratio, and its gradual increase, if possible, so that dividends to policyholders may not only be maintained and increased, but also the contingent or free surplus gradually increased to the benefit of the company's financial position.

Matter of Wise Expenses.

(5) Eliminate "penny-wise, pound-foolish" policy. It is possible to hold a quarter so close to the eye that it shuts out the view of the heavens. It is possible to watch minor expenditures so closely that one is oblivious to broader considerations. In scanning expenses for new business, surely a management should study whether those expenses are of a productive or unproductive nature and should not have a tendency to regard all expenses in the same category, to be pared down to the lowest possible cent. An expenditure that will ultimately result in a profitable new business is an investment of the company's funds, even though it may show no immediate return. Reasonable and judicious advertising, for example, must bring returns by way of new business, even though its effects cannot be accurately reckoned.

In working on the company's expense rate there are two factors to be used, the expense and the income, the numerator and the denominator. While the rate can be reduced by lowering the gross expenses, the numerator, it can also be reduced by increasing the income, the denominator. Possibly it takes greater skill to bring the latter up to correct proportions than it does to keep the former within due limits. Do not keep your eye on the numerator alone.

Present Results and Future.

(6) An eye to the future. Too much stress should not, of course, be put on present results, but a vigilant eye should be kept for the future welfare of the company. An insurance company is "not for an age but for all time." Were the present only to be regarded then a total cessation of new business would bring about the best results, as in that way a company's expense rate would drop rapidly and its surplus bound upwards. However, without the new business it would soon be in a moribund condition. New business is essential to the life of the company as a growing concern and it is the problem of the management to strike the happy mean between no new business at all and too great an access thereof. Having an eye to the future, it would seem that the quality of the business is of prime importance, firstly with regard to medical selection of the newly-examined lives, where it has been said: "This side of the management of a life insurance company is of the first importance. A half million dollars in the death claims for one year in one of the largest companies may be saved by the application of wisely directed attention with far greater ease than one hundred thousand dollars can be saved in expenses." Secondly, with regard to the permanency of the business. A company can afford to write a much larger proportion of new business if that business is of substantial character than would be the case if each access of new business were followed by a heavy lapse and not taken and surrender rate in respect thereto. In the former case, the business would soon pay its own way and contribute to the reduction in the gross expense rate; in the latter case, the business would participate in the raising of the expense rate without exerting sufficient compensating influence thereafter.

(7) How it is obtained. The volume should be influenced to some extent by the nature of the commissions granted. A company paying a heavy first-year commission and low renewals could not afford to write the amount it could write

were the cost spread more over the duration of the policy. There seems to be a tendency with well-established companies to work towards this end—to reduce substantially first-year commissions and give higher rates to the agent during the early renewals. A young company in this respect works under heavy handicaps in its early years. It has a comparatively small renewal business to compensate its salesmen for taking a small first-year commission. It has, too, as yet, failed to obtain the reputation with the public so essential for widespread success.

Consequently, to attract the best men as its salesmen, it must pay a heavy first-year commission, which throws a heavy strain on its successful progress. The path of a young company is certainly not paved with roses. Was Mr. Ferguson not justified in his paper before the Life Underwriters' Association annual convention last August, in his representation of the poor outlook for shareholders of these companies?

Nature of Business.

(8) The nature of the business. The quantity of business to be written certainly depends too on the distribution of the plans, ages and methods of surplus distribution. Certainly the high premiums of the endowments or of old lives on any of the plans can bear the strain in the early years with far greater ease than the low premiums on life and term policies. Again, a company doing a large proportion of deferred dividend business can afford to write more new business than would be the case were it paying out all its earnings in annual dividends, or as would appear to be the case with some companies, paying arbitrary unearned annual dividends in the early years. A company, too, that has been conservative in its dividend payments and has been accumulating a substantial contingency reserve would be in a position to aim at liberal expansion of business, without danger of disturbing its dividend scale, since such contingency reserve could to some extent be utilized to meet the costs of any super-normal production.

(9) Regularity. One test of strength in an insurance company is the showing of regular and substantial improvements in all departments of the business, not spasmodic irregular growth. A company should, then, aim year by year at a new business which will show gradual increases over the new business of each preceding year. It would obviously affect the continuity of surplus results, if violent efforts were made at irregular intervals to obtain new business without regard to what the company had been doing in the past or could expect to do in the future.

(10) Participating and non-participating. During the last few years great care has been employed by the companies in keeping their participating and non-participating accounts separate, so that each section may be charged and credited with its true expenditure and true revenue respectively.

How much of the profit on non-participating business may be used in the acquisition of new business is a point to be settled by the company's directors after a consideration of the amounts of dividends required for stockholders. In fairness to the participating branch, however, an amount should be expended therefor which shall bear at least an equal proportion to the amount expended in the participating branch for the purpose, that the non-participating fund bears to the participating fund.

Nature of Participating Business.

In considering how much of the participating profit should be expended for new business, we must bear in mind the nature of participating business. In the early days of life insurance, premiums were based on insufficient and inadequate data, and for the sake of safety put far in excess of actual requirements. To compensate participating policyholders for their excess payments, returns were made to them by way of surplus distributions. They, in a sense, therefore, received these distributions of bonuses in return for guaranteeing the safety of the company. The same principle exists at the present day, although to a much less degree owing to the more scientific mortality tables now in use. Still it seems clear that the participating policyholder expects to and should obtain, in addition to his insurance, something more than his overpayment with interest. The responsibility would seem to be on the management, therefore, to see that any part of the participating policy-holders' overpayments and profits expended in new business should be expended therein in such a way and to such an extent that proper returns therefrom are assured to the participating policyholders within reasonable time. In other words, the participating loading cannot be looked upon as an additional "expense fund" to be thrown haphazardly after new business without due thought of returns, but as a "trust" fund which must be used with the utmost care and discretion. However, the question might be asked: "Have not the companies as much right to spend arbitrary, unearned amounts in building up the business as they have to pay arbitrary, unearned dividends to policyholders in the initial policy years?"

But, as a matter of fact, do not many of the companies regard such payments of dividends in the light of indirect expenditures for new business, rather than actual bona fide dividends?

In this connection we may point out that there is a radical difference of opinion among actuaries as to the equity of charging the cost of new business partially against old policyholders in the assessment of expenses for the purpose of arriving at the surplus allotments. One view held is, that, whatever the cost of new busines may be, its value is mainly to those insuring or to their beneficiaries, not to those previously insured. As Zartman says: "A new entrant cannot in fairness ask that the special expense involved in bringing the benefits of the company to him should be shared by the existing membership on the plea that his incoming broadens the field, when the existing membership constitute the field to which he only adds his mite; when the benefits to him from the existence of such a membership are a hundred thousand times any benefit he can confer upon them. It is certainly sufficient that he be admitted to the common advantages of a more stable experience and a decreased expense ratio, if such result, without requiring that others be taxed to pay the cost of giving him these advantages. The assessing upon the old business of the expense procuring new business cannot then be justified either upon the ground that the expense is due to, or is for the benefit of, the old business."

Judgment of Own Experience.

Other writers on the other hand, point out that the new entrants being newly-examined lives tend greatly to reduce the average mortality experienced by the company; that the weight of the expenditure of new business is not due to voluntary action of the fresh entrants, but to the efforts of the company acting in the presumed interests of its existent members, and if those members consider the business to be worth acquiring upon the terms that prevail, they should share fully in the general burden of the cost.

To sum up, it seems to me, bearing in mind the main principles outlined above, that a company that has been in existence for a few years, can determine sensibly and for all practical purposes the amounts it should expend in the acquisition of new business. It has then its own experience upon which to base a judgment, and this, together with a careful study of its annual statement and gain and loss exhibit, should be of more service than any amount of theoretical reasoning. By tabulating each year the figures relating to the company's growth and surplus earnings, and watching the effect of one upon the other, it should not be a matter of extreme difficulty to fix limits between which the expenditures for new business should fall.

TORONTO'S SOLDIERS' INSURANCE

The amounts which Toronto city paid out on account of soldiers' insurance up to September 20th, 1917, are as follow:—

Paid by city directly, prior to 1917, $398,000; during 1917, $1,003,000; paid to companies as premiums previous to 1917, $741,038; premiums during 1917, $105,685; total cost to city, $2,247,723. This large sum, practically two and one-quarter millions of dollars, will be largely increased before the end of the year. Here are the details in connection with soldiers' insurance to date:—

Premiums paid to companies during 1917: Metropolitan Life, $63,643; Aetna Life, $42,042.

Premiums paid to companies previous to 1917: Metropolitan Life, $610,884; Aetna Life, $91,646; State Life, $38,506.

Claims paid during 1917: Metropolitan Life, 195, $195,000; Aetna Life, 55, $55,000; State Life, 15, $15,000; City of Toronto, 1,003, $1,003,000.

Claims paid previous to 1917: Metropolitan Life, 538, $538,000; Aetna Life, 58, $58,000; State Life, 4, $4,000; City of Toronto, 398, $398,000.

FIRE UNDERWRITING RESULTS

With Canada's Development Risks Have Largely Increased and Total $3,720,058,236

Less than $2,000,000 was the first year's fire insurance premiums in Canada, of which there is a government record. Total premiums collected by 87 companies during 1916 were $27,783,852, and losses paid $15,114,063, the loss ratio being 54.40 as compared with 53.49 in 1915, and is 6.00 below the average for the forty-eight years. In the decade 1896-1906 the average annual loss paid by the companies transacting business in Canada was $6,000,000, a sum which was nearly doubled in the past decade, 1907-1916, for the average loss then recorded was $11,700,000.

British companies have received more than 50 per cent. of the premiums collected in Canada and paid more than 50 per cent. of the losses during the 48 years recorded. The aggregate totals of the fire insurance business in Canada are as follows:—

Companies	Premiums.	Losses.	Ratio %.
British	$267,308,817	$163,371,003	61.12
Canadian	96,048,484	59,795,734	62.26
United States and other	87,382,969	49,075,208	56.16
	$450,739,560	$272,241,945	

The expansion in fire underwriting in Canada during the last 26 years of the period is shown in the following figures:—

Companies.	Premiums. 1890.	Premiums. 1916.
Canadian	$ 1,249,884	$ 4,817,876
British	4,072,133	14,294,803
United States	514,054	8,671,173

Companies.	Risks. 1890.	Risks. 1916.
Canadian	$135,145,294	$ 742,805,919
British	427,931,692	1,606,346,835
United States	57,646,959	1,069,085,926

The rate per cent. of premiums charged upon risks taken is shown in the following table:—

Companies.	Gross amount of risks taken during the year.	Premiums charged thereon.	Rate of premiums charged per cent. of risks taken.
British	$1,606,346,835	$17,278,033	1.08
United States and other	1,069,085,926	11,146,042	1.04
Canadian	742,805,919	8,807,615	1.19

The increase in the amounts taken in 1916 as compared with the previous year by Canadian companies is $69,561,788. For British companies there is an increase of $168,309,114, and for United States and other companies there is an increase of $68,814,875.

LIFE UNDERWRITING RESULTS

The field men of forty-four life insurance companies, Canadian, British and Colonial, and those of the United States, were actively engaged last year in converting Canadian "prospects" into "policyholders." The results of their work in 1916 is compared with that of the pioneers of 1875 in the following figures which give the amount of insurance effected during the respective years:—

	1875.	1916.
Canadian	$ 5,077,601	$138,201,281
British and Colonial	1,689,833	5,250,633
United States	8,306,824	87,649,711
	$15,074,258	$231,101,625

The 1916 work of the agents brought the net amount in force from $1,311,616,677 of 1915 to $1,422,179,632.

Lapsation is a problem for the underwriters, its causes are often discussed, remedies noted and sometimes tried, but the disease persists, to the extent of $104,172,247, as shown in the surrender and lapse column of the Canadian government return. This, however, was a decrease of about $32,000,000, compared with the preceding return.

Premiums collected from policyholders in 1916 totalled $48,093,105, while payments made to policyholders were $35,685,560.

The year's income and expenditure of Canadian insurance companies can be placed as in the following columns:—

Income:	
Premiums and annuity sales	$43,958,826
Interest, dividends, rents	16,004,312
Sundry	287,869
	$60,251,007
Expenditure:	
Paid to policyholders and annuitants	$24,147,117
General expenses	11,574,054
Taxes	679,429
Dividends to stockholders	510,815
	$36,911,417

The following table shows the assets of Canadian, British and United States companies in Canada:—

	Canadian.	British.	United States.
Real estate	$ 15,052,552	$ 968,794	$ 79,840
Loans on real estate	95,921,380	16,942,175	11,087,153
Loans on collaterals	2,501,710	156,942	....
Cash loans and premium obligations on policies in force	41,134,377	2,655,840	10,777,910
Bonds and debentures	108,353,964	15,998,790	55,146,616
Stocks	17,332,464	160	....
Cash	3,678,528	788,602	2,537,267
Interest and rents due and accrued	7,191,936	432,307	1,151,210
Outstanding and deferred premiums	6,611,938	344,214	1,352,316
Other assets	299,405	18,039	9,844
	$298,078,258	$38,305,866	$82,142,159

LIFE COMPANIES AND WAR MORTALITY

That life insurance companies in Canada were affected by war mortality to a much greater extent than previously is shown in the annual report of the superintendent of insurance, issued last fall. Up to the end of 1916, Canadian life companies and fraternals, Dominion and provincially licensed, had incurred $7,139,541 claims arising out of the war. In addition, Canadian companies had incurred war claims under policies held by British and foreign policyholders to an amount of $524,935. The insurance department at Ottawa states that returns have been secured from all companies and societies with the exception of a few small provincial fraternals, the returns from which would not materially affect the figures shown. Information was asked for as to claims incurred under the following headings:—

(a) Enlisted soldiers killed in action or dying from wounds.

(b) Enlisted soldiers dying from other cause.

(c) Other persons engaged in war service, or civilians dying as a result of military operations.

The returns made show the following results:—

	Dominion licensees.	Provincial licensees.
1914.		
(a)	$ 15,793	$ 1,000
(b)	1,622	1,000
(c)	......	......
	$ 17,415	$ 2,000
1915.		
(a)	$1,607,342	$114,746
(b)	190,684	18,500
(c)	141,709	7,585
	$1,939,735	$140,831
1916.		
(a)	$4,318,839	$426,711
(b)	226,987	50,411
(c)	15,112	1,500
	$4,560,938	$478,622
Total	$6,518,088	$621,453

Life Insurance As Sold by the Regular Companies

Why They Are Able To Increase Their Business at a Remarkable Rate While the Assessment Societies Are Losing Ground—New Features in Modern Policies Cannot Be Given by the Assessment System—An Instructive Analysis and Some Interesting Examples

By W. H. ORR

EVERYBODY knows that life insurance has been in operation, as a business, for a great many years past, in Europe, in the United States, in Canada and in other countries. Of late years, a strong effort has been made, by means of fraternal societies, to give the public all the benefits of what is called "whole life" insurance at a much lower cost than it is afforded by what may be termed the "regular" system, as practised by the life insurance companies, in this and other lands.

The object of this article is to call attention to, and briefly explain, the different methods of operation and the widely different results, of the two systems—the permanent and the evanescent—in contrast with each other.

Plan has been Time Tested.

The regular, or old-fashioned plan, so successfully followed by the regular companies, recognizes the fact that, though the insured party *may* drop out, either by lapse or by death, at an early date, yet provision must be made for the payment of the full sum insured at death, whether that be early or late in life. In other words, the last man to die, of all those insured in the company, must have provision made for his widow and children, just as faithfully and surely as those of the first or earlier deaths. This is made a certainty by a premium per $1,000 being charged—whether paid yearly, half-yearly or quarterly—which has in it a small sum, or portion, which being accumulated at compound interest, will provide $1,000 for the wife and children of the last man to die, just as surely as for those of the first man who drops out by death. In other words, all regular societies doing life insurance business, are compelled by the laws of the countries in which they operate, as well as by the law of commonsense, to provide a scientific re-insurance fund. That re-insurance fund must be sufficient to pay another company for taking over its contracts and carrying them out to the last item of liability, assuming that anything should happen to the original company to put it out of business. Suppose, for instance, that any company should desire to close its business in any country or state, after operating therein for many years: it must leave in the hands of the government of that country or state, or pay to another solvent company, a sum sufficient to re-insure all its contracts in another company.

Provides for Total Indebtedness.

For instance, if either one of the following five well-known Canadian companies should decide to retire from the business of furnishing life insurance, it would have to hand over to some company approved by the government, the large sum set forth in the last column of the following table, that being found, according to the latest blue-book, to be sufficient to provide for its total indebtedness, as that indebtedness stood on December 31st, 1916:—

Company.	Ins. in force.	Assets.	Liabilities.
Sun Life	$281,434,700	$ 82,948,996	$ 74,089,130
Canada Life	165,366,127	59,264,183	52,245,329
Manufacturers'	87,527,995	28,971,253	19,866,600
Confederation	74,750,841	21,559,159	19,097,788
North American	58,486,367	16,485,987	13,768,881
Totals	$667,566,030	$209,229,579	$179,067,728

About one-half the amounts mentioned in the first and third columns is on account of policies payable at death only, and the other half represents endowments, which are payable either at death, or to the insured himself if he lives the ten, fifteen or more years constituting the endowment period for which the insurance contract was made.

Having now set forth the permanent basis upon which the business of the regular companies rests, the reader will desire to know how successfully that business has been carried on in Canada, during a period of 40 years past, and how much more rapidly in recent years, than formerly, has been its growth. The field in Canada has been cultivated by foreign as well as native companies, and all alike have prospered of late years. From the latest insurance blue-book from Ottawa, we take the following figures:—

Year of record.	One year's new ins. taken.	Total ins. in force.	Increase in ten years.
1876 ...	$ 13,890,127	$ 84,250,918	....
1886 ...	35,171,348	171,315,696	$ 87,064,778
1896 ...	42,624,570	327,800,499	156,484,803
1906 ...	95,013,205	656,250,900	328,460,401
1916 ...	231,101,625	1,422,179,632	765,918,732

Cannot Offer Attractions.

This table shows that in 1876 not quite $14,000,000 of life insurance was applied for and issued. Ten years later, nearly three times as much was issued. In 1916, the new insurance issued and paid for was almost twenty times as much as in 1876. It was nearly three times as great as in 1906. During the ten years there has been an amazing increase, of $765,918,732, in the amount of life insurance in force in Canada. This does not indicate any "old age infirmity" in the business. The older the companies grow, the more attractive is the article they have to sell. Much of this success is due to the introduction of new features in the modern policies, such as could not be operated under any assessment system. Among the attractive features are: (a) paying double the amount in case of death from accident; (b) making common life policies payable as endowments in old age; (c) granting surrender cash and loan values at all ages after a policy has been two or three years in force; and (d) cancelling future premiums in case of total disability. And quite recently, several companies have introduced "monthly income" insurance; also one-year term rates.

Premiums Usually Charged.

Here is a table of premiums usually charged for different forms of life and endowment insurance by a regular company at present:—

Annual Premiums per $1,000 on Six Different Ages.

Age	16	25	30	35	40	50
One-year term ..	$ 7.79	$ 8.22	$ 8.61	$ 9.23	$10.17	$14.79
Five-year term ..	9.14	10.01	10.93	12.11	13.67	22.40
Seven-year term .	9.18	9.74	10.27	11.08	12.43	19.80
Life	13.44	16.32	18.57	21.52	25.41	37.92
Twenty payment	20.97	24.32	26.68	29.59	33.21	44.19
End. 20 years	41.02	41.55	42.07	42.89	44.25	50.44

Companies with Evanescent System.

Having shown that the old and well-established system of life insurance, charging rates of yearly premiums sufficient to provide complete security not only for the present but to the "last man," whoever he happens to be, down to the end of this and the coming centuries, let us take a look at a cheap substitute that has arisen in the United States and Canada during the past 50 years, and which is already largely on the wane. In so far as it is in competition with the insurance companies, it is so only in relation to the term, or the all-life plans. It does not attempt the 20-payment or any endowment plan.

This modern life insurance idea was evidently born in the brain of an individual here and there in this western continent, whose education had not progressed very far into the higher mathematics, but who was carried away with enthusiasm as to the power for good of the principle of co-operation in fraternalism. Instead of the life insurance of the

A GUARANTEED INCOME THAT NEVER FAILS

THE ABSOLUTE SAFETY

of the Monthly Income Plan appeals to every thinking man. It will appeal to you. It furnishes your wife, your child or other dependent relatives with a

CONTINUOUS CHAIN OF MONTHLY CHEQUES THAT CANNOT BE OUTLIVED

You may have already made provision for your family, but

CONSIDER THIS—

There is danger of leaving plenty of property interests and too little income. Property must be producing income in order to be of immediate benefit to a bereaved family.

Financial problems should not be thrust upon a woman at a critical time.

The hands of unscrupulous men are always outstretched for money held by the unwary.

Large sums of money on hand invite extravagance or unwise expenditure.

Assuming enough left in cash to pay the immediate obligations of an estate, even a $25.00 monthly income will pay the rent if necessary, leaving a woman's mind free on that score, at least.

The Monthly Income Policy surpasses all other sources of income. Most people have been taught a monthly system of financing. It is the customary and most convenient way of receiving an income, and of settling accounts, particularly for anyone unaccustomed to handling funds.

YOU CAN COMMAND

this Modern Monthly Service by a moderate investment out of your current earnings. The income is certain, inalienable, free from administration expense and not exposed to loss through misjudgment or inexperience.

Any income from $10.00 to $200.00, or more, a month will be guaranteed.

Ask for our "Private Inventory Form." It will help you to take stock of your affairs.

CANADA LIFE ASSURANCE COMPANY

Canada Life Assurance Company, Toronto:
Dear Sirs,—

Address ....

future being based upon the steady accumulation of a reserve, or safety fund, laid aside year by year, as is done by all the companies, why not let that safety fund remain in the pockets of the members until needed? Again, instead of having so much consideration for the "last man," and collecting annually from everybody on his account, why have any last man to provide for? Why not, by keeping the brotherly co-operative fraternal principle in perpetual operation, have no "last man" in the case, in so far as plain, common life insurance is concerned? In other words, why not "pass around the hat" as each death occurs, and expect every member to drop therein the right sum, as called for, to meet the claim of the widow and orphan as it occurs—the penalty for not paying promptly being the loss of his own membership in the new and beneficient eldorado?

New Ones Every Day.

These and kindred fraternal ideas, seemed attractive when presented in the lodges and courts and temples, fifty years ago, especially when the more highly educated members did not happen to be present. In a few years the ideas became so prevalent in the United States, that not only were they approved and adopted by some already established fraternal organizations, such as the Knights of Pythias, and Masonic and other fellowships, but new ones sprang up in all directions, almost every day, whose sole object was the affording of the benefits of a small amount of life insurance to every healthy married man who was not over 45 or 50 years of age, at half the cost at which it was afforded by the companies. In many cases, no difference in the monthly assessment was made for a $2,000 certificate, whether the member's age was 20 or 40, and in no case were any allowed to join if over 45 or 50. In the case of very few of the societies, was any one allowed to have more than one or two thousand dollars on his life. Heavy drinkers were tabooed, generally, as a matter of course. The management of those associations was in the hands of persons elected by ballot at the annual conventions. These paid no attention whatever, for many years, to any of the difficult problems for the solution of which actuaries and skilled accountants are always found on the pay-rolls of the regular companies.

Heavy Death Losses.

Hence there soon arose heavy death losses and double assessments, followed by the early disappearance of a great many of those briefly prosperous societies. The following are a few of the hundreds which operated in Canada for a brief spell, and have long since gone: (1) Canadian Relief Society, 1886 to 1894; (2) Colonial Mutual Life Association, 1884 to 1898; (3) Masonic Mutual Benefit, London, 1878 to 1894; (4) Massachusetts Benefit Life Association, 1878 to 1897; (5) Mutual Reserve Fund Association, N.Y., 1875 to 1903; (6) Covenant Mutual Benefit Association of Illinois, 1871 to 1899; (7) Provincial Provident St. Thomas, Ont., 1884 to 1896; (8) Select Knights, St, Catharines, Ont., 1883 to 1898.

Lesson of the Failures.

The lesson of these hundreds of failures gave warning to others. By profiting thereby, about two hundred of them are alive to-day. Most of them have greatly increased their rates and improved their plans. Some of them, such as the Royal Templars, of Hamilton, the Canadian Order of Foresters and the Independent Order of Foresters, of Toronto, have become, in operation, regular old line companies, at much higher rates than formerly. Where this is the case, the membership, as a rule, has greatly decreased, and none of the societies accept any large amount on any one life, or offer the attractive endowment lines on which the regular companies do so large a part of their business.

Waning Enthusiasm of Fraternals.

To illustrate the high and low water marks of some of the fraternal societies, the cases of eight of them are here cited. They are headed by two Toronto societies—the Ancient Order of United Workmen and the Independent Order of Foresters. The Foresters are the owners of the handsome temple building, standing near the city hall, Toronto, and in it several of their lodge or court meetings are held, as well as their annual Supreme and High Court gatherings for the election of officers and other business, including change in rates and investment of funds.

The figures in column No. 1 show the highest amount of insurance the society had five or ten years ago, while those of No. 2 are the figures for the year ended December 31st, 1916. Similarly, the amounts stated under No. 3 represent the new insurance taken, in some one previous year, when everything was going well, at the former low rates of assessment. Finally, No. 4 column shows what a small corresponding amount of new certificates, in dollars, were obtained during the year 1916:—

Leading Assessment Societies.

Name of Society.	(1) Formerly in force.	(2) In force Dec. 31, 1916.	(3) New insurance formerly.	(4) New taken in year 1916.
I.O.F., Toronto	$ 264,960,140	$ 182,012,224	$ 31,145,785	$ 12,209,005
A.O.U.W., Toronto ..	58,666,500	15,206,047	7,361,000	324,000
Heptasophs	103,880,500	39,627,752	7,716,000	678,000
Knights of Pythias..	120,544,500	96,398,817	18,267,000	8,488,960
Pilgrim Fathers	25,243,000	2,572,718	475,250	11,250
Woodmen, Canada ..	13,942,660	5,785,750	2,285,100	381,500
Modern Woodmen ..	1,863,194,000	1,588,098,500	204,956,000	152,003,000
Royal Arcanum	497,018,340	338,500,000	26,002,500	6,986,000
Totals	$2,947,449,640	$2,268,201,808	$298,208,635	$181,081,715
Decrease	$679,247,832	and	$117,126,920	

Some Striking Comparisons.

Looking back to the second table in this article, it will be seen that the regular life insurance companies increased their total insurance in force, in Canada alone, during the past ten years, by the large sum of $765,918,732, but the above eight fraternals show a decrease of $679,247,832. This is in spite of all they could do to lessen the slump by the new amount of certificates issued each year.

It is a pretty bad outlook for a society when its new business coming on the books does not equal what is going off by death alone, to say nothing of the numerous lapses of certificates which are now constantly occurring in all such societies. The United Workmen of Toronto is thirty-eight years old: hence it is getting what all such societies will get when they come to about that age—viz., the old members dying off rapidly, and the income thereby decreasing, year by year, until the assets become so depleted that total collapse threatens. Five years ago this Order had $1,597,023 of apparently well-invested assets. On December 31st last these had fallen to $801,079, after defraying a heavy year's death loss of $749,741. Seven years ago, the new members coming in during the year numbered 3 106; but last year the entrants numbered only 564, while the certificates terminated numbered 10,648.

Many lodges have been suspended of late for want of their assessments coming forward, and many more appear to be in imminent danger, having less than ten members. For example:—Lakeview, 6; Little Britain, 7; Sutton, Sturgeon Falls, Niagara, Finch, Parkhill and Collins Bay, each 8; Carluke, Osgoode Mountain, Kenmore and Enterprise, each 5; Plattsville, Ayr and Wexford, each 4; Exeter and Teeswater, 3; and Eau Claire and Alexandria, only 2 each. Instead of paying the full $2,000 or $1,000 each, promised to the older members when they joined many years ago, it has adopted the practice of charging up an ascertained deficiency, according to a resolution of the Grand Lodge. Hence we find in the September, 1917, list of death payments, such figures as the following, opposite the names of deceased brethren: C. W. Bradley, $1,028; W. E. Beamish, $1,170; Andrew Percy, $1,101; John Mustard, $950; S. S. M'Elary, $657.80; J. Robertson, $812; Hugh Rose, $684; I. H. Wigle, $700; W. Wickens, $904; J. B. Johnson, $904; Henry Kerr, $1,180; A. B. Dow, $806; J. W. Ross, $930, etc.

Independent Order of Foresters.

The Independent Order of Foresters, Toronto—a much larger representative of fraternal life insurance—seems traveling in the same direction, and has resorted to a similar method of cutting down the amounts its members were led to expect when they joined, many years ago. Dr. Oronhyatekha, the founder, and many other of the original enthusiastic pushers of the Independent Order of Foresters, have passed away, and the bottom of the enterprise seems to have largely fallen out of late. In [illegible] at a crowded meeting in the temple, the Doctor boasted that the Foresters had more millions of insurance on its books than all five of the Canadian companies mentioned in the first table given in this article. They had $228 405,945, and the Foresters alone, then, had no less than $230,107,000. What has occurred since then? The 1917 blue-book shows that the five companies have nearly trebled their millions, and have grown to $667,566,030, while the Independent Order of Foresters, in all countries the world over, have dropped to $182,012,224. Of this $72,-

Public Confidence

is indicated by the THREE BILLION DOLLARS Life Insurance which 15,000,000 Policyholders have secured in this big, sturdy American Company.

Millions of Dollars of Prudential Life Insurance are held by Canadians and a large force of Prudential Agents are busy every day paying death claims.

Over one hundred Prudential Agents went to the front with Canadian war forces.

The Prudential is one of the Most Popular Companies in Canada.

The Prudential Insurance Company of America

Forrest F. Dryden, President **Home Office: NEWARK, N.J.**

INCORPORATED UNDER THE LAWS OF THE STATE OF NEW JERSEY

AGENTS WANTED

701,665 is on Canadian lives, and $109,310,559 is held by people in other countries. The Doctor made a strong point, also, amid great applause, that during that previous year, 1902, those five companies had secured only 23,585 new members, while the Foresters, founded by him thirty years previously, had booked no less than 34,311. How do they now stand, comparatively? The blue-book credits the companies with 26,950 and the Foresters with the small number of 10,964, only 3,043 of whom were from its Canadian courts, and 7,921 from abroad.

Losses Heavier Now than Assessments.

It must be borne in mind that the Foresters now issue the cheapest sort of certificate, payable at death only, and for from only $1,000 to $5,000 on any one life. The companies, on the other hand, issue nearly as many endowments and twenty-payments, as they do of ordinary lifes, and they write as much as $100,000 upon a single life. It is not surprising, therefore, to find that one of the five companies alone, has now a yearly premium income of $14,001,836, while the Foresters received, during the same year, 1916, only $3,328,599 in assessments from its members. Furthermore, the Foresters met with death losses in 1916 of $3,605,088. This, it will be seen, is $276,489 more than its entire membership paid in assessments for that year. The balance had to be derived from interest received on its invested funds, and from cutting down the face value of its certificates, as the Ancient Order of United Workmen and other assessment societies are now doing, in order to eke out their existence for a time, at least.

OVER FIVE THOUSAND BARN FIRES

These Occurred in Five Years—Ontario's Losses Last Year Were Serious

During the years 1912-1916 inclusive, 5,200 barns were destroyed in Canada, with an aggregate loss of over $7,850,000. These, like the majority of fires, might have been avoided by the exercise of intelligent forethought and proper care. Investigation shows that the most prolific sources of barn fires are lightning and spontaneous combustion. Evidence gathered from all parts of Canada and the United States proves that rodded buildings are practically immune from lightning damage. The cost being a fraction of the possible loss in case of fire, it is of economic importance to the farmer that every barn should be efficiently protected by lightning rods.

Many Fires in Ontario.

In August last year, for example, there were 234 barn fires in Ontario, according to the statistics of the Ontario fire marshal, Mr. E. P. Heaton. These fires involved a loss of $250,000. Lightning was the primary cause and in no case was a barn equipped with lightning rods. Mr. Heaton said at the time:—"The period for barn fires from unknown causes commenced about August 15th, and for the next three months we expect to be called upon to make many investigations. We fear conditions, as we have so far found them, indicate a continuance of heavy losses on barns. We hope this anticipation may fail of realization, but we have great apprehension that we shall not be found mistaken. We are prepared to promptly investigate barn fires of unknown origin, and when the season is over, we must squarely face the issue as to the means to be taken to avoid the terrible and inexcusable waste, even if it be found to be necessary to appeal to the legislature for definite action."

May Be Legislation.

In a statement issued a year ago by Ontario's fire marshal, Mr. Heaton, it was pointed out that the remedy for these barn fires was in the hands of the fire insurance companies themselves, "but," he added, "if they do not take it up it may be necessary to resort to legislation—the loss is entirely too serious to be overlooked. From information received I believe that the average barn to-day is not adequately ventilated, and when there is an exceptionally heavy hay crop like that of this year and labor conditions compel the farmers to put it in the barns before it is thoroughly cured, heating, leading to spontaneous combustion, it bound to occur. If the companies in issuing policies enforce certain requirements as to ventilation then the danger can be largely guarded against."

MOVEMENT OF INSURANCE COMPANIES

Several Newcomers Here Last Year — Additional Licenses Issued

The following companies received licenses last year from the Dominion Insurance Department for the class or classes of business shown below in addition to the classes for which they were already licensed:—

Canadian Companies.

Company.	Additional Class or Classes.
British America	Inland transportation insurance.
Canada Accident	Automobile insurance.
Canadian Surety	Burglary, plate glass and automobile insurance.
Globe Indemnity of Canada	Fire insurance

British Companies.

Company.	Additional Class or Classes.
Royal Exchange	Automobile insurance.

United States Companies.

Company.	Additional Class or Classes.
German American	Sprinkler leakage and automobile insurance (excluding insurance against loss by reason of bodily injury to the person).
Phoenix	Automobile insurance (excluding insurance against loss by reason of bodily injury to the person).

Dominion Licenses Issued.

During 1917 the following companies received a license for the first time from the Dominion Insurance Department:—

British and Colonial Companies.

Company.	Chief Agent.	Class of Business.
Union Insurance Company of Canton, Limited	C. R. Drayton, Toronto	Fire and automobile insurance.

United States Companies.

Company.	Chief Agent.	Class of Business.
Alliance Insurance Company of Philadelphia	Robt. Hampson & Son, Limited, Montreal	Fire and automobile insurance.
Columbia Insurance Company	R. MacD. Paterson, Montreal	Fire and automobile insurance (excluding insurance against loss by reason of bodily injury to the person).

Both the Alliance Insurance Company of Philadelphia and the Columbia Insurance Company formerly operated in one or more provinces of Canada under provincial licenses.

Dominion Insurance Licenses Cancelled.

The Factories Insurance Company by a reinsurance agreement dated December 2nd, 1916, reinsured its business in the Western Assurance Company, Toronto. The deposit of the company to the accepted value of $51,537 is still in the hands of the Receiver General, but the company has given notice as required by the Insurance Act of its intention to apply for its release.

New Companies in Ontario and Manitoba.

The following insurance companies were admitted to transact business in the province of Ontario during 1917:—Pacific Marine Insurance Company, Tokio Marine Insurance Company, Limited, Stuyvesant Insurance Company, Provident, Accident and Guarantee Company, Union Insurance Society of Canton, Limited, and Thunder Bay Mutual Fire Insurance Company.

The Open Door of the Mutual Life of Canada

WELCOME.—Visitors to the home of The Mutual Life of Canada at Waterloo are always made welcome, and acquaintances and strangers alike are ever sure of having extended to them "the glad hand." New members are welcomed into the Mutual family in the same cordial spirit.

SECURITY.—From heat, cold and storm we retreat to an open door, and for financial protection for our households we turn to an institution such as The Mutual Life of Canada. This Company has approximately one hundred and twenty millions of business in force and the reserves to guarantee its obligations include a magnificent surplus.

A HOME.—The Mutual Life of Canada is more like a family or a fraternity than an insurance company organized on another system. No favored class controls The Mutual; its assets are the sole possession of the policyholders of the Company. The Mutual of Canada is truly "a family affair," but the family includes every policyholder, and they now number nearly fifty-five thousand.

INSURANCE AT "COST PRICE."—From the time of its inception in 1869, The Mutual Life of Canada has adopted as its aim the giving of the largest amount of protection for the least possible outlay, and this aim has been fully achieved as our wonderful dividend records prove.

"SAFETY FIRST."—Cheapness in itself is not, however, the most important thing in life insurance, safety comes first. The Mutual Life of Canada has, therefore, been conducted as an old-line, legal reserve company—in other words, The Mutual has every advantage inherent in other companies, with mutuality added.

Is there a Mutual Policy in your Home?

The Mutual Life
Assurance Company of Canada
Waterloo, Ontario

168

The following changes took place during the past year in Manitoba:—

Companies (Dominion licensees) registered to do business in Manitoba during 1917:—Casualty Company of Canada, plate glass; Hamilton Fire Insurance Company, fire; American Surety Company of New York, guarantee.

Companies licensed by Manitoba province in 1917:—Security Mutual Casualty Company, employers' liability and workmen's compensation; and Merchants' Casualty Company, accident, automobile, guarantee, burglary, and theft.

Companies ceasing to do business in Manitoba:—Canada Weather Insurance Company, Factories Insurance Company, Capital Life Assurance Company, La Savegarde Life Insurance Company, and State Farmers Mutual Hail Insurance Company.

Companies transferred to Dominion licensees:—Columbia Insurance Company, and Stuyvesant Insurance Company.

Underwriters' agencies ceasing to do business in Manitoba:—Factories Underwriters, and Security National Underwriters.

In British Columbia.

The following companies were licensed under the British Columbia Fire Insurance Act to transact the business of fire insurance during 1917:—Guardian Fire Insurance Company (Salt Lake City, Utah), and Union Insurance Society of Canton, Limited.

The following companies were licensed under the Insurance Act of British Columbia during 1917:—Western Life Assurance Company (Winnipeg, Man.), to transact life insurance, and Union Insurance Society of Canton, Limited, to transact marine and automobile insurance.

The following companies obtained supplementary licenses in British Columbia during 1917:—Alliance Assurance Company, Limited, British Crown Assurance Corporation, Limited, Canadian Surety Company, Ocean Accident and Guarantee Corporation, Limited, General Accident Assurance Company of Canada.

The following companies ceased to transact business in British Columbia during 1917:—Factories Insurance Company, Franklin Fire Insurance Company of Philadelphia, German Alliance Insurance Company, Michigan Commercial Insurance Company, and New Zealand Insurance Company.

Changes in Alberta.

The following companies holding Dominion licenses retired from Alberta last year:—The Canadian Casualty & Boiler Insurance Company; amalgamated with the General Accident Assurance Company of Canada. Western Insurance Company; withdrawn. The Factories Insurance Company; policies reinsured by the Western Assurance Company of Toronto. Gresham Life Insurance Company; withdrawn.

The following companies holding Dominion licenses were admitted for registration in Alberta last year:—Hamilton Fire Insurance Company, and Saskatchewan Life Insurance Company.

Since January 1st, 1917, the following underwriters' agencies have been registered in Alberta:—The Britannic Underwriters of the Employers' Liability Assurance Corporation, British Empire Underwriters of the British-America Assurance Company, the Minnesota Underwriters of the St. Paul Fire and Marine Insurance Company, and the Northwestern Underwriters of the North-Western National Insurance Company.

The companies registered to transact business in the province of Quebec since January 1st, 1917, were as follow:—Provincial licenses.—Funeral insurance companies:—La Société Co-Opérative de Frais Funéraires, Montréal; Compagnie Bonnier & Frères Assurance Funéraire, Montréal; Compagnie Générale de Frais Funéraires, Limitée, Montréal; Compagnie de Frais Funéraires des Cantons de l'Est., Sherbrooke; La Compagnie d'Assurance Funéraire Urgel Bourgie, Montréal.

Mutual fire insurance companies formed by municipal councils:—St. Mathias, and St. Barnabé.

Parish mutual fire insurance companies:—St. Thomas de Montmagny, L'Epiphanie, St. Ambroise de Kildare, Roberval, St. Sylvestre, and St. Jean Paptiste d'Ile Verte.

Dominion licenses registered to transact business in the province:—The Hamilton Fire Insurance Company, registered to transact fire insurance, Hamilton; Stuyvesant Insurance Company of New York, registered to transact fire insurance, New York; the Insurance Company of the State of Pennsylvania, registered to transact fire insurance, Philadelphia; Tokio Marine Insurance Company, Limited, registered to transact inland and ocean insurance.

This company ceased to do business last year:—Provincial Fire Insurance Company of Montreal, re-insured on May 3rd, 1917, with the Strathcona Fire Insurance Company, Montreal.

CAUSES OF DEATH, BY OCCUPATION

Definite Conclusions Drawn from an Analysis of the Available Figures

By J. P. MOORE, A.I.A.

The United States Department of Labor has published an interesting bulletin of the causes of death by occupation as shown by the mortality experience of a large industrial insurance company. The data comprise the records of 94,269 deaths which occurred in the years 1911, 1912 and 1913 among occupied white males, and of 102,467 deaths in the same three years among white females, at age 15 years and over, insured in the industrial branch of the company. Attention was directed primarily to those occupations which were represented in large numbers, or which possessed exceptional interest from the viewpoint of hazard. It was impossible to compile occupational death rates as the number of living policyholders in each occupation was not available, and, of course, there is also the question of changes of occupations which affect these mortality rates, such for instance as a blacksmith engaging in less laborious work after his strength is lost, or a man afflicted with tuberculosis securing outdoor employment. It is pointed out that some occupations are handicapped because they attract men of poor physique or of a particular race whose general mortality is high.

Special Hazards of Workers.

The insured males, at ages 15 and over, give a mortality 5 per cent. higher than that found in the registration area of the United States, the maximum difference being found in the age period 35 to 44, when it is 47 per cent. higher. For females the difference is not so marked, the maximum here being in the age period 55 to 64 where the excess is nearly 12 per cent. The higher rates for the insured persons may be expected in view of the general and special hazards to which the working men and women are exposed.

The table at the end of the article establishes some interesting relations. In all age periods, typhoid fever shows a higher proportion of deaths in the general population than amongst the insured. This is explained by the fact that the industrial policyholders are located mostly in urban centres, where typhoid fever rates are lower. On the other hand, tuberculosis of the lungs has a uniformly higher representation amongst insured males; so have cirrhosis of the liver and Bright's disease. Cancer and suicide show higher proportions in the general population.

Mortality by Occupation (Males).

The occupations selected for consideration are those which satisfy three conditions. First, to permit definiteness of statement; second to embrace a sufficiently large number of cases; third, to indicate the presence of some element of hazard. Such titles as "policemen," "watchmen" failed to satisfy the first condition, "electric linemen" the second, "carpenters," "storekeepers," "canvassers," the third.

Bakers.—The principal causes of death are pulmonary tuberculosis, organic diseases of the heart and Bright's disease. In the age period 25-34, pulmonary tuberculosis causes 51.7 per cent. of all deaths amongst bakers as against 40.9 per cent. in all occupations. At ages 35.44 there is again an excess, but not so great, 37.4 against 32.9. At other periods the proportion is lower than that of all occupations. Except in the age period 35 to 44 the proportion of pneumonia is uniformly lower among bakers than in all occupations. The mortality from suicide is strikingly high, being 5.4 for all ages against 2.3 for all occupations. Other forms of violence are found to be lower. There were 654 deaths among bakers.

Blacksmiths.—Tuberculosis of the lungs shows a lower index of mortality than in the general group at all age periods, except at 35-44 years (35.8 per cent) and 65 years and over (3 per cent.). For all ages together the relative index is low. Cancer on the other hand shows a uniformly high index of

THE
SOVEREIGN LIFE
ASSURANCE COMPANY
OF CANADA
WINNIPEG,
MAN.

The Lesson of War-Time

Life insurance was in greater demand among the public in 1917 than ever before. The amount of business written and the gain in force were the largest in the history of the business. Why? Because in these war times, when so many securities have shrunk in value or have proved unsaleable, the absolute security of life insurance is recognized and appreciated. The figures show that the people of Canada, by the tens of thousands have seen the point.

In this increased business of 1917, The Sovereign Life Assurance Company has fully shared. All departments of the Company's business have shown striking gains. Our surplus to policyholders was largely increased and, in proportion to insurance in force, will compare favorably with that of much older companies.

A life insurance policy enables you immediately to create or increase an estate for the protection of dependent ones. At the same time, you make provision for your own future.

A RECORD OF GROWTH

Year	New Business	Business in Force
1908	$862,500	$1,334,000
1911	$1,354,804	$4,006,145
1914	$2,241,107	$7,427,697
1917	$4,200,000	$11,500,000

mortality from age 45 onward. Organic diseases of the heart show slight variation from the conditions in all occupations. Suicide is relatively prominent in all age periods up to age 55, while other accidental violence is distinctly lower after age 34. There were 1,273 deaths among blacksmiths.

Cigar makers and tobacco workers.—The dusty character of this occupation suggests a high proportionate mortality from tuberculosis of the lungs, which is borne out by the facts. Pneumonia is low in every age period. Suicide is high and accidental violence low. Bright's diseases is very low at ages 35-44, but is strikingly high in the age period 65 and over, where it figures as the principal cause of death. There were 693 deaths in these occupations.

Clerks, bookkeepers and office assistants.—There is a heavy preponderance of deaths in the early age periods due mainly to tuberculosis of the lungs, which causes 46.3 per cent. of all deaths in the period 15-24 and 51.2 per cent. from 25 to 34. For all ages combined, clerks, bookkeepers and office assistants lead all the occupations listed in the high index of mortality from this cause. Bright's disease exhibits a high proportionate mortality at ages 25 to 44, and heart disease for all ages below 44. Accidental violence is uniformly very low. The number of deaths was 4,139.

Mortality Is High.

Compositors and printers.—For every age division tuberculosis of the lungs shows a higher proportionate mortality than in the general group. The index is highest in the age period 55 to 64. Organic diseases of the heart also show a higher proportionate mortality at all ages. Accidental violence and pneumonia are lower throughout. The number of deaths was 1,056.

Railway enginemen and trainmen.—This title includes ticket collectors, conductors, brakemen, dining car employees and railway mail and express employees. There were 947 deaths. The mortality from accidental violence is so high that it may be considered frightful. For all ages it constitutes 42.3 per cent. of the total deaths, for ages 15 to 24 it actually represents 66.5 per cent. and for ages 25 to 34, 57.7 per cent. Where lowest, at age period 65 and over, it is still more than 200 per cent. of the normal. Typhoid fever is also high, due no doubt to the questionable water supplies used by the men in this occupation. There is a great preponderance of deaths in the early age divisions, and the average age at death is low (37.4 years).

Farmers and farm laborers.—This class was chosen with a view to demonstrating the absence, rather than the presence of any one outstanding cause of death. The number of deaths was 3,890. A surprising feature is the high proportionate mortality from suicide at most ages. Typhoid fever is high below age 44, and cancer is high throughout. On the other hand, tuberculosis of the lungs is low for every age period. Pneumonia is lower than in the general group except from ages 15 to 24. The average age at death is high (58.5 years). Gardeners, orchardists and nurserymen are included in this heading.

Iron moulders.—Typhoid fever is high below age 44. Tuberculosis of the lungs shows little variation from the normal. Organic diseases of the heart are high, particularly after age 44, being developed, no doubt, by the hard work required. From pneumonia, iron moulders show the highest percentage of deaths of all occupations, in each age period. Suicide is high for all ages and there would appear to be indications of an excessive use of alcohol. There were 1,646 deaths.

Laborers.—This title includes simply laborers of undefined classification. There were 10,748 deaths. The fact that laborers are exposed to wind, rain and cold leads to a high proportionate mortality from the respiratory diseases, the excess being about 28 per cent. Tuberculosis, on the other hand, is below the normal; suicide is markedly low, and accidental violence almost normal. Typhoid fever is more frequent than in the general group. Alcoholism is higher than normal from age 25 to 54.

Longshoremen and stevedores.—This title includes dock laborers and ship laborers. There were 651 deaths. Tuberculosis of the lungs is distinctly high. Pneumonia is also high, particularly between the ages 25 and 34. Accidental violence is one of the principal causes of death, being very high at ages 45 to 54. Bright's disease and cancer are high at the older ages.

Machinists.—This title includes die makers, tool makers, machine hands and repair men in automobile, car, railroad, machine and other establishments where iron and steel are made into finished products. The number of deaths was 3,152. Pulmonary tuberculosis has a higher proportion of deaths than for all occupations. Typhoid fever is high for all ages, cancer between 35 and 64, heart disease between 25 and 64, and Bright's disease for the later age periods. Suicide is high for all ages.

Masons and bricklayers.—The tuberculosis proportion is low up to age 24, after which it steadily rises, suggesting that the work slowly exhausts those engaged in it. Pneumonia is much above the normal at the younger ages, from 25 to 44 below, and afterwards somewhat above. Suicide and accidental violence are low, cancer is high from age 55 onward, and alcoholism from age 25 to 34. There were 1,748 deaths among masons and bricklayers.

Painters, paperhangers, varnishers, sign writers.—The number of deaths was 2,722. The mortality from lead poisoning is excessive; alcoholism shows a high relative index, cerebral hemorrhage, apoplexy and paralysis also exhibit high relative indexes. Pneumonia and bronchitis are low; tuberculosis about normal. Bright's disease and cirrhosis of the liver are high.

Plumbers.—As in the case of masons the hazard from tuberculosis appears to increase with the duration of service. Pneumonia and cancer are below the normal. There is a very high proportion of deaths from cerebral hemorrhage, apoplexy and paralysis at ages below 44; the mortality is high for the same periods from Bright's disease. Number of deaths 1,153.

Railway track and yard workers.—This title includes switchmen, air-brake inspectors and repairers, section laborers, crossing watchmen and flagmen. There were 1,932 deaths. Tuberculosis of the lungs is consistently low and accidental violence consistently very high. There may be a connection here as the percentages of deaths attributed to accidents decrease steadily with every age period, and it is generally at the earlier ages that the effects of tuberculosis are most marked.

Saloon keepers and bar tenders.—There is a great preponderance of deaths in the middle period of life. Between the ages of 25 and 54 over 82 per cent. of all deaths occur among saloon keepers and bar tenders as against 47 per cent. in all occupations. It is between these ages that tuberculosis of the lungs is below the average, but on the other hand, deaths from cerebral hemorrhage, apoplexy, paralysis, heart diseases and pneumonia are relatively most numerous. Cirrhosis of the liver is high at all ages. Bright's disease increases steadily up to age 64, after which it drops slightly. Suicide is high and accidental violence low. There were 2,190 deaths.

Teamsters, drivers and chauffeurs.—There were 6,471 deaths in this class. Accidental violence, alcoholism and pneumonia all show relatively high figures. Tuberculosis of the lungs is slightly higher than the normal. Organic diseases of the heart, cerebral hemorrhage, apoplexy and paralysis are fairly low; 65 per cent. of the deaths occur between ages 25 and 54 as against 47 per cent. for all occupations.

Textile-mill workers.—This title includes operatives in the minor textile industries such as carpet, tent, sack, mat, veil making. The number of deaths was 2,390. Typhoid fever exhibits high indexes throughout. Other causes are near the normal, and, in fact, the average age at death in this occupation is very close to the average for all male occupations.

Mortality Among Females.

Whereas tuberculosis of the lungs claims the largest proportion of deaths amongst occupied males, the chief cause amongst females is organic diseases of the heart, which are responsible for 14.8 per cent. of the deaths. The proportion increases constantly with advancing years, and at all age periods it is higher than among males. Tuberculosis takes second place and cancer is third with 9.9 per cent. of all the deaths—a figure almost twice as high as that of the men. Cerebral hemorrhage, apoplexy and paralysis also show a higher percentage in comparison with males. Bright's disease is about equal, and pneumonia, suicide, accidents and cirrhosis of the liver are lower; 86 per cent. of all the deaths occurred among housewives and housekeepers, the percentage being greater at the higher ages and less at the lower.

Housewives and housekeepers.—There were 88,151 deaths in this class, the average age at death being high—53.3 years. The causes of death correspond closely with those of the general group just referred to.

Domestic servants.—Includes nurse girls, companions and home laundresses, the number of deaths being 4,235. The proportionate mortality from suicide is high throughout and below age 34 is considerably higher than for males of the same ages. Accidental violence also accounts for a high percentage

of deaths in each period. Tuberculosis of the lungs and cancer are somewhat above the normal; organic diseases of the heart, cerebral hemorrhage, apoplexy and paralysis lower.

Dressmakers and garment workers.—Tuberculosis of the lungs is much above the average at every age period, cancer becomes important at the higher ages. There were 2,172 deaths.

Textile-mill workers.—The number of deaths among female textile-mill workers was 1,742, as against 2,390 among male workers in similar occupations. Typhoid fever again shows a high proportional figure. From tuberculosis of the lungs the deaths, particularly at the lower ages, show a much greater mortality than among male textile workers, while the deaths are lower from heart diseases, Bright's disease, accidents and pneumonia.

Clerks and office assistants.—This title includes stenographers, proof readers, copy-holders, bookkeepers and post-office clerks. The number of deaths was 1,235. The death rate is very high between ages 15 and 34 as 85 per cent. of all deaths occurred within these limits, while the corresponding percentage for all female occupations was only 22, and for males engaged in somewhat similar occupations 53 per cent. Typhoid fever is also high at these ages. Cancer and Bright's disease are low throughout, pneumonia about normal. Pulmonary tuberculosis accounts for a large proportion of the early deaths.

Store clerks and saleswomen.—Includes cashiers, buyers and messengers. Suicide and accidental violence are above the average; tuberculosis of the lungs is very prominent before age 44, and in consequence the average age at death is low. The number of deaths was 794.

Average Age at Death.

In considering the average age at death it is necessary to bear in mind that some occupations are, in general, composed of large proportions of young people. This would be the case particularly with non-domestic female workers. The distribution of the ages of the living in each occupation is not known.

Males.	Average age at death. Years.
Clerks and office assistants	36.5
Enginemen and trainmen (railway)	37.4
Plumbers	39.8
Compositors and printers	40.2
Teamsters, drivers, chauffeurs	42.2

Store clerks and saleswomen	28.0
Textile-mill workers	33.9
Dressmakers and garment workers	42.0
Domestic servants	49.1
Housewives and housekeepers	53.3
All occupations	51.1

Certain definite conclusions are drawn. First there is noted an obvious relation between exposure to moving machines and a high mortality from accidents; between the sale of distilled liquors and a high mortality from alcoholism; between the employment of lead in certain industries, and a high mortality from lead poisoning.

A second group shows relationships of a more insidious character. Thus where there is a high proportionate mortality from tuberculosis, one can find the presence of dust as a frequent concomitant to the industrial process. The dust may be mineral, metallic or vegetable. The influence of sedentary employment and posture is also found to be important as a factor in a high tuberculosis rate; this is exemplified by certain occupations such as clerks, compositors and garment workers.

The occurrence of an undue amount of alcoholism is associated with an excess of cirrhosis of the liver, Bright's disease and suicide. Where lead is in constant use, the mortality from cerebral hemorrhage, apoplexy and paralysis is high.

Respiratory diseases are prominent where the worker is exposed to cold, dampness, or violent changes in temperature. Organic diseases of the heart are frequent where the work is heavy as among iron molders, and typhoid fever where water supplies are questionable. Accidents decrease as the duration of service and experience increases.

As men suffer from numerous occupational diseases which do not directly cause death, it is considered of the greatest importance that living workers be examined, and that the diseases from which they suffer be accurately recorded.

Comparison with Census Figures.

In the following table the percentages of deaths in the insurance experience are indicated by the letter (a) and those taken from the United States census by the letter (b).

Percentage of deaths from principal causes in all specified occupations for white males age 15 years and over:—

BENEFITS OF GOVERNMENT ANNUITIES

They are Guaranteed by State—No Forfeiture—Immunity from Law Courts

BY S. T. BASTEDO.

At a time when the attention of Canadians is turning in the direction of thrift, and when insurance companies and financial institutions are following the lead of the Canadian government in popularizing the annuity idea, readers of *The Monetary Times* may possibly be interested in a brief résumé of the salient features of the Canadian government annuities act, which was passed in order that habits of thrift might be promoted among the people of Canada, and that they might be encouraged and aided to make provision for their old age by the purchase of annuities from the government.

The main principles which underly government annuities are, that they are guaranteed by the state; that there is no forfeiture in case premiums are interrupted or should cease altogether; that they cannot be seized or levied upon by or under the process of any court; that they cannot be alienated or anticipated; that they are not transferable; and that they are exempt from taxation under the Dominion income tax act.

Under the act the government may contract for the sale to any person domiciled in Canada of an annuity of from $50 to $1,000, to be paid for life; or for a term of years certain, not exceeding 20 years, provided the annuitant shall so long live; or for a term of years certain, not exceeding 20 years, or for the life of the annuitant, which ever period shall be the longer. An annuity may also be purchased on the joint lives of any two persons; any society or association of persons, being a body corporate for fraternal, benevolent, religious or other lawful purpose, may purchase annuities for its members; and employers of labor may enter into an agreement with their employees for the purchase of annuities otherwise purchasable by such employees as individuals.

Annuities Either Deferred or Immediate.

Annuities may be either deferred or immediate. A deferred annuity is one that may be contracted for at the age of 5 or any later age; and there are three plans on which it may be purchased, namely, plan "A," plan "B," and the guaranteed plan. Under plan "A" and the guaranteed plan if the annuitant dies before the age fixed for the annuity to begin all his payments with 3 per cent. compound interest up to the date of his death will be returned to the legal representatives of the purchaser.

Under plan "B" the rate is lower for the same annuity than on either of the other plans, and in consideration of that fact no portion of the purchase money is returnable should the annuitant die before attaining the annuity age. Under all the plans the annuity is payable quarterly for life, unless otherwise arranged. Under plans "A" and "B" the contract ends with death after the annuity begins.

Under the guaranteed plan, which may be for a period not exceeding 20 years, the annuity would in any event be paid for the period guaranteed. For example, if the annuitant should purchase an annuity payable for life or for 20 years in any event, and should die, say, at the end of 5 years, 60 quarterly instalments would be continued to his legal representatives.

The earliest age at which annuities may become payable is 55, with the sole exception that should a person purchasing a deferred annuity become through invalidity or disablement unable to complete the purchase, and the sum at his credit will buy him an annuity of not less than $50, the annuity may begin at his then age, though he be under 55. An annuity may, of course, be arranged to begin at any later age than 55, and the longer it is deferred the smaller will be the payment to be made, the rate for an annuity to begin at 65 being on plan "A" less than two-fifths of what the rate would be for the same annuity to begin at 55; and on plan "B" it would be less than one-third as much.

No Fixed Rule for Purchases.

The purchase may be made, at the discretion of the purchaser, by a single payment in advance; by payments of amounts at irregular intervals; by annual premiums, which may be split up into weekly, monthly, quarterly or half-yearly instalments; or in any other manner that may best suit the purchaser's convenience. Should the payments be not made strictly in accordance with the terms of the contract there is no penalty; and the purchaser will in any event receive at the age fixed for the annuity to begin whatever annuity his payments will purchase. If, however, these should not be sufficient to secure the minimum annuity of $50 the amounts paid with 3 per cent. compound interest will be returned to him.

The purchase money may be paid to the postmaster of any postal money order office; or it may be remitted, free of postage, by any of the usual methods of remission direct to the department. The first instalment of annuity becomes payable an even number of years from the date on which the first payment on account of the purchase was made.

Immediate annuities are purchasable by a single payment in cash in advance by any person who has attained the age of 55, or any older age, a man of 60 paying less for the same annuity than a man of 55, a man of 70 less than a man of 60, the rate decreasing in like manner until the age of 85, when it becomes stationary. They may be purchased on the ordinary life plan or on the guaranteed plan, and the first quarterly instalment of annuity becomes payable three months from the date of purchase. The purchase money may be remitted by marked cheque or bank draft made payable to the credit of the postmaster-general.

When the details of the purchase have been arranged a contract or policy setting forth the conditions of the purchase is issued to the annuitant. No medical examination is required. No deductions are made from the purchase money for administration expenses of any kind, every dollar the annuitant pays being credited to him on annuities' account.

The cost of an annuity varies according to the nature of the contract, the age at which payments are commenced, and the age at which the annuity becomes payable. The rates for females are somewhat higher than the rates for males in consequence of the superior longevity of the former. The greater the obligation of the government to the annuitant the larger, of course, is the premium to be paid.

The rate of interest allowed on payments made is 4 per cent., but as the annuity benefits are calculated on the aver-

age expectation of life they represent a very much larger return on the investment than 4 per cent. Take, for example, the case of a young man of 25 buying a life annuity of $500 to begin at 60, with the proviso that should he die before 60 all his payments with compound interest at 3 per cent. up to the date of his death shall be returned to his heirs, and that from 60 the payment of $125 every three months shall be guaranteed for a period of 10 years in any event. For such an annuity he will pay to the government from age 25 to 60, or for 35 years, the sum of $72.85 per annum, or $6.08 per month, which with interest will amount at the end of the 35 years to $5,580. So it will be seen that his annuity represents a return on his investment equal to 9 per cent. so long as he may live, with a positive return of $5,000 guaranteed.

Benefits of Immediate Annuity.

If instead of purchasing a government annuity he deposited the same amounts in a savings bank at 3 per cent. compound interest, he would have at the end of 35 years the sum of $4,500, and if, by way of illustration, he were then able to invest his $4,500 at 5 per cent., and were to spend $500 a year, both capital and interest would be exhausted before he was 73. A better plan would be to invest his $4,500 in an immediate annuity, which would yield him an income of $432.69 payable quarterly so long as he might live, or over three times the return he would secure if the money were left in the bank.

Where the investment is in an immediate annuity the benefits, though calculated on the same interest basis, are still more striking. For example, an investment in a life annuity by a man of 60 will yield him so long as he may live, the contract to end with his death, a return equal to over 9½ per cent. on the sum invested; a man of 65, over 11 per. cent.; a man of 70, over 13½ per cent.; a man of 75, over 16½ per cent.; a man of 80, over 21 per cent.; and a man of 85 over 27 per cent. A considerable number of persons of both sexes have purchased annuities at these and even at greater ages. One man purchased at 87 and lived to be 92, receiving back in annuity payments $500 more than he had paid for his annuity.

As a means of making provision for old age, there is no other plan of investment which can be made with the same facility, or with the same security, and there is positively no other plan under which anything like the same return may be obtained, for it will enable the purchaser to spend of his capital as well as the interest, and without his income becoming smaller no matter how long he may live.

An eminent actuary and manager of one of Canada's leading insurance companies in writing to the superintendent a few years ago, said: "In discussing the system of government annuities with my friends from time to time I have always frankly stated that in my opinion the benefits offered for the rates charged are exceedingly liberal, and that I do not know of any institution which could possibly afford to offer terms so advantageous. If the general working population of Canada were able to realize the favorable basis on which annuities could be secured from the government, there would be very few among the thrifty and thoughtful who would not take advantage thereof;" and, of course, the "working population" includes men, women and children of all classes who must earn their own livelihood, and provide for their own future.

INSURANCE AND EDUCATIONAL INSTITUTIONS

It Should Be Part of Curricula of High Schools, Colleges and Universities

BY J. T. WILSON.

The subject of life insurance as part of the curricula of our high schools, colleges and universities is bound to come at no distant date. In the United States a number of the universities give a place to the study, and the importance of it is generally recognized.

At the Winnipeg convention of the Life Underwriters' Association of Canada last year, the question received a considerable degree of attention, and an interesting address was delivered there by Professor Theodore Boggs, of Vancouver. This address was a real contribution, and will repay careful reading. A lengthy summary appeared in *The Monetary Times* in August, and it will appear in the convention number of the Underwriters' News, the official organ of the Life Underwriters' Association of Canada.

Advanced by Local Associations.

This question of educational publicity on the vitally important subject of life insurance is being also advanced by a number of the local associations of life underwriters in addresses by some of their members before the student body in high schools and academies.

Even an elementary acquaintance with the basic principles of life insurance by the students in the high schools and academies would serve to make the business much better understood in the homes by the parents and older members of the family. The work of the field man would be easier, the cash value of his time greatly increased, the benefit of the business extended to many new beneficiaries, and a larger measure of protection enjoyed by those who at present are inadequately protected.

Benefits to Public.

The Life Underwriters' Association of Canada and the National Association of Life Underwriters of the United States both realize what it would mean to the public if the knowledge of life insurance, both as to its principles and benefits, was more widely diffused, and a campaign of educational publicity, including not only the institutions of learning, but the people generally, is now and will be part of their policy. The motto, "Better and Increased Service to the Public," is the slogan of the members of the Life Underwriters' Association of Canada.

HALIFAX EXPLOSION

The estimated value of property burned in the Halifax disaster on December 6th, 1917, was $2,000,000 with losses to fire insurance companies of $1,000,000. The plate glass insurance companies lost approximately $150,000 which is relatively greater than the fire insurance companies losses, when one considers the premium income. The Halifax fire was caused by the ramming of a munition ship in the harbor by a Belgian relief ship, and was the only conflagration of the past year.

INSURANCE NOTES AT RANDOM

Some Stories as to Selling Life Insurance—Employees of Insurance Companies Should Set Example

BY J. L. PURDY.

A successful business man volunteered the following story, describing how he was first induced to buy life insurance: "Do you know anything of astronomy, Mr. Smith?" the solicitor said, shaking my hand affably. "Not a particle," I replied, "and can't see that we need to." "Well," the solicitor said, "it is not exactly a long story, but shall we sit down?" and without knowing quite how or why, I found myself sitting down and gazing into an astronomical chart, consisting of the sun and stars of various magnitudes, which this most interesting fellow drew from his pocket. "Now, in relation to your own personal affairs, Mr. Smith, you occupy a similar position to that of the sun to the Solar system. You are the creative energy and sustaining power of the whole organization. Naturally, your chief and first concern is your home and family, and their dependence upon you and your resources is almost as complete as the earth's dependence upon the sun. The second in importance is probably your business interests, representing, no doubt, a pile of money, and, for all I know, producing twenty, thirty or forty thousand dollars a year. Then there is that portion of your estate consisting of investments, and it's a man's job, no doubt, to take care of them. And, lastly, there are other important matters not quite so tangible, but none the less real, which we will call the purposes of your life, the things you hope and expect to accomplish, failing which you would, perhaps, consider your career incomplete. Now, you must admit, Mr. Smith, that this is a formidable layout. See how all these matters revolve around and depend upon the central power, and that central power, sir, is you!" And then he stopped short as if to say, "It's your next move." I said, "insurance, eh?" "That is what the situation appears to demand," he replied. "When were you born?" and, jotting it down, he continued in his matter-of-fact way, "twenty-five thousand calls for an annual deposit of $1,000. Will you sign here?" I didn't see much astronomy about it at the finish, but completed the application all the same.

Now let me tell you a story, Mr. Smith, I said, showing how a friend of mine was persuaded to take his second policy of life insurance. Almost every eligible man, sooner or later, takes his first policy, but not all of them have the nerve to reach after a second. It happened in this way. A man entered my friend's office one day and exclaimed: "Mr. Jones, how are you? I am doing a little spade work this morning," and at the same time he presented a card of rather unusual size upon which was engraved the cryptic words, "One sum insurance is mostly a delusion." Now, my friend had carried a large policy of one sum insurance for a number of years, and the sentence on the card puzzled him not a little. At first he was just surprised and incredulous, then chagrined, and finally he burst into a tornado of remonstrance. But the solicitor stood firm, and, instead of replying to the argument, he simply pulled from his wallet a slip of paper upon which was typed the following: "Thirty-five per cent. of the country's widows are in want. Ninety per cent. lack the common comforts of life." Without comment he produced another which read as follows:—"The annual death rate of estates is over eight times that of individuals, and 90 per cent. of all estates are dissipated within seven years." And yet another as follows: "It is better to be sure than sorry."

Investments and Insurance.

Then, raising his finger, he said: "Mr. Jones, do these facts mean anything to you? What do I mean? Why, just this: Do they move you as the fire alarm of this building would if it were to ring at this moment? Of course, you have your investments nicely balanced; I presumed that. But you cannot be sure of having any investments when the call comes. The late Pierpont Morgan had as good a collection of investments as anybody could wish, but he considered them neither good enough nor secure enough for the purpose of perpetuating an income for the lady beneficiaries under his estate. Nothing but guaranteed monthly income would suffice; in other words, insurance that really insures. You would require to deposit but $900 a year to secure a continuous monthly income of $100 per month for the lifetime of your widow, and she would need that much at least. Will you look at the financial aspect of this proposition for a moment, and remember there are sixty millions of dollars behind it. This income would be paid for twenty years in any event, so that the minimum payable under the policy is $24,000, plus excess interest for twenty years, worth, perhaps, $2,000; total, $26,000.

"You are now aged 52. Your expectation of life is 19 years, and, making some slight allowance for the annual reductions of premium, it is evident that you would have to live another 30 years in order to pay by way of premium the minimum guaranteed under the policy, whereas if you had an early call, the company could easily be obligated to pay $50,000 or more under the terms of the contract." Mr. Smith listened patiently up to this point, and then enquired if he could get a policy of that kind himself. He could if eligible, but that could only be determined by medical examination. Mr. Smith signed, and when the policy was delivered he wanted to know what was to be done with his $25,000 one sum insurance. "Stay right with it, to be sure. It will prove as useful as a bank balance. Almost every man owes money when he dies, has obligations maturing which call for cash to protect equities, and, in any event, there are the succession duties to provide for, the burden of which is bound to increase before many years.

Example of Adequate Protection.

At the recent death of a highly respected and prominent insurance solicitor curiosity was naturally aroused as to the amount of insurance protection the deceased had carried, and it was gratifying to learn that it was in the neighborhood of $40,000. The value and influence of example as compared with empty precept is frequently urged upon the solicitor, and very properly so, because the hypocrisy of representing an institution which you do not yourself thoroughly believe in is always unsportsmanlike, and as applied to the insurance business, it is lamentable in the extreme. But what is sauce for the goose is also sauce for the gander, and the stricture applies equally to every officer and employee of a life insurance company or none at all. A striking and tragic example of the influence exercised upon the minds of some people by this very thing was brought to my attention not so long ago. I was soliciting a manufacturer who carried but a small line of insurance, and, although he recognized the force of the appeal and the virtue and necessity of protection, he could not eradicate from his mind the erroneous idea that there must be a nigger in the fence somewhere, because he said: "I know several directors of insurance companies and at least one life president, and the amount of insurance they carry is barely enough to satisfy the statutory requirements." The tragic side of this is that the gentleman in question lost his life on the ill-fated "Lusitania," and his family and estate are deprived of protection by the potent and, in this case, unfortunate influence of example. Every person connected with a life insurance company has a responsibility to the public for at least an example of adequate protection.

After a strenuous solicitation, my prospect, Mr. Robinson, replied, "I do not want insurance to-day. All I need now is a sales manager for my business, and the job is offered to you." This being about the twenty-first job that has been offered me at various times by prospects, I have evolved a stock reply something as follows:—"I am willing to put my fortune to the touch, Mr. Robinson, measuring the prospect of success in your business by the size of the application received from you. Will you sign here, please?" "No, sir; nothing doing in insurance, and do you mean to say that you decline to consider the proposition," he said, with an air of astonishment. "Indeed, I do," I replied; "but tell me, why are you so surprised?" "Well, I have known a good many insurance men in my time, but never one who was not glad to borrow a dollar, and a chance of this sort would have pleased most!" "Not so fast, my good man," I said, and going straight to my pocket, I pulled out a faggot of bills, which, on the theory that money attracts money, I carry around with me. At the sight of the bills Robinson began to purr, and said, "But surely you are not just the agent of the company; you must be the secretary-treasurer." And, glancing down at my spats and again at the notes, he was positive I must be the president, taking a little exercise. All attempts to dissuade him were futile, until, in desperation, I remembered my agent's license, but for which I might still have been masquerading in the borrowed splendor of a life president, and Robinson would not have been disillusioned

THE ONE NECESSITY WHICH HAS NOT INCREASED IN PRICE

(Though ever Increasing in Value)

No Advance in Premium Rates in 17 Years

Think of it! In spite of the fact that policies of to-day contain provisions undreamed of years ago. The liberality of The Manufacturers Life policies, with their high guarantees, cannot be surpassed. Remember that once a policy is issued to you, there can be no increase in premiums

Premium Rates are Actually Lower

on profit-bearing policies than a decade ago due to the large profit earnings of this progressive institution.

A Competence if you live; an Estate if you die

This is the function of Life Insurance. Either or both should be sufficient reason for your giving it serious consideration. Full particulars of our guaranteed plans on request.

The Manufacturers Life

INSURANCE COMPANY

HEAD OFFICE, TORONTO, CANADA

A Common Sense View of Life Insurance

No sensible person doubts the high VALUE of Life Insurance, but far too many look upon it as an Expense to be avoided as long as one may safely do so.

This is a wrong view altogether. Modern Life Insurance is not an expense, but an INVESTMENT. Under the Limited Payment Policies issued by The Great-West Life, the Policyholder is himself assured of excellent returns if he lives for a given period. If he dies meantime his heirs reap the benefit.

The Great-West Life Policies embody all the benefits of low premium rates, liberal conditions, and high profit returns to Policyholders.

Full particulars and rates will be gladly furnished on request.

WAS THE FIRE AN INCENDIARY ONE?

When Onus of Proof is Put on Assured, Fire Waste Will Be Reduced Considerably

BY A. H. C. CARSON.

During recent years much has been done to try and awaken the public conscience to a sense of responsibility for the losses occasioned by fires from strictly preventable causes. Fire marshals have been appointed by many provinces, and powers conferred upon them which are being exercised in a very thorough manner. Fire prevention associations are carrying on a splendid work and the field forces of the insurance companies by their personal inspections and recommendations are making every effort to reduce fire losses. In spite of all these efforts the losses still continue to amount in the aggregate to an alarming figure. This is the more to be condemned under the present conditions governing the food supplies of the world. In this country and in the neighboring union, food controllers are using the powers conferred upon them by their respective governments to reduce consumption, and so assist the allies in the prosecution of the war, but their efforts are being to a large extent, and unnecessarily, neutralized by the burning up of large quantities of supplies which are pressingly needed.

Our farmers are greatly to blame for this condition of affairs. In a country where lightning storms are so prevalent during certain months, adequate protection against the hazard which year after year is productive of so much loss, would look to be only proper prudence on the part of those whose property is most likely to be affected. Experience has shown that the equipping of buildings with a proper installation of lightning rods renders them to all intents and purposes immune from lightning damage, yet year after year hundreds of barns with their contents are destroyed from this cause alone. At any time such a waste of agricultural products is inexcusable, under present conditions it is not far removed from criminal.

Courts, Assured and Companies.

It is, to those engaged in the fire insurance business, a matter of wonder that our courts so frequently incline to favor the cause of the assured who has suffered a loss, as against the interests of the insurers. Fire insurance companies do not willingly take cases to the courts, for it is not in their interest to gain a reputation for themselves as being slow in payment of claims, or inclined to take advantage of legal technicalities, and it is only when they are convinced that the claim is not one, which in the interests of the community at large, should be acknowledged, that they ever leave the matter to legal arbitration, and it is disappointing to them that in so many cases their efforts to defeat what are undoubtedly fraudulent claims, should meet with so little success.

In such cases the companies are of necessity compelled to rely largely upon circumstantial evidence, for no man who starts an incendiary fire is likely to commit the crime in the presence of a witness, but in many cases circumstantial evidence is available which is conclusive as to the identity of the culprit. If such evidence is not admitted or does not carry weight, it follows that a conviction is impossible and a criminal much more dangerous to society at large than a common thief, is left free to pursue his evil courses. Nor does the trouble end here, for others seeing the ease with which such a crime can be committed, and the apparent immunity from punishment of the culprit, are encouraged to follow in his footsteps and the evil is a spreading one.

Onus of Proof.

Just so long as the companies are put in the position of having to prove that a fire was of improper origin, just so long will the fire waste continue to be of huge proportions. When the onus of proof is put on the assured and it will be necessary for him to prove that a fire was not caused by him or by his concurrence or by his carelessness, which should be considered as being almost equally culpable, then an impartial administration of the law would show results which would probably astonish those who seem to think our present fire waste is inevitable. That legislation on such drastic lines should ever be enacted in this country may seem far fetched, but when we see the greatest democracy in the world adopting conscription, and the law being cheerfully and willingly obeyed, it is hard to put a limit on what will be done regarding a matter which concerns so nearly, not only our national wealth, but our national honor, under the stress of stern necessity.

Much may be done by education, and the constant iteration of an obvious fact will undoubtedly in time cause it to be impressed upon the public mind. The slogan "Safety First" will sooner or later largely reduce the number of preventable accidents. If it could be as widely made known that fires help the enemy by weakening the resources of this country, possibly they would not be as common as they are.

Carelessness Causes Many Fires.

To those not actively engaged in the insurance business, it would seem incredible if they knew the number of losses occasioned through such causes as "ashes deposited in wooden boxes," "oily waste left carelessly lying around," "electric wires hung on nails," and other instances of extreme carelessness of a similar nature.

It is surely time that the attitude of easy tolerance of the public towards those suffering from fire loss to their property should cease, and that it should be recognized that any person whose property is destroyed from causes which are easily preventable, should be looked upon as an enemy to society at large, and dealt with as such.

If this matter is taken up by the insurance companies only, it is to be feared that little good will be accomplished for the general attitude will likely be that any such action was dictated from selfish motives only. It is to be hoped, therefore, that leaders of thought in the Dominion can be induced to give this important subject serious consideration and initiate action which will produce beneficial results.

FUNDAMENTALS OF A BOND OF SURETYSHIP

Basis for Its Best Moral Influence and Protection to the Community

By HENRY E. RAWLINGS.

The fundamentals of a bond of suretyship issued by a guarantee company on behalf of an officer or employee occupying a position of trust are service and indemnity, that is, service to the employer by a system of investigation and revision of risks for the prevention of loss through an unfaithful officer or employee and assured indemnity in the event of confidence being breached. The assurance of the indemnity, obviously, depends upon the circumstances of the loss, the merits of the claim and the policy of the guarantee company. The indemnity available, however, under a bond of suretyship extends only to the amounts dishonestly appropriated and not to the disbursements made by the employer in the investigation of the loss and other expenses and inconvenience to his business.

Investigation and Revision of Risks.

The feature, therefore, of the investigation and revision of risks, with its attending moral influence, tending towards the prevention of defalcations, is of paramount importance to the employer availing of the protection afforded him under a bond of suretyship. Such service or protection depends, however, upon the investigation department and the organization of the guarantee company and the keenness and the observances of its inspectors, who, by their experience and training, are impressed with the necessity of taking nothing for granted and confirming, as fully as practicable, the accuracy of all statements and replies received in the course of their investigations, for it is not infrequently developed that friends of an applicant or one occupying a position of trust under bond have, through motives of personal sympathy and "hopes for the better," suppressed with some degree of success information of a weakness in his character, record or habits in the mistaken idea that they are thereby doing him a good turn under the erroneous impression that otherwise his bond would be cancelled, not appreciating that the action of the guarantee company would only be such as to adopt some expedient measure of protection to himself and his employer, whereby there might be nipped in the bud a possible large defalcation, with its attending notoriety and penalty to the defaulter and ensuing embarrassment to his relations, proof of which is borne out, in the handling of discovered

defalcations, by the vast amount of voluntary information obtainable from these same, sympathetic friends when it is too late to be of any use.

Undoubtedly, the incumbent of a position of trust, hovering on the brink of misusing the confidence reposed in him, before yielding to the temptation, either through a dishonest inclination or a temporary situation of necessity will be influenced by deterring visions as to what disposition the guarantee company will make of his defalcation when discovered; the basis, however, for the most forceful and best moral influence and its most beneficial effect under a bond of suretyship lies in the knowledge of the average officer or employee that it behooves him to conduct himself in accordance with his position and means, otherwise that information as to his habits or mode of living, detrimental to the best interests of himself, his employer or the community, will be promptly conveyed to the guarantee company and its endorsement thereby possibly prejudiced if not, indeed, forfeited.

DIAGNOSIS OF FIRE WASTE

Need for Accurate Statistical Records in the Provinces—Licenses Issued

By E. P. HEATON.

We have been accustomed for years past to speak in general terms of the amount of our fire waste, to mention in round figures what we believe it to amount to and what the per capita share was our people had to assume, from all of which we have reached the unwelcome deduction that the province of Ontario has achieved an unenviable reputation.

Yet, we have only been guessing, and in the absence of data our guessing has been shorn of all value. I have several times commended *The Monetary Times* for its monthly and annual statements of our Dominion fire waste; this has been our only source of information, but it must be manifest that this paper is neither in possession of nor has it the means of obtaining full or accurate statistics. To us in the province of Ontario its value is minimized because it has not attempted to analyze the fire waste by provinces. Nevertheless all honor to *The Monetary Times* for its pioneer work.

Difference in Estimates.

To illustrate how far we fall short of accuracy in our previous guessing, let me quote the annual estimate of *The Monetary Times Annual* of 1917 (page 167), which gives the yearly fire waste of the Dominion for 1916 at $20,487,500, or a per capita loss of 2.56. We now learn for the first time in our history from the Federal Blue Book that the fire losses incurred in Canada by companies licensed by the Dominion superintendent of insurance in 1916 amounted to $17,044,369. When to this is added the losses incurred by companies licensed locally by the provinces, the losses by unlicensed insurance companies and lastly the proportion of losses sustained by the owners and by the uninsured, the question arises how far will this $3,000,000 difference go in covering these items? Manifestly it is not near the mark.

But let us come a little closer. From the undigested reports in my office, I "guessed" early in 1917 that the fire waste of Ontario in 1916 was $12,000,000—which was startling if not almost unbelievable. During the year we have digested the reports and I am now in a position to state authoritatively that the actual fire waste of Ontario in 1916 was a little short of $15,000,000, or $6 per capita!

The following analysis will not only be found supporting evidence but will present the matter in an interesting light:—

Losses in Ontario incurred by—	
Dominion licensees	$ 7,367,395
Ontario registered companies	1,392,656
Unlicensed companies as registered with this office	1,547,199
Northern Ontario conflagration (properties uninsured and excluding standing timber)	1,088,764
Parliament buildings, Ottawa	1,500,000
Add 20 per cent. on insurance losses for difference between assured's loss and amount paid by insurance companies, ($10,307,250)	2,000,000
Ontario fire waste, 1916	$14,896,014

I may be asked why do you figure 20 per cent. over the actual losses incurred as the portion born by the assured and the non-assured, and our answer is found in our carefully compiled statistics as published in the Public Service Bulletin each month. For the eight months of 1917 (January to September inclusive—see October Bulletin), the gross loss was $7,705,688, the insurance loss was $5,752,913, and the assureds' loss was $1,952,775 or 34 per cent. of the insurance loss. It is fair to assume that 1916 was in no real sense different from 1917, except as to the two serious fires I mention specifically, and I think the reasonable estimate of 20 per cent. will not be seriously challenged—if anything it is less than it should be.

In view of these considerations, is it any wonder that the energy of our office has been devoted very largely, since its inception, in getting together the machinery and equipment for a real and accurate diagnosis of the terrible drain on the province as just indicated. Before we can begin to consider preventive measures we must know how, when, and where, this fire waste evil arises, and each month now is adding to the sum total of our knowledge and experience. The statement we are publishing each month in the Public Service Bulletin (free on application to the King's Printer, Parliament Buildings, Toronto), will enable us to put our finger on any town, township, county or district which has any marked symptom of trouble or weakness; to learn of any particular class of business which is contributing unduly to our fire waste and lastly, to any particular cause which is brought into prominence.

This is what I mean by a diagnosis of our fire waste. It is in the making; and as the nurse's charts indicate to the physician a continuous history of her patient, so our monthly statements will present the full symptoms of the evil we are seeking to minimize. We can only prevent the preventable when we know with certainty the how and the why of that which we seek to prevent, and our effort to reach this point is justified at any cost of time and trouble.

FARMERS AND LIFE INSURANCE

In Canada They are Becoming Larger Purchasers—Protection and Investment

By P. A. WINTEMUTE.

The progressive farmer of to-day is learning that it does not pay to put all his eggs in one basket. Whille we still have the exclusive wheat grower, who, by the way, is the biggest gambler in our country, we find a big tendency to take up mixed farming. These men know that all their stock does not mature and the market is not always at top, and as a result they are looking with great favor on life insurance, not only for the protection provided, but as an investment as well.

The results of maturing policies are most gratifying and satisfactory, and in cases where policies have matured, if it happens that the neighbor has never bought, the insured is not only better off in the amount of the matured policy, but he invariably is better off in other respects, that is as to his other holdings, including buildings. It always seems that the investment in the life insurance policy has encouraged thrift, and no doubt the holding of the same has often given him a feeling of extra security, and thus enabled him to successfully extend his operations, which otherwise might have been limited.

No Discrimination in Insurance.

Farmers are learning to co-operate. In fact, in the Grain Growers, Limited, we have the foundation of what, no doubt, will be the largest co-operative society in Canada. The life insurance companies to-day, with their similarity of plans and rates, while engaged in a competitive business, are really co-operating to the end that protection may be provided for all, and the outstanding feature is the fact that the science of old line life insurance is mathematically correct, and is the essence of the gospel of a square deal.

There is certainly great satisfaction in knowing that no other man at one's age, health and family history, of course, being equal, can secure a policy of life insurance which another may not have; nor can any man secure, say, a $100,000 policy for one cent less per thousand than one

Profits Exceed Estimates

That's a rather startling statement for a Life Insurance Company to make, isn't it? It's a fact, nevertheless, and it has proven a mighty satisfactory statement both for the Company's representatives and for Policyholders.

Profit Results under present rates were, during 1917, on the average 50% greater than the estimates originally quoted. Anyone familiar with the conditions now and fifteen or more years ago will realize that this Company was dealing fairly with the public then and is now.

Would you not consider your insurance investments safe with such a Company?

who can only afford to purchase $1,000. This absolute equity of the business appeals to the farmer.

In this time of soaring prices for all commodities, the fact that the premiums on life insurance policies are continuing as before is another feature of the business that inclines farmers to think more seriously of the same.

The editors of the leading farm journals are advising their subscribers to buy at least enough life insurance to cover immediate liabilities, and also to use a portion of their surplus to the purchasing of investment policies.

The farmer is buying more life insurance to-day, because he is becoming educated to the benefits of the same, and to this end the advertisements of most of our companies are playing a great part, the need for life insurance, rather than comparisons of business in force and assets, being the outstanding feature.

Then, too, the farmer is being approached by insurance salesmen in a businesslike manner, making it a purely business proposition, sentiment being in most cases entirely eliminated. With the improvement in the calibre of the men engaged in the selling of insurance to farmers, I predict an ever-increasing volume being purchased by them.

REVIEW OF INSURANCE LEGISLATION

Summary of Acts Passed at Last Session of Dominion Parliament

During the last session of the Dominion parliament very important legislation affecting insurance companies transacting business in Canada was passed.

The Insurance Act, 1917, was assented to on September 20th last, and is now law, the Insurance Act, 1910, having been repealed.

An act to amend the criminal code (respecting insurance) was assented to on the same date. This act contains in substance the penalty provisions of the Insurance Act, 1910, being sections 70, 71, 72 and 73 of the said act. It also includes in substance the provisions of sub-section (1) of section 83, and sections 84, 127 and 128 of the Insurance Act, 1917, respecting rebating in all classes of insurance.

During that session acts were passed extending the time within which the following companies may obtain a license: The Canada Preferred Insurance Company, the Empire Life Insurance Company of Canada, the Western Canada Accident and Guarantee Insurance Company and the Western Life Assurance Company of Canada.

Alliance Nationale Act.

The following acts relating to insurance companies were also assented to during the recent session:—

(1) An act to incorporate Alliance Nationale. The act incorporates the association with power to take over the assets and to assume the liabilities of a provincial association incorporated by the statutes of Quebec of the same name, and authorizes it to grant to its members certain insurance benefits—viz., an accident and sickness benefit not exceeding ten dollars per week nor to be payable for more than twenty-six weeks in any consecutive twelve months; a funeral benefit not exceeding one hundred dollars; a death benefit or death and disability benefit combined not to exceed five thousand dollars; and an annuity not exceeding three hundred dollars per annum. Separate accounts and funds are required to be maintained in respect of these classes of benefits and also in respect of infantile insurance benefits. The association is required to maintain reserves on the basis of such tables of mortality, sickness and disability as are, in the opinion of the superintendent of insurance, appropriate and at a rate of interest not exceeding four per cent. per annum. An annual valuation and certificate by an actuary is required to be filed, the word "actuary" being defined to mean an actuary resident in Canada and being a Fellow of the Institute of Actuaries of Great Britain or the Faculty of Actuaries of Scotland or the Actuarial Society of America. The investments of the association are restricted to government, municipal securities, Fabrique loans, real estate mortgages, such real estate as is necessary for the use of the association and loans on the association's policies of insurance.

(2) An act respecting the Canadian Order of the Woodmen of the World. The act permits the order to place to the credit of the reserve fund the moneys accumulated in the emergency fund, in pursuance of the provisions of section 7 of its act of incorporation. The act also changes the date of the annual meeting of the head camp.

(3) An act to amend the act incorporating the Canadian Surety Company. This act authorizes the company to transact the business of automobile, accident, sickness and fire insurance in addition to the business of guarantee, burglary and plate glass insurance for which it is already licensed.

Guardian Accident and Guarantee.

(4) An act respecting the Guardian Accident and Guarantee Company and to change its name to the Guardian Insurance Company of Canada. This act, in addition to changing the name of the company, authorizes it to transact accident, sickness, burglary, plate glass, automobile, fire and guarantee insurance (other than guaranteeing the sufficiency or repayment of any mortgage, debenture or other security for any loan).

(5) An act to incorporate the North American Accident Insurance Company. This act provides that the company may acquire the assets and assume the liabilities of the North American Accident Insurance Company, incorporated by letters patent under the Ontario Companies Act, December 12, 1912, and gives the company power to transact the business of accident, sickness, plate glass, burglary, automobile, fire and guarantee insurance.

Security Life Company.

(6) An act respecting the Security Life Insurance Company of Canada. This company, having reinsured all its participating policies with the Sun Life Assurance Company of Canada and having decided to confine its business hereafter to the issue of non-participating policies only, has no policyholders eligible under the insurance act for election to the board of directors. The effect of this is to limit the number of the company's directors to nine, while a company issuing both participating and non-participating policies is permitted to have fifteen directors. The act, therefore, provides that after the sanctioning of the reinsurance agreement, by the treasury board, the company may provide by by-law that shareholders' directors to a number not exceeding fifteen may be elected, but that such by-law shall have effect only so long as the company has no participating policies in force. The reinsurance agreement was sanctioned by the treasury board on July 26, 1917.

Quebec Fraternal Society.

(7) An act to incorporate La Societe des Artisans Canadiens Francais. This act incorporates a provincial fraternal benefit society of the same name incorporated under the statutes of Quebec with power to take over the assets and to assume the liabilities of the provincial society. The society is authorized to grant to its members the following insurance benefits—viz., an accident and sickness benefit not exceeding ten dollars per week nor to be payable for more than twenty-six weeks in any consecutive twelve months; a death benefit or death and disability benefit combined not to exceed five thousand dollars; and an annuity not exceeding three hundred dollars per annum. Separate accounts and funds are required to be maintained in respect of these classes of benefits and also in respect of infantile insurance benefits. The society is required to maintain reserves on the basis of such tables of mortality, sickness and disability as are, in the opinion of the superintendent of insurance, appropriate, and at a rate of interest not exceeding four per cent. per annum. An annual valuation and certificate by an actuary, is required to be filed, the word "actuary" being defined to mean an actuary resident in Canada and being a Fellow of the Institute of Actuaries of Great Britain or the Faculty of Actuaries of Scotland or the Actuarial Society of America. The investments of the society are restricted to government and municipal securities, Fabrique loans, real estate mortgages, such real estate as is necessary for the use of the society and loans on the society's policies of insurance.

In British Columbia.

No amendments to the various insurance acts in force in British Columbia were passed at the session held last year. The only matter in which the insurance companies are affected by last year's legislation is in respect of taxation. Insurance companies other than fire insurance companies have now to pay: (a) for 1917 a surtax of one per cent. upon their gross revenue, and (b) after 1917 the rate of taxation under the

taxation act is increased to two per cent. instead of one on the gross revenue.

Fire insurance companies still pay two per cent. on their gross premiums in the province under the fire insurance act, and so far as other gross revenue is concerned are in the same position as other insurance companies.

Ontario, Nova Scotia and Manitoba.

There were no changes of any moment made in the Ontario insurance act at the last session of the provincial legislature.

At the 1917 session of the Nova Scotia legislature there was no legislation affecting insurance except chapter 58, entitled "An Act to Amend Chapter 13, Acts of 1912, entitled 'An Act to Supplement the Revenues of the Crown in the Province of Nova Scotia.' " Chapter 58 merely provides for the payment of interest on taxes that are not paid within a certain time. At the 1916 session of the legislature the only legislation affecting insurance was chapter 16, entitled "An Act to Amend Chapter 15, Acts of 1903, entitled 'An Act respecting Life and Accident Insurance' and Acts in amendment thereof."

Two acts were assented to on March 9th, 1917, in Manitoba—namely, "An Act for the Prevention and Suppression of Fires" and "An Act respecting Hail Insurance Contracts and Uniform Conditions of Hail Insurance Policies."

Beneficiaries in Alberta.

The following sub-section was added to section 7 of the Life Insurance Beneficiaries Act of Alberta last year:—

"(3) Such a person may from time to time borrow from the insurer on the security of the contract such sums as may be necessary to keep it in force and the same shall be so applied, and on such terms and conditions as may be agreed upon; and the sums so borrowed with such interest as may be agreed on, shall be a first lien on the contract and on all moneys payable thereunder."

STANDARD LIFE INSURANCE

It Immediately Creates an Estate and is a Good and Safe Investment

By C. WETMORE MERRITT.

What is the greatest material thing in this world? My answer is: "Standard Life Insurance."

Why is standard life insurance the greatest material thing? Because it is compulsory thrift for those who are indifferent about saving.

It immediately creates an estate for the insured. It provides protection for loved ones and business, while in course of process of becoming an adequate competency. It is excellent collateral for business and banking purposes. It provides a fund for old age, which keeps the insured when in declining years from being a charge upon his or her friends, or the state.

It is a good and absolutely safe investment. It provides education so that the individual can walk on a comparatively easy pathway through life. It makes the insured feel safer, happier and more comfortable.

When the possessor of a standard life insurance policy has had it for three years, and he cannot borrow money elsewhere, he can always make a loan against his policy at a low rate of interest.

It provides an income in case of disability, either physically or mentally. It savors of good from every viewpoint.

What is there then, that will compare favorably with it, with its many attractions and benefits, and without a flaw?

Of approximately 2,000,000 buildings in Canada, less than one-tenth of one per cent. have been built with proper consideration of safety from fire. In the cities and towns from which statistics are available, almost 70 per cent. of the construction is frame. The vast majority of brick buildings are structurally defective and inadequately protected, and only one in every 1,200 is even nominally fireproof. These are figures of the Commission of Conservation, Ottawa.

FIRE INSURANCE DOES NOT ELIMINATE LOSS

It Merely Distributes the Loss—Carelessness and Fire Waste

BY ALFRED WRIGHT.

It is at all times important that a country or community conserve its created wealth and its natural resources, and not allow them to be dissipated by fire, or, in other words, "Go up in smoke," but in the present time of scarcity, and in the midst of our struggle to preserve the liberties of mankind, it is especially necessary that there shall be no preventable waste.

An examination of the monthly reports of losses by fire, both in the United States and in Canada, seems to show that the ratio of destruction of property by fire in relation to the total value is not decreasing as it should in spite of some improvement in construction and considerable improvement in means of protection, more particularly through the increased number of sprinkler equipments which have been installed.

Fire Destruction Keeps Pace.

I have no available statistics to determine the growth in Canada in value of buildings and merchandise or produce stored from year to year, but, granted that values have increased, I fear that the destruction by fire has kept equal pace. Much of this destruction is due to causes which are quite preventable. It is an old saying, but nevertheless true, that "Prevention is better than cure;" but we spend very little thought on prevention and a great deal of money on fire-fighting appliances. We have to, or our cities and towns would all burn up.

The United States and Canada have probably the best, and certainly the most expensive equipments for extinguishing fires that can be found throughout the world. Why, then, is it that the destruction of property by fire on the North American continent is greater than in other parts of the world, and what are we going to do about it?

The heavy fire waste on this continent is due to many causes—some of them beyond our control, such as climatic conditions, but undoubtedly a large proportion of the losses by fire in Canada are attributable to causes that are not uncontrollable.

Insurance and Losses.

In some quarters the business of fire insurance has been blamed for a good part of the losses, and it is true that if there were no such thing as insurance against loss by fire, there would not be so many fires; but commerce cannot be carried on without fire insurance, and it only remains to surround the business with such safeguards as may be found practicable.

In my opinion, the principal cause of fire is carelessness on the part of the public, because it is not generally appreciated that the destruction of property by fire is a loss to the community that can only be replaced by the expenditure of labor.

The thoughtless attitude prevalent with the newspapers in reporting fires contributes to this idea. For instance, in an account of a fire in the daily papers the reporter usually describes the fire as "spectacular," and states that it "required the utmost efforts of the police to control the onlookers, who occupied every 'coign of vantage,' from interfering with the firemen, whose heroic work alone prevented an extensive conflagration." This is bad enough so far, but when the reporter winds up with the statement that the "loss is fully covered by insurance," he unwittingly creates a false impression. The fact that there was insurance does not eliminate the loss, but merely distributes it.

State of Public Opinion.

Another important factor that tends to increase the fire waste is the state of public opinion. It is not considered derogatory to the standing in a community of any citizen to have had anywhere from two to half a dozen fires where the origin is unknown, or, if known, has been shown to have been due to gross carelessness. The only comment made by his friends is an extension of commiseration, if he has no

insurance, or congratulations if he is "fully covered." No thought is given to the fact that the fire might have spread, with consequent injury to other parties.

Public carelessness affects the construction of buildings. Proper building regulations are not enforced; careless workmanship is passed over; electric installations are often defective; and, while provision is made for inspection of premises, the strict requirements are often waived from motives of policy.

To Reduce Fire Waste.

Until a better public opinion prevails in regard to losses and more care is exercised generally, there cannot be any diminution in our fire waste, but it is encouraging to note that of late years the subject is receiving a great deal of attention from public-spirited men, not necessarily connected with fire insurance companies. The business of insurance officials is primarily to charge rates to cover the hazard undertaken, although to their credit be it said that they have given much attention to the work of improving conditions in cities and towns with a view to reducing the fire waste.

It appears to me that the only hope of ameliorating the situation is by educational methods, and a good deal is being done in that direction. Children should be taught by their parents to be careful, but if the parents themselves are careless, their influence would be ineffective in this respect, and it is, therefore, necessary that careful habits should be inculcated in the children through public school education. A great deal of time and effort is now being spent by various associations to impress upon the public the necessity for conservation of our resources, and no doubt in time these efforts will bear fruit.

UNLICENSED FIRE INSURANCE

Volume Has Increased 11 Per Cent. and Now Totals $262,000,000

In a statement submitted to the Ontario government fire insurance inquiry in October, 1916 (an inquiry which was continued last year), the Canadian Fire Underwriters' Association were strong in their denunciation of unlicensed insurance: "The business of fire insurance is carried on by the licensed companies in the face of absolutely unfair competition," said the statement. "Competition in itself cannot be objected to, and is, in fact, desirable, but this association, speaking as it is entitled to do for fire insurance interests generally protests against the inefficiency of any existing legislation in protecting these companies which are licensed and have their offices in this country against companies which have no license; have no deposits or other funds in Canada; pay no taxes; have no office or office staffs, and consequently disburse the considerable sums that go to form the expenses of the business entirely for the benefit of residents of foreign countries. Such companies, even if sound (and they frequently are not), can obviously afford to cut the rates which the companies here have had all the expenses, by inspection and otherwise, of making. The permission given, therefore, for any insurer who can get a lower rate from an unlicensed company to place his business with such a company without paying any taxes, or if he employs a broker, on the payment of a tax of $1, is quite unfair. The change recently made which requires 1 per cent. of any loss in an unlicensed company to be paid to the fire marshal, beside being unjust in principle in taxing only the man who has a loan and is less able to afford it, is quite ineffective. What the association contends is required is that prompt publicity should be given to all transactions effected with unlicensed companies, either by the assured or his agent, and that a substantial tax should be collected on all premiums paid to these companies."

Heavy Unlicensed Insurance.

Despite these considerations, a large amount of this business is written in Canada. The following is an official analysis and summary of the statements of fire insurance carried on property in Canada by fire insurance companies, associations or underwriters not licensed to transact business in Canada in 1915 and 1916:—

Province in which property is situated.	Amount of insurance, 1915.	Amount of insurance, 1916.
Nova Scotia	$ 5,713,674	$ 6,415,987
New Brunswick	10,733,775	8,671,915
Quebec	76,907,525	95,970,370
Ontario	103,645,877	112,252,434
Manitoba	9,462,290	11,516,133
Saskatchewan	9,030,304	8,679,496
Alberta	6,723,638	6,145,890
British Columbia	13,196,664	12,710,055
Prince Edward Island	16,850	24,302
Yukon	340,000	417,300
	$235,770,597	$262,803,882

Nature of property insured.	Amount of insurance, 1915.	Amount of insurance, 1916.
Lumber and lumber mills	$ 15,488,299	$ 15,893,068
Other industrial plants and mercantile establishments	154,450,371	185,548,910
Stock and merchandise	40,649,711	36,499,877
Railway property and equipment	24,896,076	24,055,737
Miscellaneous	286,140	806,290
	$235,770,597	$262,803,882

Nature of insurers.	Amount of insurance, 1915.	Amount of insurance, 1916.
Lloyds' Association	$ 63,188,168	$ 55,864,594
Reciprocal underwriters	22,109,561	28,574,461
Mutual companies	119,174,939	135,548,458
Stock companies	31,297,929	42,816,369
	$235,770,597	$262,803,882

Law Allows It.

Unfortunately, the Canadian insurance act allows "outlaw" insurance to be written. This business is carried on under section 139 of the insurance act, 1910, which reads as follows:—

"Notwithstanding anything in this act contained, any person may insure his property, or any property in which he has an insurable interest, situated in Canada with any British or foreign unlicensed insurance company, or underwriters, and may also insure with persons who reciprocally insure for protection only and not for profit; and any property insured or to be insured under the provisions of this section may be inspected, and any loss incurred in respect thereof adjusted: provided such insurance is effected outside of Canada, and without any solicitation whatsoever, directly or indirectly, on the part of such company, underwriters or persons by which or whom the insurance is made; and provided further that no such company, underwriters or persons shall within Canada advertise their business in any newspaper or other publication or by circular, mailed in Canada or elsewhere, or maintain an office or agency therein for the receipt of applications or the transaction of any act, matter or thing relating in any way to their said business."

RECORD LIFE INSURANCE POLICIES LAST YEAR

The largest life policy ever issued on a single life was written by Mr. Harold Peirce, general agent at Philadelphia of the New York Life. The policy was for $2,500,000 on the life of the United States financier, Mr. J. P. Morgan. One object of Mr. Morgan in taking this policy was to provide an offset to the inheritance taxes to which his estate will be subjected. Payment was so arranged that either the State or federal treasury, or both, will receive the net amount of the policy.

The New York Life issued the Morgan policy of $2,500,000, that company taking a half million and distributing the balance through reinsurance. All those Canadian companies which desired participated in this business.

Another large policy last year was that of $2,000,000 on the life of H. P. Davison, of the Morgan firm. Canadian life insurance companies also carry part of this risk.

The largest policy written on the life of a Canadian last year was $1,500,000 on Sir Mortimer B. Davis, president of the Imperial Tobacco Company of Canada, Montreal. The New York Life placed this policy through their agent, Mr. H. B. Rosen. Canadian companies obtained all they desired of this business.

FIXING VALUES FOR LIFE COMPANIES

Practice of Dominion Insurance Department Questioned—Value of Life Insurance

BY J. K. MACDONALD.

Life insurance has come to be used to such an extent as a protection for the family and in undertakings where the life of the individual has an important bearing upon the success of an enterprise that little need be said in commending it as being probably the best available way to make provision for the contingencies to which human life and human affairs are liable.

There is no human certainty as to the duration of any individual life, a fact that is abundantly proved by the personal experience of every human being. Actuarial investigations, however, have fixed with great accuracy the number of lives that die out of a given number and class in each year of life; consequently, there can be no certainty that a father may live long enough to make provision for his wife and children, or that the wisest plans in connection with a business enterprise, more or less dependent upon the life of an individual, will mature as planned. In life insurance a means is found by which the husband may provide for his wife and children should he be called away by death; or for a provision for the time that comes to every man when he will no longer be able to endure the strain of life's activities. Likewise, the man who enters into business relationship with others, in which his capital in the venture means success, while the withdrawal of it in the event of his death would possibly mean failure, is also enabled through life insurance to provide, as far as human means can do so, for such a contingency.

Growth of Life Insurance.

In view of the adaptability of life insurance to meet the needs of our social life, there is little cause to wonder that it has been availed of to such an extraordinary extent, indicated by its wonderful growth during the last forty years in Canada alone. At the close of the year 1875 the total life insurance in force was $85,009,264; at the close of 1916 it was $1,422,176,632.

Another reason why life insurance has attained worldwide appreciation is the fact of the absolute security it affords, resting as it does on well-proved scientific principles, which make it absolutely safe. With a correct mortality table and a safe rate of interest used in the compilation of premium rates, and in the calculation of reserve liabilities under policies and annuities granted, together with capable and honest management, nothing human can be more, if even so, secure.

With regard to a table of mortality, extended actuarial investigations of the mortality results experienced by life insurance companies, both in Great Britain and in America, covering many years of exposure and involving an enormous number of lives, have led to the formation of several safe tables of mortality.

Importance of Interest Rate.

As to the rate of interest to be used, there must always be kept in view the fact that life insurance contracts run in every case through a period of years, and in the majority of cases through a long period of years; therefore, the rate of interest assumed must always be well within the rate which can, even with safety, be counted on for many years to come. The value of interest in life insurance earnings and valuations was well expressed by that famous actuarial veteran of Massachusetts, the late Honorable Elizur Wright: "The rate of interest earned makes a life or death difference to the company." The large accumulation of funds which takes place from year to year arises from the setting aside of sums necessary to meet future obligations in connection with liabilities under policy and annuity obligations. This calls for careful investment, and should always yield a rate of interest at least one-half to one per cent. higher than the rate used in the calculation of the reserves.

"Safety first" must always be the guiding principle in life insurance. The element of speculation in investments should be strictly avoided. So much is life insurance looked upon as a sacred trust that in this country and in many other countries it is hedged about by legislative safeguards such as are not applied to other financial institutions.

Our own Federal parliament has passed carefully considered legislation in regard to the kind of securities in which life insurance companies may invest their funds. Speaking generally, they may invest, to a certain extent, in real estate connected with their head office and branch offices, including properties falling into the hands of companies through mortgage investments foreclosed. They may also lend on first mortgages limited to not more than 60 per cent. of the value, as well as on the company's own policies, and invest in government bonds and stocks, municipal debentures, debentures of industrial concerns, with certain limitations, bank stocks, and some other stocks.

In making investments on mortgage security care and experience are important factors; and even with these it is not always possible to avoid some loss, especially when exceptional conditions prevail, such as were experienced in Toronto and elsewhere some thirty years ago, when values in many instances fell below 50 per cent. of what was supposed to be a careful valuation made during boom times. Present conditions, notably in the West, afford a striking example of what may happen in the way of recession in values of realty. There the natural reaction from speculative values is aggravated by the effect of conditions caused by war, and, consequently, the reaction is correspondingly greater. With due care in the making of loans and judicious management of properties falling into the hands of the loaning companies, any loss may be greatly minimized, though in some instances delay will almost certainly be experienced in the collection of interest and instalments of principal. One of the chief hindrances to collections in the West arises from legislative enactments of moratorium, military and home defence character, which enable the debtor who does not want to pay an easy way of escape, holding his creditor in defiance, regardless of justice. It is quite reasonable—indeed, proper—that a measure of safeguarding the mortgagor and other debtor should be enacted in view of existing conditions, under which it is quite possible that instances of great hardship might be caused; but it would seem fair that the protection should not be altogether on behalf of the debtor.

Suggestions for Ottawa.

With regard to debentures and stocks, it may be explained that debentures are usually purchased, subject to the sufficiency of security, with reference to the rate of interest they will yield on the price paid, and for that reason the purchase price may be par, or above or under par. In cases where the purchase is made at a price above par, the difference between par and the price paid is written off in yearly proportions, according to the number of years for which the debentures run. Similarly, where they have been purchased at a price below par, the difference is written off so that when they become due they stand in the books of the company at par. Stocks, unless there should be good reason for doing so, remain in the books at cost. These two kinds of securities differ in that the debenture has a fixed date at which the debt matures, while the stocks have no date at which maturity takes place, and, consequently, debentures are supposed to have a slight appreciable value as a security over stocks.

A feature in connection with these securities under the system of fixing values, heretofore employed by the insurance department, may be worth a reference. The practice has been to take their market price on a given day, and use this as the measure of the value of the class of securities included in the balance sheet of the company. The question may fairly be asked, Does this mode of reaching the value of such assets do justice to the companies or arrive at the true value? Conditions may prevail at the time that will so depress the market on the particular date at which the price is ascertained as to affect seriously their apparent value, while the real value as holding securities is not changed, nor is the interest return less. It must be remembered that while it would probably give the full price if thrown on the market on that particular day, yet no life insurance company needs, or even thinks of doing this. These securities have been purchased because they are of long date, bearing a rate of interest return usually from 1½ to 2½ per cent. higher than the rate used in calculating reserves. The writer has known of instances where, within a few months, the "write down" in consequence of the valuation could be "written up" again on the basis of market prices. This feature might well have consideration with a view to a change.

METHOD OF USING BOURNE'S INSURANCE AND BROKERS' DAYS CHART

1. To find the number of days between two dates not more than a year apart—15 July, 1917, and 24 November, 1917. In this case 24, in the second date, is *9 more* than 15 in the first date. Find July in the top line and November in the same column. On the same line with November, and in the column headed 9 days difference, we find 132. The exact number of days from 15 July to 15 November is shown in the column "Days in exact months," on the same line with November, which appears in the column headed July. It is 123 days. As the difference between the days is 9 days more, this will give 132 as the number of days between the two dates as before. If the two dates are 15 July, 1917, and 6 November, 1917, 6 is *9 less* than 15, and the difference 114 days, between the two dates, is found in the same square and above 132, corresponding to 9 days more.

2. To find a date a required number of days in advance of a selected date. For example, find the date 93 days after 15 June. Follow down the two columns headed "June" and "Days in exact months" simultaneously until a month (September) is found with a number of days (in this case 92) near to the given number of days 93. To the right of 92, 93 is found in the column headed 1 day, and as 93 is the lower of the two numbers in the square containing it, the 1 day represents 1 day more by which the 15 of the given date is to be increased. The required date is therefore 16 September.

The column headed 30 will always show the lines on which 93 will appear, because on those lines it will fall between a greater and a smaller number contained in the same square. Sometimes it may appear as if there were two solutions to the question, but when the number of days in the given date is increased or diminished, as the case may be, by the difference in days at the head of the column, it will give in one of the two cases an impossible result for the day of the month.

TO SELL LIFE INSURANCE

Character Reading as Applied to Salesmanship—Results of Suggestion to Prospects

BY W. S. NEWMAN.

Thousands of addresses have been delivered and countless reams of paper written on the subject of life insurance salesmanship. New theories have been advanced and old arguments and appeals re-clothed and presented for the benefit of the ambitious and aspiring salesman. These he can read with interest and digest with profit, for they are nearly all good. Most of these theories, arguments, and appeals are for the purpose of emphasizing and encouraging those qualifications which are absolutely essential to success and which might be called the axioms of salesmanship, such as the following: honesty of purpose; confidence in oneself and the article one is selling; optimism, grit and perseverance; and a complete grasp of one's subject, and a clear and convincing manner of presenting it.

Power of Character Reading.

These qualifications are indispensable, but there is another qualification which outweighs any or all of them. It is really the keynote of salesmanship, without which no life insurance underwriter is successful. In fact his success is always commensurate with the development of this gift. I refer to the power of character reading, or in other words the sympathetic grasp and understanding of human nature.

Roughly speaking, salesmen are divided into two classes. There is the aggressive salesman whose success is due to his driving power and who absolutely dominates his prospect, consciously or unconsciously, by sheer force of will and personality, forcing him to accept for the time being at least, his, the salesman's, viewpoint of the subject in hand. There is the other kind of salesman, probably the brainier man of the two. This man relies not on the power of force, but of suggestion and persuasion to close the sale.

Results of Suggestion.

He so directs the discourse that the prospect thinks the ideas he finds himself expressing are the results of his own thoughts, while they are as a matter of fact the effects of a suggestion, planted in his brain by a successful and understanding underwriter. What a wonderful salesman a combination of these two characters would make, dominating the man who should be dominated, persuading the man who should be persuaded, and implanting suggestions in the brain of the man, where suggestion alone is necessary, but this success can only be achieved by the man who can accurately read and gauge the character of his prospect.

LIFE INSURANCE IN SASKATCHEWAN

Most Business Written on the Farm, Sometimes on Platform of Binder

BY E. S. MILLER.

Saskatchewan is a province, the settled part of which is approximately four hundred miles from east to west, and the same distance from north to south. In this tremendous area there are just about the same number of insurable people as in the city of Toronto, any part of which may be reached in less than an hour by street car or auto. While for the most part the life insurance business obtained in Toronto is written in the office, or in the home, our business is mostly written in the field, on the tail board of the wagon, the platform of the binder, or the seat of the plow. It is a common occurrence to close an application in the field and the applicant, though on his own farm, may be anywhere from a mile to two miles away from his house. He has no money in his jeans and he will not leave a team standing in the field while he goes to the house to dig up the initial payment which every good agent tries to secure with the application.

Three Physicians in 120 Miles.

Then there is the difficulty in securing prompt connection between the applicant and the medical examiner. Particularly since the war, doctors in this country are few and far between. I have in mind one well-settled line of railway (and it is not exceptional) where there are only three practicing physicians in 120 miles.

On the other hand, we have in the west a more even distribution of wealth than obtains in eastern communities. We have few, if any, people who are wealthy, as wealth is reckoned nowadays, and practically no poverty. There is no opportunity for the placing of the fifty and hundred thousand policies, but there are few people here who are unable to carry and pay for a moderate amount of life insurance.

Prosperity on the Prairies.

There is more prosperity on the prairies than at any time in the past and the people generally are in a more receptive mood so far as the life insurance salesman is concerned than they ever were before. Many of the people in our towns and cities to-day wish they had put more money in life insurance and less in town lots, while the better element in our farming population realize that a reasonable amount of life insurance affords protection to their credit, their dependants, and their own old age that they cannot afford to be without.

Notwithstanding the fact that a very large percentage of our possible clientele has been lost to us by enlistment, I believe that practically all of the companies that are actively pushing for business will in 1917 show a gratifying increase over any previous year. This is largely owing to the fact that to-day people are thinking more soberly, and are looking more to the things that are solid and substantial. Speculation is to a large extent dead. We have got down to a proper basis of credit. We are depending on the money we can make by production rather than what we can attract from outside. The gambling element has either left the country or found honest employment, with the result that conditions are good and business on a more solid basis than at any time since the first settler arrived.

"If a man does not provide for his family, if he does not provide for those dependent upon him, then he has not opened his eyes to any adequate conception of human life."—Woodrow Wilson, President of the United States.

"MEN, MUNITIONS, MONEY"

ALL are wanted in the present great war. MONEY has been termed the Silver Bullet, and is playing a very important part. The magnificent subscriptions which have been made by the British people to the call for financial help is sufficient evidence of their whole-hearted determination to win the war at all cost and at any sacrifice.

EVERY PART OF THE EMPIRE IS ASSISTING IN THIS DIRECTION

Thousands of citizens are desirous of helping in this way, but their means are limited or the amount at their disposal appears small in comparison with the huge requirements.

Every individual in the community can do his share in this great work if he joins his efforts to those of the great corporations which are so splendidly assisting by furnishing the funds.

The Mutual Life and Citizens' Assurance Company, Limited (of Australia), has already subscribed to War Loans more than

TWENTY-TWO MILLION DOLLARS

Every policyholder of the Company is thus given the opportunity of carrying out A DOUBLE DUTY, first to the Nation, second to his dependents.

Every premium deposited secures a provision to the family of the depositor, which even under ordinary conditions he should avail himself of.

Help the Nation and Protect the Family by Assuring Now

A Life Assurance Policy enables the wealthy to make needed provision for Succession Duties; the business man secures valuable Collateral Security and Protection of Assets; the wage-earner enjoys the immediate equivalent of years of steady thrift for his family, and this is done in each instance by an investment as profitable as it is safe.

THE MUTUAL LIFE AND CITIZENS' ASSURANCE COMPANY, LIMITED

CASUALTY AND MISCELLANEOUS INSURANCE

Review of the Growth of These Lines During the Past Ten Years

During the past ten years there has been a steady expansion in all lines of casualty and miscellaneous insurance business in Canada. The falling off in volume noticeable in some lines during the first two years of war has now been more than made up, and the figures for 1917 will show a record business.

Personal Accident and Combined Accident and Sickness Insurance.

In 1907 there were 18 companies transacting this class of insurance in Canada under Dominion license, while in 1916 the number had increased to 28. The annual premium income increased from $1,382,077 to $2,121,203 during the ten years as will be seen by the following tabulation:—

	Premiums received.	Losses incurred.
1907	$1,382,077	$ 533,139
1908	1,408,013	496,264
1909	1,642,403	517,669
1910	1,815,571	610.028
1911	1,850,868	668,933
1912	2,022,608	999,193
1913	2,199,885	880,521
1914	2,202,942	1,050,879
1915	2,086,763	1,073,331
1916	2,121,203	962,158

Guarantee and Contract Insurance.

Ten companies were writing guarantee insurance in Canada in 1907, as compared with 18 companies in 1916. The premiums increased from $224,416 to $799,010 in the ten years. The figures for the period are as follow:—

	Premiums received.	Losses incurred.
1907	$243.630	$ 76.378
1908	295.717	122,918
1909	320,023	88.242
1910	371,879	76.451
1911	444,628	152,190
1912	564,096	130,686
1913	645,624	189,030
1914	742,510	341,314
1915	730,138	172,221
1916	799,010	319,983

Employers' Liability Insurance.

In 1916 there were 21 companies transacting employers' liability insurance in Canada, as against 13 in 1907. The falling off in premiums during the past few years has been caused by the action of several of the provinces in eliminating the insurance companies from doing workmen's compensation insurance, the same having been reserved exclusively for workmen's compensation boards established by the government. The figures of the business for the ten years are as follow:—

	Premiums received.	Losses incurred.
1907	$ 908,998	$ 468,801
1908	1,009.885	558,646
1909	1,182,852	637,650
1910	1,644,252	912,818
1911	2.099,639	1,047,530
1912	2.817,286	1.472,921
1913	3,516,758	1,973,319
1914	3.433,179	1,507,051
1915	1,952.250	1.014.485
1916	1.930,198	1,144,937

Burglary Insurance.

In 1907 there were only two companies doing burglary insurance in Canada, as compared with 13 in 1916. while the yearly premiums have increased from $44.183 to $118,673 in the ten years as shown in the following table:—

	Premiums received.	Losses incurred.
1907	$ 44,183	$ 16,924
1908	54,740	22,889
1909	57,900	14,245
1910	55,934	16,302
1911	60,669	14,389
1912	66,042	15,740
1913	75,580	25,320
1914	85,473	35,982
1915	91,885	24,007
1916	118,673	22,107

Steam Boiler Insurance.

In 1916 there were six companies doing steam boiler insurance in Canada, which is but two more than in 1907, but the premium income has increased from $86,777 to $199,017 in the ten years, as will be seen from the following:—

	Premiums received.	Losses incurred.
1907	$ 86,777	$ 13,132
1908	87,613	9,992
1909	99,158	10,255
1910	111,532	3,374
1911	126,506	3,781
1912	135,377	.88,749
1913	147,669	4,866
1914	144,223	8,958
1915	150,377	11,688
1916	199,017	5,716

Sickness Insurance.

In 1907 there were 20 companies and societies carrying on sickness insurance in Canada under Dominion license, as compared with 28 in 1916. The premiums show an increase from $520,587 to $1,109,801 in the ten years, as follow:—

	Premiums received.	Losses incurred.
1907	$ 520,587	$450,738
1908	533,318	458,218
1909	547,442	495,052
1910	603,274	542,809
1911	880,780	638,651
1912	1,027,374	713,729
1913	1,135,430	722,540
1914	1,133,413	690,449
1915	1,084,798	680.358
1916	1,109.801	719,195

Plate Glass Insurance.

While ten years ago there were only five companies transacting plate glass insurance in Canada, at the end of 1916 the number had increased to 22, the premium income increasing from $118,291 to $271,302 in the same period, as follows:—

	Premiums received.	Losses incurred.
1907	$118,291	$ 52,856
1908	133,817	57,017
1909	132,901	53,083
1910	151,399	61,504
1911	272,205	69,686
1912	193,525	88,169
1913	224,829	129.933
1914	291,927	122.940
1915	269.263	100,740
1916	271.302	131,502

Automobile Insurance.

(Both Including and Excluding Fire.)

Automobile insurance has made rapid progress since its introduction as a separate branch in 1910, when seven companies were engaged in this class of insurance, as compared with 33 companies at the end of 1916. The figures of the business for the seven years are as follow:—

	Premiums received.	Losses incurred.
1910	$ 80,446	$ 33,369
1911	253,550	184,218
1912	464,580	176,895
1913	563,204	228,433
1914	573,604	297,499
1915	646,085	289,986
1916	909,503	316,113

A CANADIAN COMPANY INVESTING ITS FUNDS IN CANADA

Inland Transportation Insurance.

While in 1907 only four companies were transacting inland transit or transportation insurance in Canada, at the close of 1916, the number had increased to 11, and the premium income, which in 1907 was $22,369, had increased to $165,605 as follows:—

	Premiums received.	Losses incurred.
1907	$ 22,369	$ 6,020
1908	37,072	7,798
1909	37,465	7,400
1910	114,371	55,417
1911	37,811	572
1912	88,151	31,701
1913	140,240	45,568
1914	193,178	84,544
1915	165,450	109,545
1916	165,605	48,274

Sprinkler Leakage Insurance.

The figures for sprinkler leakage insurance first appear in the Dominion blue book for the year 1910, when three companies were doing this class of business, as compared with eight companies at the close of 1916. The premium income has grown from $18,548 to $51,823 in the seven years, as follows:—

	Premiums received.	Losses incurred.
1910	$ 18,548	$ 3,355
1911	37,238	13,004
1912	32,118	22,930
1913	42,386	6,083
1914	52,722	25,381
1915	38,780	18,014
1916	51,823	29,548

Tornado Insurance.

Tornado insurance first makes its appearance in the blue book for the year 1908, when two companies were transacting this line, as compared with 15 companies at the close of 1916. The premiums have increased from $156 to $48,564 in the nine years as follow:—

	Premiums received.	Losses incurred.
1908	$ 156	$ 20
1909	276	None
1910	588	None
1911	768	None
1912	22,007	810
1913	29,667	5,673
1914	13,282	2,002
1915	26,750	3,623
1916	48,564	24,023

Livestock Insurance.

Two companies were transacting livestock insurance in Canada under Dominion license in 1908, when the business was started here, and the same two companies were carrying on this class of insurance at the end of 1916. The premiums, which in 1908 totalled only $5,041, rose to $132,436 in 1913, and then declined to $76,084 at the end of 1916, as follow:—

	Premiums received.	Losses incurred.
1908	$ 5,041	$ 2,525
1909	47,485	24,201
1910	86,645	51,025
1911	109,257	56,028
1912	127,533	73,598
1913	132,438	77,818
1914	110,436	70,662
1915	79,971	44,553
1916	76,084	52,196

Hail Insurance.

The number of companies transacting hail insurance under Dominion license has increased from one in 1910 to 15 in 1916, while the premium income has increased from $226,881 to $1,430,866 in the seven years as follows:—

	Premiums received.	Losses incurred.
1910	$ 226,881	$ 73,549
1911	200,240	92,000
1912	249,261	117,449
1913	336,572	206,916
1914	242,258	96,254
1915	744,332	402,216
1916	1,430,866	1,570,033

HAIL INSURANCE IN WESTERN CANADA

Government Plan Not Feasible—Farmers Benefit fro Underwriters' Co-operation

BY W. J. WILCOX.

The greatly increased hail insurance premium incom obtained throughout Manitoba, Saskatchewan and Alberta b stock companies in 1917 points unmistakably to the fact tha the Western farmer is at last beginning to realize the absolute necessity of covering himself adequately against hai damage. In the history of agricultural Canada there hav been no such hail losses as those sustained throughout th whole of the Western territory in 1916. Now that the companies have been writing this class of insurance for som years, reliable statistics are being obtained, and useful information as regards the possibility in some localities of ha damage, and the consequent rates which should be charged are being compiled. Every Western farmer knows that ther are some localities which in the memory of man have neve been hailed, whereas others have suffered extensive losse in two and sometimes three consecutive years. When on realizes that there are certain wet and dry belts running through our Western farm lands, it is only reasonable t expect that the likelihood of hail falling in these district varies greatly.

Erratic Hail Storms.

There is probably nothing in the world more erratic tha a hail storm. Sometimes a whole township will be thinl sprinkled with hail, and again a path of a comparatively fe feet in width will be cut right through standing crops, an parts of many fields will suffer in one section 100 per cen loss, whereas the remainder of the fields are practically untouched. The damage usually occurs about the time the cro is ready for harvest, and we can think of nothing more discouraging to a farmer than to see his whole season's labc wiped out in a few minutes.

The storms of July, August and September of 1916 wi stand out vividly in the minds of the average Western farmer and, naturally, he to-day wants the very best protection h can buy. Early in 1917 the Canadian Hail Association wa formed and the majority of the stock companies becam members. As a result of this, the statutory conditions, whic are now the same in all provinces, have been carefully revised, and in this way the interests of the insurance companies and the insured are being benefited.

Distribution of Liability.

From the companies' point of view, there is one facto necessary for their success; that is, the distribution of liability. If this is not carefully attended to, then hail insuranc is a pure and simple gamble. With this is to be considere the question of adequate rates

No exact mathematical process can be used to compil figures which will enable insurance companies to apply i any one year an absolutely adequate rate; therefore, it i essential that statistics over a period of years should be compiled, and thus a rate obtained which, over a cycle, will sho a reasonable profit to the companies and adequate protectio to the insured.

Government Plan Not Feasible.

To these important factors, namely, distribution of liability and adequate rate, the stock companies are in an excellent position to pay attention, and, with these points i view, we feel that the government municipal insurance pla is not feasible. Where the government is writing they naturally have to take liability in the worst sections, and the every farmer automatically obtains covering. This naturall results in a state of affairs whereby the government will hav millions of dollars of liability in a comparatively small sectio of the country, whereas stock companies, knowing the previous records of that territory, will wisely keep out of altogether or write very sparingly.

We are glad that the companies are now keeping together, and, should they follow the wise course which the have apparently laid down, we foresee in the future hail insurance in Western Canada on an entirely satisfactory basis both from the point of view of the company and of the farmer

Workmen's Compensation in Canada

Manitoba and Nova Scotia Commenced Operation of New Acts Last Year

SINCE March 1st, 1917, the employers of industrial labor in Manitoba have been subject to a new Workmen's Compensation Act, and in Nova Scotia, since January 1st, 1917. The Manitoba act is a development of the idea that workmen should not bear the whole financial cost of injuries due to the hazards of their particular trade. Manitoba in its workmen's compensation legislation is not setting any new lead so far as the principle of compensation is concerned. From a volume issued a few years ago by Messrs. Frankel & Dawson, of the Russell Sage Foundation, covering an investigation of European systems, it would appear that workmen's compensation along the same lines has been in force in practically all the great nations of Europe for some years past. Some of these countries have gone much further than has Manitoba, others less so, also the time that the different nations have had such legislation in force, has varied, and it has consequently been difficult to arrive at the system which works out best. The same might be said of legislation on this continent—while the principle has been largely the same, the methods of operation and basis of compensation have varied. In the United States most of the states have their workmen's compensation act. Some are compulsory government insurance, others, as in Manitoba, are compulsory company insurance, with government control of rates. New York has three options—government insurance, mutual insurance and stock companies.

In Canada, Ontario adopted the government insurance plan, as it is popularly called, which is really a classified grouping mutual managed by a workmen's compensation board appointed by the government. Manitoba legislation is largely identical with Ontario's basis of compensation, but operated through approved companies instead of the government mutual plan.

British Columbia has followed Ontario's lead in practically all respects.

Saskatchewan and Alberta still retain their employers' liability acts, while of the eastern provinces, Nova Scotia has an act and administration similar to Ontario. New Brunswick and Quebec still operate under employers' liability acts.

A new act is under consideration in Alberta and a commission is taking evidence at different points. Their report will in due course be laid before the Alberta cabinet.

MANITOBA'S WORKMEN'S COMPENSATION ACT

Employers May Carry Insurance With Companies if Desired

The Workmen's Compensation Act, passed by the Manitoba legislature on March 10th, 1916, became operative as respects payment of compensation on March 1st, 1917. It introduces radical changes in the law respecting injuries to employees. Upon its coming into force earlier legislation comprised in the Employers' Liability Act, R.S.M., 1913, Chapter 61, and the Workmen's Compensation Act, R.S.M., 1913, Chapter 209, will become inoperative. It does not apply to farm laborers or domestic or menial servants or their employers.

Employments Covered.

All other employments are divided into two classes, governed respectively by part 1 and part 2 of the act.

Part 1 applies to employments in the very large number of industries enumerated in the schedule to the act. These may be described in general terms as embracing manufacturing, milling, lumbering, mining, quarrying, fishing, transportation, navigation, cosstruction, building, warehousing, operation of public utilities, and all occupations in connection therewith, hut for complete information as to what industries and what employers and workmen are covered by part 1 of the act the schedule itself should be referred to.

Part 2 applies to employments in the industries not mentioned in the schedule. Chief among these are mercantile business, hotel keeping, restaurant keeping, gardening, hand laundries, barber shops, photography, hospital work, dentistry and undertaking. To cover questions arising out of this division the Board has decided, as a rule of interpretation of the act, that every industry is to be regarded as a unit, so as to carry with it all operations and occupations incidental to it. Thus warehousing or transportation incident to manufacturing are within the provisions of part 1, but where incident to a mercantile business they are not.

An exception to the rule is the operation of freight and passenger elevators, where workmen are specially employed therefor, which is expressly declared to be within part 1, whether the industry to which it is incident is or is not mentioned in the schedule.

Part 2 is not under the jurisdiction of the board. Disputed claims arising under it are decided as formerly by actions in the courts, but workmen's rights have been extended by the taking away of the employer's defences of common employment and assumed risk, and by making contributory negligence only a ground for reduction of damages instead of a bar to recovery. Part 1 is administered by the board and the following articles are to be understood as referring to it alone.

Where Compensation is Payable.

The compensation for the injury is payable irrespective of any question of negligence or absence of negligence and defences of common employment and voluntary assumption of risk are no longer applicable. The only cases in which compensation is not payable, provided the accident arises out of or in the course of the employment, are:—(1) Where the disability lasts less than six consecutive working days; (2) where the accident is attributable solely to the serious and wilful misconduct of the workman, and does not result in death or serious disablement.

Compensation is to be paid for industrial diseases as well as for accidents. No agreement to forego the benefits of the act is valid, and no part of the amount payable is to be charged against the workman, and, except with the approval of the board, the compensation cannot be assigned, charged or attached. The right to compensation so given is in lieu of all other rights to compensation or damages, statutory or otherwise.

Scale of Compensation.

If the accident results in death and the workman leaves a widow but no children, the widow is entitled during life or widowhood to a payment of $20 per month. If he leaves a widow and children, the payment to the widow is $20 a month for each child under sixteen years of age, but not exceeding $40 in all. If he leaves children only, the payment is $10 a month for each child under sixteen, but not exceeding $40 in all. Where the dependents are persons other than those above mentioned, they are entitled to a sum reasonable and proportionate to the pecuniary loss occasioned to them by the workman's death, but not exceeding to the parent or parents $20 a month, or in the whole $30 a month. The foregoing is governed, however, by the provision that in no case is the compensation to exceed 55 per cent. of the workman's

earnings in the employment; and all provisions for compensation are subject to the proviso that the earnings of a workman shall not in any case be reckoned at more than $2,000 a year.

Where a widow marries again, the periodical payments to her cease on her marriage, but she is entitled, within a month after her marriage, to a lump sum equal to two years' payments. Where the accident results in total disability of a workman, he is entitled during the continuance of the disability, whether for life or temporarily, to a weekly or monthly payment equal to 55 per cent. of his earnings in the employment. Where the workman is only partially disabled he is entitled to 55 per cent. of the impairment of his earning capacity. Reasonable expenses of medical attendance, nursing, etc., and where the injury results in death, reasonable expenses of burial, ar also to be paid.

One of the important features of the compensation is that it is payable periodically rather than in a lump sum, and as a rule it continues during disability or during life, as the case may be, but provision is made for commutation of the periodical payments in certain cases. Where the impairment of earning capacity does not exceed 10 per cent., the compensation is to be fixed at a lump sum unless the board thinks it is not to the advantage of the workman to do so.

Settling Compensation.

All questions as to right to compensation, and the amount of it, are to be determined by the board instead of in the courts. The employer is required by the act to notify the board within three days of any accident happening to a workman in his employ, which disables the workman from earning full wages. The workman must, as soon as practicable, and before voluntarily leaving the employment, give notice of the accident to the employer and to the board, and must make claim for compensation within six months. In keeping with the policy of the act, which aims at speedy and inexpensive determination of claims, the board dispenses with all but the simplest forms of procedure on the part of the litigants. Forms to be filled out by the workman and employer respectively will be supplied on request and when these are completed and filed the board will adjudicate upon the claim, make further enquiries, appoint a time for hearing, or take such other action as seems proper.

Liabilities and Duties of Employers.

Every employer is individually liable to pay the compensation. He is liable not only to his own workmen, but to the workmen of a contractor who contracts with him for the performance of any work undertaken by him in the course of his trade or business. In the latter case he is entitled to be indemnified by the contractor.

In order to assure to workmen, or their dependents, payment of any compensation that may be awarded, every employer is required by the act to insure himself against liability in some insurance company approved by the board for the purpose, and to deposit the policy with the board, but, by permission of the board, given with the approval of the lieutenant-governor-in-council, an employer may be exempted from this obligation and allowed to carry his own insurance. Failure to insure, or to obtain permission to carry his own insurance, subjects an employer to a penalty of $200 per day during default.

Employers are also required, under a like penalty in case of default, to prepare and transmit annually to the board a statement of wages earned by all their employees during the year last past, and an estimate of the amount which will be expended for wages during the then current year, both verified by statutory declaration.

By regulation of the board, the 15th day of February, 1917, has been fixed as the date on or before which such statements, estimates and policies must first be filed, and where an industry is established or commenced after that date it is the duty of the employer to notify the board of the fact and to file an insurance policy and an estimate of his pay roll for the remainder of the year.

In any case where an employer would be entitled to a lien under the Mechanics' and Wage Earners' Lien Act, it is the duty of the owner as defined by that act to see that a policy of insurance is filed by such employer, unless such employer has been permitted to carry his own insurance.

Where compensation is awarded it must be paid to the board and by the board to the persons entitled to it.

To defray the expenses of the administration of the act by the board each employer carrying his own insurance and each insurance company is required to pay to the board seven and one-half per cent. of the premium charged by such insurance company, or which such employer would have been charged had he insured against his liability.

NOVA SCOTIA'S COMPENSATION ACT

Employers' Liability Policies Were Cancelled Last Year—Provisions Meet With General Approval

BY V. J. PATON, K.C.

A workmen's compensation act is now in force in Nova Scotia. It is chapter 1 of the acts of 1915, but did not come into force for the purpose of paying compensation until January 1st, 1917. The provisions of it are practically the same as those of the Ontario Workmen's Compensation Act, although some sections are differently worded. The act is divided into two parts. Part 1 contains the compulsory compensation features of the act, and mentions the industries within the scope of that part. They are practically the same as the Ontario industries except that all railways in Nova Scotia other than government railways are within that part of the act the same as any other industry. In Ontario railways are placed in a schedule by themselves.

Under our act the scale of compensation is as follows:—(a) Burial expenses not to exceed $75. (b) To a widow $20 a month for life or until she remarries, in which case she is paid $480, and thereafter compensation ceases. (c) Where dependants are widow, and children under sixteen, $20 a month for life to widow and $5 to each child under sixteen, whole amount not to exceed $40. (d) Where there is no widow and the dependants are children $10 a month to each child under the age of sixteen, not exceeding in the whole $40.

Other Than Widow and Children.

(e) Where the dependants are persons other than widow or children a sum reasonable and proportionate to the pecuniary loss of such dependants, the same to continue as long as it might reasonably have been expected that the workman, had he lived, would have continued to contribute to the support of dependants. (f) Where the accident is not fatal compensation is payable to the injured workman to the amount of fifty-five per cent. of his average earnings during total disability and fifty-five per cent. of any impairment in his earning capacity during partial disability.

The act applies to all personal injuries by accident arising out of or in the course of the workman's employment except where the injury—

(a) Does not disable the workman for the period of at least seven days from earning full wages at the work at which he was employed; or

(b) is attributable solely to the serious and wilful misconduct of the workman, unless the injury results in death or serious and permanent disablement.

If the disability lasts over seven days compensation is payable from the date of the disability.

Assessment of Employers.

The act provides for assessing employers by an assessment based upon their pay rolls The money so obtained is paid to the workmen's compensation board, and forms an accident fund, out of which compensation is payable by the board to the injured workmen or their dependants.

As to the position of casualty and accident insurance companies in our province, after January 1st, 1917, employers' liability policies were cancelled, as there was no longer any need for such insurance, with respect to any industries within the scope of part 1 of the act.

The act came into force on January 1st, 1917, for all purposes. It came into force on October 1st, 1916, for preliminary purposes. As stated above, the act was passed in 1915. Amendments were passed on the 7th day of May, 1917, being chapters 70 and 71 of the Nova Scotia acts of 1917.

The act is working well and is meeting with the general approval of the employers and of the workmen of the province. There are 1,496 employers contributing to the accident fund, and the yearly amount so paid by them is about $800,000.

INDUSTRIAL

WINNIPEG
THE GATEWAY CITY OF THE WEST

Forty years ago Winnipeg was without railway communication. Transportation facilities were confined to the rivers and to ox carts. To-day twenty-seven lines of railway radiate from this city.

TEN YEARS' PROGRESS IN WINNIPEG

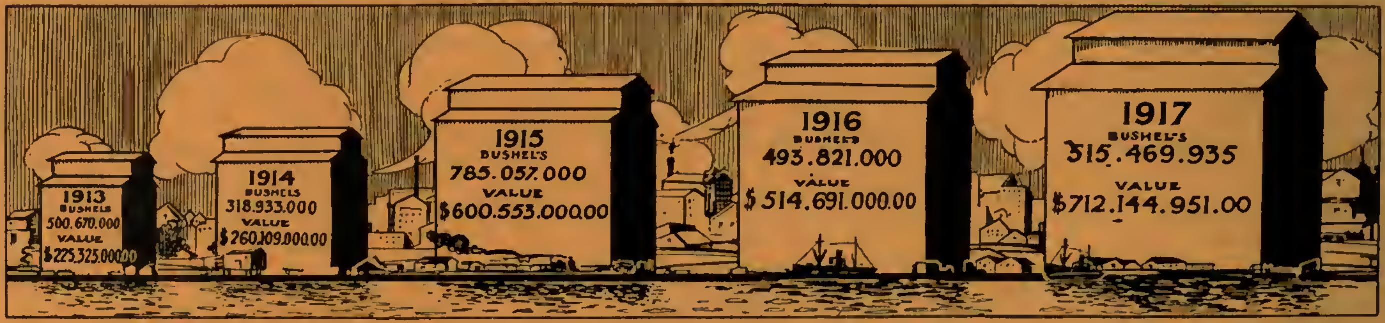
BANK CLEARINGS

Year	Amount	Year	Amount
1907	$ 599,667,576	1913	1,634,977,237
1908	614,111,801	1914	1,370,960,806
1909	770,649,322	1915	1,530,683,124
1910	953,415,281	1916	2,061,795,257
1911	1,172,762,142	1917 to Nov. 30th	2,377,168,918
1912	1,537,817,524		

INDUSTRIAL GROWTH

Year	Annual Output	Over 420 Industrial Plants in 1917
1905	$ 18,983,248	22,000 hands employed
1910	39,400,608	$12,000,000.00 annual payroll
1916	54,500,000	$73,000,000.00 capital invested

STUDY THIS CROP STATEMENT



Practically this entire crop is marketed through Winnipeg.

Only 12% of Western Canada's arable lands are at present under cultivation.

Can you, Mr. Business Man, estimate the purchasing power of the output of Western Canada's farms during the next ten years, considering the fact that the above figures do not include the value of the live stock production? Remember that Winnipeg is the logical market for Western Canada.

The following, showing the purchasing power of a Western Canadian farm of 100 acres, is considered an authentic estimate:—

1915	1916	1917
$3,140.00	$2,694.00	$3,725.00

The population of Manitoba, Saskatchewan and Alberta does not exceed one million six hundred thousand. The population of Manitoba, according to Directory estimates, is placed at 553,000. Population of Greater Winnipeg, 247,000.

Winnipeg will undoubtedly occupy a prominent position as a manufacturing city as the development of Western Canada proceeds.

Hydro-electric Power is sold to manufacturers at from 3c. to ½c. per K.W.H. 90,000 H.P. at present developed within 75 miles of Winnipeg on the Winnipeg River. Government statistics place power possibilities of the Winnipeg River at 418,000 continuous 24-hour H.P., all within 75 miles of this City.

Correspondence cordially solicited. All enquiries receive individual, careful and prompt attention.

Canada's War Orders To Date: $1,812,000,000

Value of Munitions Orders Placed Here Since the Outbreak of War to the End of 1917 is $1,000,000,000; Last Year the Expenditure on These Orders Totalled $338,000,000—In Addition, We Got Orders For Over $46,000,000 Worth of Ships

Orders placed in Canada for	Period.	Value.
Shells, fixed ammunition, etc.	August, 1914—September, 1917	$ 925,270,000
Shells, fixed ammunition, etc.	September, 1917—December, 1917	75,000,000
Ships, wooden and steel	Year, 1917	46,730,000
General supplies	August, 1914—December, 1915	235,000,000
General supplies	January—December, 1916	260,000,000
General supplies	January—December, 1917	270,000,000
Total war orders	August, 1914—December, 1917	$1,812,000,000

War orders valued at approximately $1,812,000,000 have been placed in Canada since the outbreak of war. This total has been arrived at by *The Monetary Times* as the result of three successive investigations and with the assistance of figures supplied by the Imperial Munitions Board, the British War Office Service in Canada, the Department of Agriculture, the Department of Trade and Commerce and the War Purchasing Commission, Ottawa. This vast sum represents an average annual expenditure in Canada of $604,000,000 on shells and general war supplies for three years of war, as little was supplied by us before the end of 1914.

More than half the orders received are represented by munitions. Since the outbreak of war to the end of September last, the orders placed by the Imperial Munitions Board were valued at $925,270,000. Since that date, approximately $75,000,000 of further orders have been placed, bringing the total value of munitions orders up to $1,000,270,000, to the end of 1917. In addition shipbuilding orders of over $46,000,000 have been placed here. The following memorandum has been handed to *The Monetary Times* by Sir Joseph Flavelle, chairman of the Imperial Munitions Board:—

(1)	Value of munitions orders placed in Canada last year, to September 30	$263,000,000
(2)	Value of shipbuilding orders	46,730,000
(3)	Value of orders placed in Canada since the outbreak of the war, including shipbuilding	972,000,000
(4)	Number of people engaged in the munitions industry in Canada, approximately	225,000

Credits to End of Year.

Sir Thomas White, finance minister, stated in the House at Ottawa, on September 8, that $25,000,000 monthly would be advanced to the Imperial Munitions Board for munitions orders during October, November, December, 1917.

The munitions business of Canada has expanded at a remarkable rate. Brigadier-General Sir Alexander Bertram, speaking to the Canadian Society of Civil Engineers, Montreal, in October, stated that we had shipped sufficient tonnage of shells to build 19 bridges across the St. Lawrence, each equal to the Quebec bridge. Our tonnage of shells shipped to the Empire would build 66 battleships of 18,000 tons each.

Dealing with the manufacture of munitions in Canada, General Bertram emphasized the large undertakings it had brought into force here Amongst these were two new industries, the refining of copper and spelter. At Trail there were being produced monthly 360 tons of copper, 1,700 tons of lead and 1,200 tons of zinc, which taxed the capacity of all our steel producing and refining plants. In addition, plants had been organized for the manufacture of all kinds of explosives. Further, the manufacture of aeroplanes had been introduced and to-day was so well organized that 100 aeroplanes were being turned out monthly, with plans to double this output immediately. In addition the board had established plants for the manufacture of nitrocellulose powder, T.N.T. and cordite.

As to shell production, this included 18-pounder shrapnel, 27,031,714; 18-pounder high explosive, 5,300,908; 4.5 high explosive, 8,738,470; 60-pounder high explosive, 1,097,317; 6-in. high explosive, 2,959,626; 8-in. high explosive, 747,190; 9.2-in. high explosive, 744,179. These made a total of 47,519,404 shells, comprising 1,029,860 tons of steel. Besides these there had been made of 18-pounder and 4.5-in. cartridge cases—a totally new industry—39,655,427, using 20,768 tons of copper and brass, while shell forgings had been exported to the extent of 4,921,037, using 138,498 tons of steel.

With regard to explosives, General Bertram said that one plant was producing about 40,000 pounds of T.N.T. per day and 80,000 pounds of nitrocellulose powder. Approximately 46,000,000 pounds of T.N.T. had been manufactured since the commencement of the war. Another company was producing about 2,000,000 pounds per month, while a third plant, incidentally another new industry, when operating at full force, produced 40,000 time fuses per day. Another plant had been volunteered for the manufacture of acetone and was to-day producing over 100 tons a month, the acetone being used for cordite.

Over Four Thousand Tons.

Another new industry established by the Imperial Munitions Board had been an electric steel plant to utilize scrap metal. This was nearly completed and already at work, and expected to send approximately 4,500 tons monthly for the British government.

The work was carried on in 400 factories in Canada, three-fifths in the manufacture of shells and two-fifths on components, basic supplies and shipbuilding.

The object was to produce the finished article from Canada's own mills and mines, and this had been achieved, from fuse to cartridge cases and the 25,000,000 boxes required for shells.

The department of agriculture had made disbursements for British War Office account, in connection with the purchase and shipment of hay, oats and flour, amounting to $94,329,040, up to the end of September, 1917. According to a statement by this department to *The Monetary Times*, the total quantity of hay shipped by them since the outbreak of the war amounts to 481,049 tons. This hay was purchased in ordinary bales and recompressed into bales of smaller size and greater density at Montreal, West St. John and Woodstock, N.B., Windsor, N.S., Charlottetown, P.E.I., and Calgary, Alta. The bulk of the hay was recompressed at the Montreal plant, the capacity of which is about 1,000 tons per day, running 24 hours.

Oats and Flour.

No hay has been shipped since June last on account of the scarcity of transport, and the big crop of hay in the United Kingdom in 1916 which enabled the War Office to draw supplies from that source.

The quantity of oats shipped to September last was, in round figures, 1,283,055 tons, or about 76,000,000 bushels These oats came mostly from the prairie provinces. Bagging plants have been located at West St. John, Montreal, Kingston, Port Colborne, Depot Harbor, Midland and Port McNicoll. The oats have been shipped in bulk to these points and then forwarded to the ship's side in bags. Until last fall the department of agriculture purchased the necessary bags, but since then the supply has been sent direct from Dundee by the War Office.

Although there is still a comparatively small quantity to ship, the total flour purchased was over 12,000,000 bags.

amounting to something like 440,000 tons, requiring for its manufacture 24,000,000 bushels of wheat.

The department of trade and commerce made purchases for Britain, France, New Zealand and South Africa, until late in 1916. By that time various British and foreign purchasing commissions had been established in Canada and these commissions have continued such purchases during the past year.

Since the commencement of their operations in May, 1915, the orders placed by the War Office Service at Montreal, aggregate approximately $58,000,000. The list of supplies bought is quite varied, but the commodities may be summarized under six headings as follows: Foodstuffs, $36,000,000; sugar, $10,700,000; miscellaneous manufactures of iron and steel, $3,400,000; woolen and cotton goods, $2,600,000; leather and rubber goods, $1,500,000; miscellaneous supplies, $3,800,000; total, $58,000,000.

The steel companies are all busy with various war orders. The steel companies are also engaged in making chemical explosives. Many other shops are also busy with shells.

Some Big Orders.

Some of the numerous large orders received since the war commenced are as follow:—

Company.	Order.	Ordered by
Canadian Car & Foundry Co.	$83,000,000 (shells)	Russia
Canadian Car & Foundry Co.	2,000 box cars	Russia
Eastern Car Co.	2,000 box cars	France
Canadian Locomotive Co. ..	50 locomotives	Russia
Eastern Car Co.	1,000 coal cars	France
Canadian Car & Foundry Co.	box cars	Great Britain

These are typical orders and give an idea of the size of the business being placed in Canada. These and other companies are negotiating with the governments concerned, for still further orders. At the same time the Dominion government is placing large orders for the equipment of its expeditionary forces.

The Eastern Car Company delivered in 1916 2,000 extra large box cars to the Russian government at Vladivostok. These cars gave excellent satisfaction. The same company also delivered in France in 1916 their first order for 1,000 cars for one of the French State railways. They were working last year on two other orders for France, one for the State railways and the other for the Paris and Orleans railway system. These amounted in all to 3,000 cars. Two steamer loads were ready for shipment in October, 1916. A large proportion of both these orders went forward before the end of 1916. The company is still engaged in the manufacture of freight cars for Russia and France.

Orders have also been placed here during the past year for United States army and navy supplies, but details of these cannot yet be obtained.

Negotiations conducted at Washington in November by the Imperial Munitions Board, Ottawa, resulted in the placing of a large order for 75 mm. shells, to be produced by Canadian plants for the United States government. About 7,500,000 shells will, under this arrangement, be produced in Canada during the first seven months of 1918.

The Imperial Munitions Board are acting for the United States authorities in placing the contract and supervising the production of these shells in Canada. The United States ordnance department is supplying the steel and component parts. The Canadian manufacturers are forging the steel and machining and assembling the shells. The Dominion government, which has co-operated in the negotiations, is, through the department of customs, facilitating the entry of steel and components into Canada and their reshipment as shells to the United States.

Credits for Britain.

The provision by Canada of credits here for Great Britain has facilitated the placing of war orders in this country. Indeed, the volume of these orders depends upon the amount of credits Canada is able to advance. To date, the total credits of this nature have been approximately $680,000,000. Sir Thomas White has frequently reminded us that the placing of orders for munitions and supplies in Canada depends upon our power to provide the credits here from which the British government must pay for them. How shall we obtain the money with which to bear our own war expenditures and loan large amounts in addition to the Imperial government to maintain and even increase the volume of orders for munitions and supplies which are coming to Canada at the rate of $2,000,000 a day?

The reply is by increased production and by economy in expenditures. This will enable us to pay our interest upon foreign indebtedness and retain a large balance representing the national gain upon the year's operations. Our present policy, therefore, must be one of national saving and investment of these savings in national securities.

Imperial Munitions Board.

The Imperial Munitions Board which took the place of the old Dominion Shell Committee, is the medium through which the Imperial government's shell orders are placed in Canada. Sir Joseph Flavelle, Toronto, is chairman, and is giving the whole of his time to the work. The other members are: Colonel E. Carnegie, Welland; Mr. G. H. Dawson, Victoria and Mr. E. R. Wood, Toronto. Mr. F. Perry, a former member of the colonial office and Imperial secretary under Lord Milner in South Africa, is the British representative on the board.

There is an advisory committee of the board appointed to inquire into the supply of raw materials for the production of war munitions and for the best method of conserving re-

SOME OF OUR LARGE WAR ORDER ITEMS.

1.	Shells, fixed ammunition, etc., from beginning of the war to December, 1917			$1,000,270,000
2.	Ships ordered during 1917			46,730,000
3.	Supplies purchased through British War Office Service, Montreal, to October, 1916:—			
	Cotton and woolen goods		$ 2,600,000	
	Foodstuffs		36,000,000	
	Sugar		10,700,000	
	Miscellaneous manufactures of iron and steel		3,400,000	
	Miscellaneous supplies		3,800,000	
	Leather and rubber goods		1,500,000	
				58,000,000
4.	Purchased and prepared for shipment by department of agriculture, Ottawa, to October, 1917:— Hay, flour, oats, etc., for the Imperial authorities........................			94,329,040
5.	Supplies purchased through the department of trade, Ottawa, to end of 1916:—			
	For.	Order.	Value.	
	Great Britain	1,000,000 bags flour	$ 3,003,005	
	France	406,916 army blankets	1,690,096	
	Italy	101,974 army blankets, 605,129 shirts	1,019,886	
	Italy	11,416,485 bushels wheat (approximately)	16,000,000	
	New Zealand	503,224 bushels wheat	1,000,401	
	South Africa	35,000 bags flour	129,663	
				22,843,051
6.	Similar supplies purchased during 1917 by special purchasing commissions, including the Hudson's Bay Company acting for France, estimated at			50 000,000
7.	Supplies to Imperial navy by Canadian naval stations, estimated at			8,000,000

sources. The members of the advisory commission are Colonel Carnegie; Senator Edwards, Ottawa; G. W. Watts, Toronto; R. Hobson, Hamilton, and G. G. Mackenzie, superintendent of mines, Ottawa.

The Hudson's Bay Company are agents acting for the French ministry of commerce in arranging for and transporting on its behalf purchases made in Canada. No official figures are available as to these purchases.

War Purchasing Commission.

At Montreal there is also a British War Office Service in Canada which is making substantial purchases.

Another medium for war orders is the War Purchasing Commission with headquarters at Ottawa. The commission is made up as follows: Hon. A. E. Kemp, P.C. (chairman), Mr. C. F. Galt and Mr. H. Laporte. It does not itself directly place orders but authorizes orders which are placed by other departments for war purposes. This commission was appointed on May 8, 1915, and its duties include the supervision of purchases for the Canadian Expeditionary Force, as well as for the naval service and internment operations, of clothing, equipment, munitions and materials of war and supplies of every nature and the supervision of contracts for transportation, payable under the war appropriation acts. It is also directed to purchase on behalf of the government such supplies and munitions of war as the government may negotiate for the British or any Allied government.

In a general way the commission receives authority from the Privy Council to make expenditures necessary to effect any of the purposes authorized by the act, or it may be a specific authority approving the making of certain purchases. The commission, before seeking a general or specific authority to make purchases or authorize the making of contracts, prepares a report to the prime minister based upon a requisition or contract demand giving quantities and estimated cost from the department concerned.

Purchases are made upon a tender or competitive basis. The officers and employees of the departments concerned afford the commission necessary information with regard to the matters falling within the scope of its duties and powers, and co-operate with it in their performance whenever so required. The departments which chiefly co-operate with the commission are those of militia and defence, naval service and justice (the last mentioned in connection with internment operations).

The commission has compiled purchasing lists composed of Canadian producers in different branches of industry who are invited to tender upon articles in their particular line which are included in the numerous and varied requirements of the government. Many of the articles which have become war-time necessities were not hitherto made in Canada. Canadian producers have, however, familiarized themselves to such an extent with the different articles required that sufficient rivalry has been developed to ensure reasonable competition. Inspection is carried out at headquarters in Ottawa.

Rates of Transportation.

The rates charged for the transportation of bodies of troops of 350 or more, of all ranks, for distances over 100 miles, are one cent per mile second class, whether the railway company provides second-class accommodation or not, and one and one-half cents per mile first class; and the rates for numbers fewer than 350 and for distances of 100 miles or less, are one and one-third cents per mile for second class and two cents for first class.

The rates for freight are on a commodity basis of fourth class on military equipment, C.L. minimum 20,000 pounds.

The rates for the transport of troops overseas are fixed by an agreement in connection with the sailing of each vessel, these rates on an average being $61 for officers and for other ranks varying from $33.75 to $36.25 according to the class of vessel.

Supplies for overseas forces are for the most part transferred on vessels under Admiralty charter, and accordingly the freight charges on such supplies are controlled by Admiralty regulations.

About 9,000,000 acres out of a total of 210,000,000 acres in Quebec province are under agricultural development. The chief crop of the remaining 200,000,000 acres is and will always be timber for the reason that the soil is unfitted for tillage.

CANADA'S TRADE RELATIONS WITH NORWAY

Some Norwegian Capital is Invested in the Dominion—Imports and Exports

BY L. AUBERT.

The trade relations between Canada and Norway have hitherto not been very extensive, as lack of direct shipping facilities to a large extent has prevented the exchange of goods between these two countries. Just before the war broke out certain Norwegian shipping interests had practically completed plans for establishing a direct freight line between Norway and Canada, and a regular Norwegian freight line, trading on the Western States by means of the Panama Canal, was prepared to accept freight also to and from Western Canadan points. The exigencies of the war prevented further development along these lines. There is, however, every reason to believe that when settled conditions again will prevail the plans mentioned above will be reconsidered, so that the shipping service between Norway and the Dominion will be taken care of in a better way than hitherto.

Imports and Exports.

The value of the exports from Canada to Norway and the imports to the Dominion from Norway during the last three fiscal years will be seen from the figures quoted below from the official Canadian statistics:—

Fiscal year ended March 30th.	Imports to Canada from Norway.	Exports from Canada to Norway.
1915	$388,809	$1,000,790
1916	244,842	458,542
1917	325,239	966,153

The exports to Norway chiefly consisted of wheat flour, while the imports from that country to a large extent were made up of sardines and other tinned fish. There are, however, numerous other articles which may be exchanged between the two countries in the interest of both parties. Thus, Canada has a large exportable surplus of foodstuffs of all kinds, for which goods Norway probably always will afford a market. Of other articles which presumably could be exported from Canada to Norway I may mention agricultural machinery, asbestos, cobalt, etc., while, on the other hand, Canada might advantageously buy certain chemical products, various machinery, high-grade paper, and several other goods from Norway

Norwegian Investments Here.

With regard to Norwegian investments in Canada, the British American Nickel Corporation, which is building a nickel refining plant near Sudbury, Ont., to some extent is financed by Norwegian capital. In the year before the war broke out Norwegian money was also invested, though not in any considerable degree, in real estate in Western Canada. A Norwegian fish expert recently started a cod liver oil refinery in Eastern Canada.

Regarding the immigration to Canada from Norway, a large number of Norwegians are living, especially in the middle and the western part of Canada. The exact number of Norwegians living in Canada is not known. They are principally farmers.

BRITISH COLUMBIA'S SALMON PACK

It is estimated that the money value of the British Columbia pack of salmon in 1917 will exceed that of any previous year. Prices last year were higher than before, and pack of over a million cases compares as follows:—

	Cases.
1909	967,000
1910	762,000
1911	948,000
1912	996,000
1913	1,353,000
1914	1,111,000
1915	1,133,000
1916	995,000
1917 (estimated)	1,000,000

CANADA'S COMMERCIAL BALANCE SHEET (Compiled for *The Monetary Times* by the Department of Trade and Commerce)

IMPORTS (Coin and Bullion excluded). See page 236 for Export figures.

SHIPBUILDING IN BRITISH COLUMBIA

Important Industry is in Full Swing—Steel Plant Needed —Launching of the "War Dog"

BY H. H. STEVENS, M.P.

In the short space of two years, British Columbia has advanced from the anticipatory stage to the actual, as far as shipbuilding is concerned. It has been demonstrated that wooden or steel ships can be built on this coast successfully, and it is confidently expected that the shipbuilding industry is now permanently established.

As far as wooden shipbuilding is concerned, we have a limitless supply of suitable timber and this is now being secured in adequate quantities. For a while, the shortage of skilled labor presented the chief difficulty, but after nearly two years' experience, nearly all the yards state they find no real or insuperable difficulty in training ordinary carpenters to efficiently handle the more intricate task of ship carpentry.

As regards steel shipbuilding, one of the causes of anxiety on the part of the operating yards has been the uncertainty of supply of sufficient steel plates, but in spite of this, wonderful progress has been made. Here also, the lack of trained or skilled men has been a handicap, but, as in the case of wooden shipbuilding, it has been found quite feasible to utilize iron workers of other lines and train them in the new work.

Six Large Yards.

There are six large yards now engaged in wooden shipbuilding and three in steel construction in British Columbia. Already eleven wooden sailing ships of 2,500 tons burthen, with auxiliary power, have been launched and are now scattered in every quarter of the globe with cargoes from British Columbia. There are twenty wooden steamers now in various stages of completion, and seven more under contract for the Imperial Munitions Board. These are of about 3,500 tons' burthen. The yards which are now engaged in this work are well equipped and will be able to take on more work in the immediate future. Referring to the labor conditions one expert said to the writer recently: "There is a great dearth of shipwrights and caulkers, and, in consequence, the yards are somewhat handicapped, as it takes time to convert an ordinary carpenter into a shipwright."

As far as steel shipbuilding is concerned, splendid progress has been made. The Wallace Shipyards have had the honour of completing the first vessel, a steamer of 4,600 tons burthen (the "War-Dog"), and they have another of the same type well under way. Several other orders are in hand by this firm.

The "J. Coughlan & Sons" converted their structural steel plant into a shipbuilding plant with a capacity for constructing ships up to 10,000 tons, and at the present time have signed contracts for six vessels each of 8,800 tons. This firm can now lay down six such vessels per year, and can easily increase this capacity to ten per year. It is expected that the first of these vessels will soon be launched.

Another yard is about to be established with orders in hand for four steel vessels for the French Government, besides several official enquiries from the British, Norwegian and American governments.

Six Thousand Employees.

There are now about 6,000 men employed directly in this new industry and several millions of dollars have already been spent and many millions more contracted for. In addition to this, many machine shops and factories are busy turning out accessories and equipment, so that shipbuilding has now become one of our most promising and thriving industries.

As some evidence of the need of ships, there is one order for ten million feet of timber which cannot be filled for lack of bottoms to carry it to its market; besides this, it is impossible to handle the cargoes offering for oriental ports alone.

Last year, in *The Monetary Times* Annual, I pointed to the need of a steel plant to supply the steel required, and this need is now much more apparent; in short, it is imperative. The iron ore is here in vast quantities, with unlimited supplies of coking coal and an immediate demand at home and abroad for iron and steel. It would therefore seem reasonable that such a plant should now be established.

CANADIAN MANUFACTURERS AFTER THE WAR

They Will Be in Good Position to Meet New Problems—Labor Conditions

By SENATOR CURRY.

In regard to the manufacture of munitions and the change from this business to regular business lines after the war, I believe the Canadian manufacturers engaged in munition work are generally strengthening their financial position, which will be a great help to them in their regular business after the war is over.

Now that the United States are purchasing enormous quantities of shells, a number of Canadian manufacturers who have finished their contracts are disposing of their machinery at good prices to United States manufacturers, and it is quite possible that others may use their machinery on finishing shells for the United States government.

Condition of Machinery.

As to the condition of this machinery at the close of the war, it is likely that before the war is over a great deal of this machinery will have been in use four years, and most of it operated from 20 to 24 hours per day, so that a great deal of it will be worn out and have to be scrapped on that account, and no doubt most of the machinery that remains in good condition until the end of the war will find use in general commercial lines under peace conditions.

As to manufacturing generally under peace conditions after the war, my opinion is that stocks of manufactured goods of all kinds will be at a very low level at the end of the war, both on account of the very high prices now existing and the necessity of using all facilities for munitions and other articles necessary for the carrying on of the war. Therefore, I think that prices will rapidly become normal after the war and the filling of the requirements for commercial goods will keep practically all of our manufacturers busy for years to come.

Labor Conditions.

Labor conditions should improve with the close of the war, and the return of so many men from military service to their former occupations.

I also believe that we may confidently look for a very large increase in the number of settlers coming to Canada after the war.

LIVE STOCK IN CANADA

The quinquennial return of live stock in Canada was issued at Ottawa last month. The following are the figures the unit being thousands:—

	1912.	1917.
Horses	2,692	3,035
Cattle	6,431	5,971
Sheep	2,082	2,010
Pigs	3.477	2,514

The average value of horses in Canada in 1916 was about the same as in the previous year, but milch cows, other cattle, sheep and swine showed a substantial increase and returned values that were higher than in any year since these records began to be collected in 1909 by the census office, Ottawa. Horses three years old and over average, for Canada, $150 in 1916 as against $160 in 1915, milch cows are $70 as compared with $62, cattle between one year old and three years average $43 against $38, sheep average $10.48 against $7.96, and swine $11.98 per 100 pounds, live weight, as against $8.58. The average value of wool attains a record of 37 cents per pound for unwashed and 50 cents per pound for washed wool. Using the numbers of live stock as estimated in June, 1916, and the average values returned, the total value of the farm animals of Canada may be estimated at $798,544,000, as compared with $746,246,000 in 1915, the values of each description being as follows: Horses, $374,831,000 as against $370,378,000 in 1915; milch cows, $181,813,000 as against $164,224,000; other horned cattle, $170,254,000 as against $151,477,000; sheep, $20.588 000 as against $16,225,000, and swine, $51,058,000 as against $43,042,000. There has been comparatively little change during the past year.

* Preliminary figures

Based on the world's total production of crude petroleum from 1857 to 1916, inclusive, the United States produced about 60 per cent. of the total, as compared with more than 65 per cent. in 1916. Russia's percentage in 1916 was approximately 16 per cent. of the world's total as compared with 27 per cent. from 1857 to 1916, inclusive. The growing importance of Mexico in oil production is shown by the fact that it produced approximately 40,000,000 barrels in 1916, or nearly 9 per cent. of the world's total production, as compared with a total production of 163,000,000 barrels from 1857 to 1916, inclusive, or about 2½ per cent. of the world's total production for that period. The world's production from 1857 to 1916 was 6,478,944,229 barrels of 42 gallons. Of this, Canada produced 23,907,197, or 0.37 per cent. of the total.

Cost per week of a Family Budget of Staple Foods, Fuel and Lighting and Rent, in Terms of the Average Retail Prices in Sixty Cities in Canada

INCREASED FACTORY PRODUCTION

Analysis of the Problems Facing Canadian Manufacturers —Production, Marketing, Finance, Organization

BY H. VICTOR BRAYLEY.

The question of increased production in our factories, combined with a higher percentage of net profits, is possibly one of the most interesting subjects to the majority of the readers of *The Monetary Times*, as many of the readers are shareholders in some manufacturing company, and a number, also, are directors of such companies.

Some of the different problems that face manufacturers are: (a) Production. (b) Marketing. (c) Finance. (d) Organization.

Production can be grouped into three classes: 1. Location of plant. 2. Buildings and equipment. 3. Manufacturing costs.

Location of Plant.

The suitable location for a manufacturing plant depends on: 1. The cost of power—whether steam or electric. The question as to whether power costs are of great importance or not depends on the quantity of power required and the percentage of the cost of power to the total manufacturing cost. Also, an important point to be kept in mind is the fact that transportation and deliveries often become a most serious question where steam is used. A large number of plants faced a serious problem last winter, owing to the shortage of coal, due to the conditions of our railways on account of storms and lack of motive power.

2. The supply of labor, whether skilled or unskilled; adaptability to new methods, whether plentiful or not; housing of employees, cost of living, etc.

3. Transportation.—The two important questions in regard to transportation are:—

(a) What will be the cost of freight and handling of raw materials to the factory or plant?

(b) What is the most suitable location as a centre for transportation and which at the same time will allow of transportation at the lowest possible cost to the wholesaler, retailer or consumer? All freight charges should be kept as low as possible so as to give the benefit of this saving to the workmen, the manufacturer, or the consumer.

A large number of manufacturing plants are so situated that any further expansion of their business is prohibited, owing to the extra heavy charge for transportation which would be incurred if their market were extended.

Buildings and Equipment.

The cost of production in most manufacturing plants is considerably higher than it would be if the plant were laid out more efficiently, and in most cases the present layout can probably be remodelled in such a way as to reduce costs and increase production. A poorly laid-out plant will make the cost of handling work during process of manufacturing so high that any further increase in production would make the manufacturing unprofitable. Consequently, one of the most important points to consider in housing a manufacturing plant is to lay out the plant so that the handling of work in process will be reduced to a minimum, and to have the buildings and equipment so arranged that, in the event of an increased business necessitating an expansion of the plant, the handling of material can still be kept at a minimum at all times.

Very few manufacturers, when constructing a new plant or extending their old one, give this question sufficient attention, and, therefore, neglect getting advice from an expert, and through this shortsightedness cause an unwarrantably high cost in manufacturing. The writer is of the opinion that the layout of a great many manufacturing plants can be so rearranged that the cost of handling can be materially reduced, and that the saving made thereby will soon pay for the cost of the rearrangement.

The equipment for a new manufacturing plant should be given the utmost study, not only by the officials of the company, but also by outside experts familiar with the class of manufacturing for which the equipment will be used. The design and layout of equipment installed will have a bearing on power costs, labor costs, maintenance and renewal costs. A saving on any one of these costs may decide the question as to whether or not the company will be successful.

Another matter in which equipment has a strong bearing upon profits is in the question of insufficient production. That is to say, a small production will oftentimes necessitate so high a cost of indirect expense, burden or overhead, that profits will cease, whereas a larger production, even with a slightly larger amount of burden or overhead expense, would show a profit. Very often insufficient production is due to unbalanced equipment; i.e., one department equipped to turn out 1,000 units and the next only 500, causing 50 per cent. of the equipment in the first department to be wasted.

Many manufacturing plants can have their present equipment rearranged with a very small outlay of money so as to increase their production by from 10 to 20 per cent., and this without increasing their cost of labor for each unit manufactured, and in many cases decreasing the cost per unit. It would pay a number of manufacturers to move their present plants to a more suitable location, where a saving could be made in transportation, and where they would be able to open up larger markets, reduce power costs, and at the same time construct a new plant in such a way as to reduce the cost of manufacturing.

Manufacturing Costs

Many executives of manufacturing companies look upon cost systems as a lot of "red tape" and extra work to keep a number of accountants and clerks in employment. They are right—(1) If the manufacturing costs do not tie up with the commercial accounting. (2) If the officials do not study and make use of the figures so obtained. (3) If a monthly manufacturing report or statement is not presented to them and so arranged that it will clearly show the cost of sale for each article manufactured.

The only value of a cost system is the information thereby obtained, which enables officials to determine where costs can be reduced, the margin of profit that can be added to fix the selling price, and the party or parties upon whom to fix the responsibility for any high cost. If the cost system is not used by the executives for these purposes, it is a waste of money and time to install and operate one.

The procuring of the charges for direct labor and material should be so arranged that the direct costs can easily be arrived at for any unit manufactured at a time when said unit is ready for shipment. Direct costs are simple to procure. It is the indirect costs which are hard to allot in proportion to each unit manufactured. First, there is the accumulation of these indirect costs, which are also termed "factory expense," or "burden." Secondly, their allotment to the unit manufactured. Their allotment is based either on direct labor hours or wages, machine hours, tonnage, or number of units manufactured during the month. It is often a question for experts to decide what class will be used to distribute indirect charges.

If the distribution is not based on the right factor for allotment to each unit manufactured it will not give the correct cost of sales for such unit. A most important factor to consider when calculating costs is to see that they include the depreciation on buildings and equipment. The writer has come across cases where insufficient depreciation, and sometimes none at all, has been charged into the costs. In some cases, if the proper depreciation had been charged to cost of production, it would have shown that the cost of manufacture was too high to procure a profit. Apparent profits may be shown for a few years if insufficient or no depreciation has been allowed, but eventually a loss will be shown by the manufacturer.

Upkeep of a Plant.

The writer favors keeping a plant up to the highest possible point of efficiency, charging all maintenance and minor repairs to monthly operating costs, and to set aside monthly, as a reserve on plant and equipment, a certain percentage on cost of plant and equipment. Renewals and large repairs would be paid out of this reserve account. This reserve would be added to monthly until it equalled the book values of plant and equipment shown in the fixed assets.. If the manufacturer does not procure a statement of the monthly costs his business is not under control, in which event it will very likely prove a failure, as no executive can intelligently operate a business not under his control. He will eventually not only lose his business, but his reputation as well. The essential factor for success in business is a knowledge on the part of the chief executives of accurate cost figures for the month, combined with a monthly balance sheet.

Manufacturing costs should be shown for each unit manufactured, and should be divided as follows: (a) Direct material. (b) Direct labor. (c) Overhead (indirect labor and material, expense or burden). (d) Total gives the cost of sales.

As to Marketing.

One of the first questions to be taken up in manufacturing is the available market for the manufactured article. The neglect of this question often means a failure in time. The size of the market will decide the size of plant and equipment required for present and future requirements. The writer has seen manufacturing plants which were from 50 per cent. to 100 per cent. larger than their requirements, the market not being there to absorb the production. This meant a large amount of capital tied up unnecessarily in fixed assets.

Another error made is in not studying the requirements of a possible market and endeavoring to manufacture a high-priced article when the market demands a low-priced one, or vice versa.

Marketing merchandise depends on a combination of the four factors: (a) Quality for the price. (b) Selling or distribution. (c) Advertising. (d) Service.

One is as important a factor as the other. Without the quality and workmanship behind the merchandise it is a waste of time and money to employ salesmen for the distribution of the merchandise or to advertise it in order to have the consumer purchase, for it will not repeat. The quality for the price of the merchandise depends upon the ability of the manager of production to turn out an article at the lowest possible cost, which is, at the same time, the best value possible for the selling price procured, and which will compare favorably with the goods sold by any competitor in a similar line at the same price.

Choosing the Right Salesmen.

The selling or distribution of merchandise depends largely upon the sales manager's ability in picking out the right salesmen, having them believe in the merchandise they are selling, and operating his department at a low percentage on gross sales, thereby keeping down the cost of the article sold. Selling costs are important to the sales manager as manufacturing costs are to the production manager. He must pay his salesmen a good remuneration, in return for which he must see that he procures their whole time and attention, with the most productive methods of selling possible. Distribution of merchandise can best be procured by systematically organized selling after the sales manager has obtained an intelligent idea as to what is the maximum consumption of the merchandise in each locality or salesman's district and the real ability of each salesman employed.

There are a great many men in salesmen's positions who are not fitted for salesmen, as their ability lies in another line of work. Others have the selling ability, but lack training, and possibly a large number know really very little about the merchandise they are selling. A salesman should first know all about the material he is selling and the reasons why the manager of production claims that his goods are superior in quality and workmanship to those of his competitor. A real salesman sells on service and quality, not on price alone. A salesman should always bear in mind that his company is judged by their customers largely from his actions, appearance and ability. Every salesman's remuneration should be based upon the profit that is made on the merchandise which he alone sells, and not simply upon the quantity or total value of the goods he sells. For example, a salesman selling $1,000 worth of goods with $250 profit is worth more to his firm proportionately than the man who sells $2,000 worth of goods at $300 profit.

As to Advertising.

Good advertising is that which will give a maximum increase in sales for the lowest percentage of expenditure for advertising, based on the gross sales. There is possibly more money wasted in poor advertising than in any other branch of business. This is due largely to the fact that there is no basis on which to estimate the results that can be obtained from advertising. In manufacturing and selling, past cost figures can be used to calculate very closely as to future results. The best method to decide upon the amount of money to be allotted to advertising is to allow a certain percentage on gross sales for a given past period.

There are a great many ways to advertise after the amount to be spent has been appropriated. It is most important that every means should be taken to see that the best mediums are employed, as the use of the wrong mediums of advertising is often found to be one of the reasons why sufficient sales have not been procured for the amount of money expended. When the best methods of advertising have been decided upon it is most important to procure the right style of advertising and the proper territory in which to place it.

The executive who is responsible for the advertising should not only have exceptional ability to decide upon the most effective style or form of the advertisement, but should also be thoroughly familiar with the requirements and mediums of advertising which will appeal to the prospective consumer in each locality. This man also has to have a very vivid imagination and originality, combined with an open mind, in studying matters pertaining to advertising.

The advertising executive should know thoroughly all the details as to the quality and workmanship of the merchandise he is advertising, combined with statistics of past gross sales by week, month and year in each locality. A good sales manager is not very often an advertising manager any more than a production or manufacturing manager is a good sales manager. The three positions should be filled by men of totally different abilities. It will pay a great many manufacturers to have the advice of outside experts who make a specialty of advertising, whether this advice is followed or not, on all advertising, thereby getting the benefit of the experience of a large number of companies, among them, possibly, of some in a similar line.

Salesmen can only procure distribution to the retailers; it takes quality of merchandise and proper advertising to move the merchandise from the retailer to the consumer. If the merchandise is sold direct from the factory to the consumer, it still requires both salesmen and advertising to get a proper and profitable distribution of the article manufactured.

Matters of Finance.

I do not think I am far out in making the statement that very few men responsible for the financing of a company are furnished with the proper information to enable them to figure accurately the future requirements for financing and what future earnings can be relied on for payment of loans made for financial purposes.

The manager of production or the executive who has charge of the manufacturing end of the plant should be in a position, by getting accurate monthly costs, to know the amount of money that would be required for labor, raw material and indirect expense or burden of each branch of the business for a certain period in advance.

The sales manager or executive who has charge of the sales should be in a position to advise the executive in charge of the finance what it will cost to sell a specific quantity of merchandise in any locality. This is based on accurate selling costs for previous performances and a knowledge of the market possibilities in each locality. If the chief executives of the several branches of the manufacturing company are all competent men, they can, at a meeting with the financial executive get a fairly accurate estimate of the future financial requirements. If a business is well under control in every branch it should be a simple matter to make up a budget in advance for each period, and this budget can be lived up to, as far as expenditures go, if the executives of each department have the ability for the work that they are called upon to do.

The fact is that every business of any size should be operated on a budget or appropriation system. These budgets or appropriations can be made up on the 15th of the month previous to that for which they are compiled, and within the next ten days can be approved of by the board of directors. This places the directors in a position to really direct the affairs of the company, and at the same time enables them to procure a clear insight into all the problems of their business. I should judge, however, from my observations in Canada that there are few manufacturing concerns operated on these lines.

Besides the fixed assets, there are two other ways in which money can be tied up, i.e., in inventories and in accounts receivable. If there is team work between the manager of production and the sales manager they should know fairly accurately how often they will turn over their stock of finished merchandise in a year, and, therefore, will require to carry only sufficient merchandise to make this turnover. In a great many lines of manufacturing the inventory carried is too high as compared with their turnover. Some businesses turn over their merchandise every month and some only once a year. If the finished merchandise is kept within bounds and the manager of production has his stores under control with perpetual inventory in operation, he should, if he has the ability, keep his raw material and finished merchandise down to such quantities that he will not be overstocked in any one article.

Proper Accounting System.

The other way in which working capital is tied up is in accounts receivable. Very few companies realize the importance of operating a simple system of accounting whereby collections are closely followed up. There is not sufficient attention given by the directors and chief executives of the majority of companies to the ratio that accounts receivable bear to the gross sales, based on the terms of sale. For instance, it is a simple matter to know whether accounts receivable are too high or not by making a comparison of the accounts receivable as shown by your monthly balance sheets with the gross sales for the same period. If your accounts receivable are over 50 per cent. of your gross sales on a 30 days' term of sale, your collections and accounting pertaining to collections have something radically wrong with them. A proper system of accounting, giving a condensed report monthly to the executive in charge of the finance, will enable him to make use of these reports to get after the men who are responsible for any weakness shown thereby, and so keep the working capital tied up in accounts receivable at a minimum.

It is the duty of the financial executive to see that his business is under proper control in that he, on account of his position, is called upon to arrange for sufficient funds to operate the different branches of the business, and by having the business under his control he is kept fully advised of the following: (1) Whether sufficient profit is being made on the cost of manufacturing after taking into consideration the cost of selling and administration. (2) Whether the cost of selling is increasing or decreasing per unit sold. If increasing, he should immediately find out the reason therefor.

Through proper control, obtainable only by proper accounting methods, the accounting department should be able to keep in close touch with the value of inventory on hand, whether of raw material or finished merchandise, and whether collections are being kept up to date or whether they are increasing more rapidly than the sales. By having this information laid on the desks of the chief executive and financial executive at frequent periods, or whenever required, they can immediately stop any course of action which may have a tendency to tie up capital unnecessarily or cause a loss. It is the duty of these executives to report any weaknesses immediately to the board of directors or their chief representatives.

In my opinion, the executive responsible for the financing of a company should see all pay-rolls and pass on all purchases over a certain amount, as he is responsible for finding the money to pay salaries and wages and for material purchased.

Features of Organization.

The term "organization" is used here as meaning the classification of the employees, from the president down, so that responsibilities will be fixed throughout, at the same time allotting the class of work for which an officer or other employee is paid, whether it is the general manager or the office boy.

A great many heads of departments and executives, who are being paid high salaries as executives, devote a large part of their time to looking after small matters and detail work which could be as well taken care of by an employee receiving a much lower salary, and, consequently, the remuneration paid to such a party is being wasted in that the company is not getting the full value for their money which they should derive from the ability, experience and knowledge of the executive so employed.

One of the great wastes going on in manufacturing concerns to-day is the overlapping of work, and consequent waste of time, both in the office and factory, in the planning of future work in the factory and the lack of efficient service in the office and clerical end of the business occasioned by high-priced employees doing work that lower-paid employees could do.

When an organization is arranged so as to fix the responsibilities, the inefficient employees, wasters, etc., are soon shown up, as are also those who are doing work or occupying positions for which they are not suited, and whose ability and workmanship would probably procure higher individual results if placed in other occupations.

With the right organization in the factory or office, team work can be arranged, and groups of two or more can be compared with other groups as to cost and value of work. The proper organization will also bring about co-operation amongst employees. Possibly one of the most frequent causes of failure in a great many concerns to-day is the lack of co-operation, particularly on the part of those who show jealousy, or who are inclined to "play politics." There is probably more politics, in proportion to the amount of business done, in manufacturing concerns than there is in government work.

A great many heads of departments and branches allow their judgment to be swayed by personal feeling and prejudice, with a consequent tendency to grant positions to those whom their better judgment would show lacked the ability to fill them. It is, perhaps, one of the hardest things for any man to be broad-minded enough to prevent his personal feelings from swaying his judgment in business matters.

The writer feels that if those who read this article will seriously consider and carry out at least one of the items mentioned it will improve manufacturing conditions in Canada, as it will mean increased production, with reduced costs, and a better control of their business, and a great many failures will be prevented. The trouble with us all is that we are inclined to avoid unpleasant work, and a man to be a successful director, shareholder or chief executive must be aggressive, even though every aggressive move he makes means that he is compelled to work that much harder and assume greater responsibilities.

PREPARE FOR TRADE AFTER WAR

Well Devised Plan of Action is Necessary—Government Has Taken No Action

BY HON. FREDERIC NICHOLLS.

Perhaps nothing is more essential at this stage of Canada's history and development than constructive statesmanship that will take heed of the future and prepare for it, in addition to guiding the ship of state through the tempestuous times we now live in. In the marts of trade in the banking house, and in all places where men of business most do congregate, one of the common topics of discussion is in regard to trade conditions after the war. All realize the serious import of unpreparedness, and yet nothing has been done, collectively, to even lay the first plank for the construction of a platform from which a definite and virile policy can be advocated. After the war, the deluge, is a prevailing impression, and, while there is yet time, no preparations are being made to meet the certain dislocation of trade and possible panic that may threaten.

To-day, hundreds of millions of dollars are being expended in this country by Great Britain and her Allies for war materials and natural products. To-morrow this inflow of gold may cease, our trade become stagnant, and through lack of earning capacity payment of the interest on our debt may become a serious problem. Of what avail is a war profits tax or an income tax when war profits shall be non-existent and income shall become shrunken? The people of Canada are too prosperous to-day to look ahead for to-morrow, and the government is too occupied with present problems and the election campaign to desire to attend to matters that are not at the moment pressing and which can be pushed aside with promised consideration to-morrow—and to-morrow never comes.

Is temporizing wise; is it constructive statesmanship; and are those in authority awake to a realization of the peril which threatens us? Is it not as incumbent on a nation to look ahead in order to safeguard and protect its people as it is for the head of a family to make provision for his dependents by life insurance or other means? It is true that Canada has astonished the world with an exhibition of its capabilities, its latent resources, and its generosity. The numbers of our volunteer forces, as compared with the total available, evidences the highest form of patriotism. The totals of our war loans, including the late Victory Loan, has evidenced the desire of our people generally that Canada shall play a man's part in the terrible conflict, which has now waged for three years, and the end of which is not in sight. Our subscriptions to the Patriotic fund, Red Cross Society, sailors' relief funds, and for innumerable other worthy causes has shown the spirit of the people, and the magnitude of the services rendered in so many ways by the women of Canada has proved them to be fit mothers and sisters of courageous manhood.

Is this sufficient, however, great though it may be? Shall we adopt the motto, "Sufficient for the day is the evil thereof," or the more trite and homely one, "You will never miss the water till the well runs dry"? After the war the present sources of our income will to a large extent fail us and run dry, and we must look far afield for new sources. After the war great industries will have their machinery lying idle, and many thousands of work people now employed in the production of war materials will likewise be idle, and the ranks of the unemployed will be augmented by the tide of returning soldiers, who must be found suitable employment, so that after fighting to protect us in our right to live as free people they may honorably, by their labor, add to our future prosperity. One cannot make bricks without straw.

A factory cannot operate without orders; the farmer and the lumberman cannot produce without customers; and the government cannot "carry on" without an income from taxation that will provide the public with efficient public service, public utilities, and transportation and educational facilities. The ability to pay taxes necessitates the earning of an income, and the average income is based upon prosperous commercial conditions which afford employment to capital, brains and labor. Is it, then, not incumbent on the State to assist in the development of overseas trade to take the place of export war orders when the latter cease?

Special Committee Appointed.

The significance of the present situation was debated in the Senate during its last session and a special committee on the conservation of Canadian trade was appointed. This committee held many sessions and listened to evidence given by men of outstanding ability, who were invited to present their views. In due course the committee submitted a report, which was unanimously approved by both sides of the House. A copy was forwarded to the Right Honorable the Prime Minister, with the request that due regard and consideration be given to the question of overseas trade to replace in part the present great volume of orders for war materials. It may be asked, "Where can trade be found to replace the war-time orders?" and the question may be answered by quoting from one of the speeches in the Senate debate:—

"The countries now at war, however, particularly those that have been devastated in Europe, will require to expend immense sums in reconstruction, and will become customers of those countries which are most ready to supply the requirements promptly and at a reasonable price. In this country we have had little experience in either looking for or catering to an export trade, and if we desire to share in the volume of business that will be offering overseas we can make our preparations none too soon."

Competition with Other Countries.

It may also be asked, "Have our manufacturers the ability to produce in competition with other countries?" and again the question may be answered by another quotation from the same debate:—

"Since the war, as I have pointed out, we have manufactured and shipped upwards of six hundred millions of dollars worth of munitions alone, and I speak with knowledge when I say that the production of munitions is the most intricate, the most delicate, and the most precise class of manufacture that could be undertaken. It was an entirely new industry to Canada, and it is a credit to Canadian industry that in such a short time so many existing factories were recognized and so many new ones estabilshed that have turned out such an immense quantity of munitions, and thereby brought to Canada so large a sum as six hundred million dollars for munitions alone. If the manufacturers, when the need arose, were able to accomplish such results, I take it that they would be equally resourceful in manuacturing many other lines of goods for export that will be required by the European countries, we hope, at no late date; but in order to bring this about some systematic method of state aid will have to be adopted."

It is now generally known that Canadian manufacturers have shown wonderful executive and constructive ability in the manufacture of munitions, and it is also a fact that they are making them—at least selling them—at a lesser price than is obtained in Great Britain and the United States, and, consequently, there should be no misgiving as to their ability to cater for the world's trade in any branch of industrial enterprise.

Work of Other Nations.

Germany has already set the pace in preparedness for after-war conditions, and Sir Robert Borden, in speaking at Manchester during his last visit to England, said:—

"It is believed that the industries of Germany will be supported and developed in future by a more thorough and powerful state organization than ever known."

Great Britain has also taken action, and, on the recommendation of a special committee appointed by parliament, the British trade corporation has been organized to assist in obtaning orders from abroad for British manufacturers and traders and to grant financial facilities for the execution of such orders. The United States has also taken action by the formation of an export trade organization, whose objects are the same as those of the British trade corporation. Japan and Australia have also taken action along the same lines, and is it fitting that Canada should be the only country to lag superfluously on the stage? If it is wise in times of peace to prepare for war, it is equally essential in times of war to prepare for peace, and "If it were done, 'twere well it were done quickly." The financial, industrial and commercial interests should co-ordinate their efforts, and, in co-operation with the government, evolve some well-devised plan of action to the end that prospective loss of trade, which may threaten the welfare of the community should, so far as possible, be offset by an official or quasi-official organization, which, acting on behalf of the trade interests of Canada as a whole, will accomplish results that individual efforts could not possibly achieve.

Call to Action.

In January of last year the fourth national foreign trade convention was held at Pittsburg, and in the report of the proceedings appears the following passage from an address by one of its members:—

"As I have pointed out, export trade development to-day has three great needs. The first is leadership; the second, a definite policy; the third, the acquirement and dissemination of all export knowledge available. Leadership logically falls to the bureau of trade and commerce. Being a governmental department, it commands the respect and confidence of all elements of our commercial life."

The Right Honorable Sir George E. Foster, our own minister of trade and commerce, some months since issued an eliquent "Call to Action," but, so far as I am aware, the call has not been answered. neither has any action yet been taken. We know that if we prepare the land and plant the seed a greater or lesser crop may be expected, but if the land be neglected and seed not planted, we may be reasonably sure of a crop of thistles. The government issued the call to action, but has itself taken no action. Government leadership is essential, and it will be found that the business community is both ready and willing to rally round them. It is admitted that most momentous problems now occupy their attention, but that is no reason why a future problem of such momentous import should not be given full consideration, otherwise we cannot expect to reap a harvest where we have not planted the seed.

Through carelessness and inefficiency there is wasted in garbage every year throughout Canada food to the value of $56,000.000, or about $7 per capita of the home population, according to estimates of the Canadian food controller. Here are his figures: Estimated annual cost of feeding Canada's overseas soldiers, $50,000,000; estimated annual preventable waste in Canadian garbage, $56,000,000; estimated annual saving possible by preventing garbage waste and further reducing cost of living by five cents per head (total, seven cents per head), $204.400 000.

‡1918	6,193	640	193	108	1,679	838

* Six months ended June 30th. † Nine months ended March 31st. ‡ 7 months to October.

If the average number of persons for each entry, 2.5, be approximately correct, then during the above period 19 per cent. of English, 16 per cent. of Scotch, 20 per cent. of Irish, 29 per cent. of American and 29 per cent. of Continental immigrants made entry for homesteads in Western Canada. It will be observed from the foregoing that the number of immigrants represented by the homestead entries in the Western Provinces is much larger than the number on whom bonus was paid.

---

(1) While the Beaver is developing the Kirkland Lake Mine, dividends will be uncertain. (2) Company's fiscal year, May to April. The capital stock was decreased 25 cents per share by payment in cash to stock holders. (3) This company acquired the assets of Cobalt Townsite, Cobalt Lake and City of Cobalt Mining companies, and Cobalt property of Townsite Extension Mines, and Little Nipissing Mine on April 1st, 1914, which companies have been wound up. The City of Cobalt paid, in the years 1908 and 1909, a total of $145,000 in dividends. The Cobalt Townsite was, and the Mining Corporation of Canada is the operating company, the shares of which are owned by English companies whose shares are listed in London. The capitalizatio of the Mining Corporation in London is £1,660,050. (4) Formerly known as Foster Cobalt. (5) On April 29, 1912, this company took the property of Cobalt Central, purchased at sale from the liquidator of Standard Cobalt Mines, Limited, the Canadian operating company. The Penn-Canadian is not a re-organization of the old company, but an entirely new company. Cobalt Central has not been in operation since May, 1910, when it went into the hands of a liquidator. (6) Seneca Superior was a lease on Peterson Lake and has now reverted to parent company. (7) On October 21, 1909 this company took over the Right of Way Mining Company, Ltd., together with a controlling interest in Cobalt Merger, Limited, paying therefor 1,685,500 shares in the new company. Shareholders received 3 shares in the new company for each 1 they held in the old. For the quarter ended December, 31, 1909, the new company paid a dividend of 2%—$33,710. During 1910 the company paid three quarterly dividends of 2%, and declared a fourth dividend, payable on January 30th, 1911. Every quarterly dividend amounted to $33,710, making a total for the year of $101,130. Since then, dividends of $84,275 have been paid as noted in the table above. Dividends paid by the Right of Way Mining Co., March 5th, 1907, 7%; July 31st, 1907, 7%; May 5th, 1908, 7%, September 15th, 1908, 7%; April 1st, 1909, 8+9%; May 20th, 1909, 10%; July 1st, 1909, 6%; October 1st, 1909, 6%. The Right of Way Mines, Limited, has paid dividends of 2%: December 31st, 1909, April 1st, 1910, June 30th, 1910, September 30th, 1910, December 31st, 1910, December 2nd, 1911; and 1% in November, 1914. (8) The Temiscaming & Hudson Bay Company, on September 15, 1909, transferred 9 Cobalt claims to the Hudson Bay Mines, Limited, for a consideration of 3,000,000 shares of that company's capital stock. The former company in that way controls the latter company. (9) The name of the Hollinger Gold Mines, Ltd. (incorporated June 28, 1910, with authorized and issued capital of $3,000,000, par value of shares, $5), was changed to Hollinger Consolidated Gold Mines, Ltd., upon its amalgamation with Acme Gold Mines, Ltd., and Millerton Gold Mines, Ltd. The amalgamation became effective on May 25th, 1916. The capital stock of Hollinger Consolidated is $25,000,000, divided into five million shares of $5 each, of which $24,600,000 have been issued. The Hollinger Consolidated Co. paid dividends at the rate of 1% every four weeks, which is equal to 4%, or 52% per annum on the stock of Hollinger Gold Mines, Ltd., which was converted into Hollinger Consolidated shares on the basis of four Consolidated shares for one of the old shares. The last dividend of Hollinger Gold Mines, Ltd., was No. 48, paid on June 16th, 1916. Commencing July 14th, 1916, and every four weeks thereafter, Hollinger Consolidated paid a dividend at the rate of 1% until April 23rd, 1917, since which date no dividends have been paid. Prior to their amalgamation with Hollinger Gold Mines, Ltd., the Acme and Millerton paid no dividends. (10) First dividend paid April 1st, 1914.

(*) Of this 231,143 shares are held by trustees for the benefit of the company, and do not bear dividends.

The Drummond and O'Brien companies are practically close corporations: the dividend figures have not been made public.

All the above figures are official and have been supplied to *The Monetary Times* by the individual companies.

CANADA'S NEED OF POTASH

To Increase Production of Food—Question of Research—Germany's Potash Monopoly

BY JAS. P. MURRAY.

The great message given to the world by all governments during the last three years is that important one of conserving food. That message should have been given many years before the war. The continual shrinkage in the yield of field crops should have had the nations' attention. Here are a few facts which can be amplified by any enquirer:—

Twenty-five to thirty years ago the wheat fields of the Western States yielded 38 to 40 bushels to the acre. Why did that yield fall to 10 to 15 bushels?

In our own prairie lands twenty years ago the yield was equal to or greater than that. This year, while the yield in some places is given as 25 bushels, the average is expected to be about 19 to 20 bushels to the acre.

To keep up the quota, or to increase it, means that annually a very much larger increase of acreage must be brought under the plough. But even so, that will not improve the productiveness of the land already tilled. This virgin land may make the farmer richer, but not the country. In addition, he uses more land, time and labor to produce as much as his original acreage did years before.

Though wheat is referred to here, yet in their various relations all other grain and root crops deserve consideration. Nature will not be interfered with when life is concerned, animal or vegetable. The land is like a man. If you overwork him and only partly feed him, you do not expect par value in his work. So, if you take out of the land that which is essential to plant life it cannot be expected that that land can produce as abundantly as before. Opinions seem to differ as to what that plant food really is. Some experts insist that nitrates and phosphates are the most valuable, but the extraordinary capital investments being made in the United States (costing much over a million dollars for one plant alone) to procure potash from the seaweed, kelp, strengthens the point to which attention is called by this article. Even allowing that other fertilizers are necessary, there are enough qualified authorities who give an average of 80 pounds of potash to an acre required as land food for vegetation. A lot of time and labor is given to collect, load, cart, unload and spread manure as a fertilizer, yet twenty tons of manure must be dug into the land to supply from manure the potash needed. Think of it! Twenty tons of manure handled five times and dug in to get 80 pounds of potash. But, "Oh," says the farmer, "I have all the manure from the cattle byres and the stables." If the same quantity of the leaves which fell from the trees were gathered, a far better fertilizer would be had.

What is Potash?

From the earliest days, ever since intelligence has been applied to the reproductiveness of land by returning to it that ingredient necessary to plant growth, every means has been tried to produce potash. What is potash? The extract of wood ashes, when boiled down, forms potash. This product consists of crude potassium carbonate, and gives the name to the element. To chemists it is known as K_2O. To get this same element from other sources has had attention in the research laboratories in many countries.

So that some idea of how much potash is absorbed by various grains and roots, the following table has been prepared recently by a well-known chemist who is associated with one of the important government farms:—

	Yield per acre, bushels.	Grain, pounds.	Straw, pounds.	Potash taken, pounds.
Grains—				
Wheat	30	9.3	19.5	28.8
Barley	40	9.8	25.9	35.1
Oats	45	9.1	37.0	46.1
Corn	30	6.5	29.8 (stalks)	35.13
Beans	30	24.3	42.8 (straw)	66.11
	Tons			
Meadow hay	1½	. . . .	. . . .	50.9
Clover hay	2	. . . .	. . . .	83.4
Roots—				
Turnips	17	108.6	40.2 "	148.8

Mangels	22	222.8	77.9 "	300.1
Potatoes	6	. . . .	. . . .	76.5

That shows nearly 90 pounds, on an average, to the acre of potash absorbed by eleven kinds of crops, those measured by bushels requiring, on an average, one pound and a quarter of potash to a bushel. Unless that quantity is returned to the ground, it is a foregone conclusion that the following crop, no matter what it may be, will be below the possibilities. Potash costs less to handle than manure and is cleaner in every way. It needs no wagon hauling once it is on the farm.

As is shown, on an average, an 80-pound bag to an acre fills the need, and with such grains as wheat, oats, barley, etc., it can be fed to the ground with the seed grain.

The market value of potash is not a point in this article, because, if it is beyond the reach of the ordinary farmer, the government should supply it on the same conditions as it supplies seed grain.

Potash from Feldspar.

Canadian felspar (Feldspar) has been proved to contain 14 per cent. of K_2O, and it is free from impurities. It permits of simple and inexpensive quarrying under facilities not met with in any similar industry, or which can return equally beneficent results.

Some people who have not given deep thought to the essential needs of the country, may, perhaps, pass over the importance which potash holds in this present war, and before it.

Germany is said to hold the world monopoly for potash. The great Magdeburg-Halberstadt rock salt basin of Stassfurt and of deposits in Galicia, Chili, Persia and Eastern Asia, all under German control, was one of the reasons why Germany satisfied herself that she could starve her enemies —in time—because they would not be able to obtain the potash so necessary for agriculture.

The principal German source of potash is the "Carnallite" formation, which underlies the "Kiserite" beds at Stassfurt. It requires mining operations to raise it from a depth of from 1,100 to 5,000 feet.

The purest never gave more than 7½ per cent. of K_2O, and had to be freed of sodium chloride, magnesium chloride, soda, bauxite and alum. Three of these are detrimental to agriculture, and their removal adds considerably to the cost of producing pure potash. Through investigations made in 1862 by Dr. Frank, assisted by Justus von Liebig, potash was proved to be a valuable fertilizer. Owing to these researches the cost of production was greatly lessened, the result being that the value fell from $100 per metric ton in 1862 to a third of that price in 1864. Since that time Germany has held the world's monopoly for potash.

In Britain and United States.

It is only in recent years that Britain and the United States have commenced to value the need of potash in agriculture. Statistics show that England used in 1901 only 55 pounds to 100 acres, increased to 150 pounds in 1911; Scotland used in 1901 only 227 pounds to 100 acres, increased to 379 pounds in 1911; United States used in 1901 only 40 pounds to 100 acres, increased to 126 pounds in 1911.

While the quantity taken by the United States does not look big as given per acre, it took 258 vessels of 4,000 tons each to carry the 1,032,127 tons of potash used by the United States and Hawaii in the year 1911.

The potash industry forms a realm of research for the chemist and the geologist. For agriculture, and hence for the maintenance of the people, it is a sine qua non. There is scarcely a trade in industrial activity but which uses potash in one form or another. Photographers, painters, dyers, cleaners, bleachers, soapmakers, electricians, all need it. It is used in fireworks, gunpowder, matches, glass, in preservatives, to cheapen production of artificial cold, and for the extraction of gold from the ore.

The United States has offered as an inducement in research a large sum to the citizen who can produce potash from one or more of the natural resources of that country, and in quantities which will give a sufficient supply for the farming necessities. Why does not Canada, having quantities of latent supply, do likewise?

A Nova Scotia wool dealer last year sold a consignment of 14,606 pounds of washed wool in the United States at 95 cents a pound.

The War Is Bringing a Tremendous Demand For Executive-Trained Men

These trained business men are greatly needed now. Think then, how much greater the need will be when the War is over!

THE men who stay home and direct the industrial energies of our country to greater effort and efficiency are no less patriots than the boys at the front. True, it's the man behind the gun who will bring peace — but it's the man behind the man behind the gun that feeds him—clothes him, equips him, sustains him, pays him.

You men who head big businesses need further training to help you carry the additional burdens.

You men who head departments need a keener insight into business fundamentals to qualify you for the chairs of those ahead.

You younger men whose feet are still on the lower rungs of the ladder need quick, intensified business training for the Executives' places now awaiting you.

Are you going to do your bit by qualifying as a *better* leader—or are you going to let "the other fellow" lead?

Never were such opportunities open to the business man who *knows* the fundamentals of business.

Never did a man have such a chance, selfishly and unselfishly to serve his country and himself.

Never before in the history of the world has such an opportunity existed for any man to bring out the best that is in him by self-training.

How officers are trained for the business army

Acquiring the true fundamentals of business is absolutely essential for real business success. Upon the *degree of training* depends the *measure of success.*

Half way successes think they "know it all"—they have ceased to grow. Mental slackers will not learn by the experience of others. Thus they will *never* grow.

Trained men will win this War. The man who follows the Alexander Hamilton Institute Course is as important a link as the man who goes to a soldiers' training camp to learn to be an officer. He increases his earning capacity by becoming a better leader. He develops his business mind and becomes a better executive—a better *MAN.*

The concentrated experience of thousands of successful men

If you own a business, large or small,—if you ever hope to own one—if you are now helping to run some other man's business—if you have your eye on the man's desk above you, the Modern Business Course and Service will direct your mind and energy along the sound lines that lead to certain success. It helps you avoid those pitfalls which cause business failure. The Alexander Hamilton Institute gives you, in easily readable, convenient and compact form, for absorption in your leisure time, the practical working experience of thousands of successful business men.

Over 65,000 men have enrolled. What our Modern Business Course and Service has done for its subscribers will probably never be known in its entirety. But daily there filter into the headquarters in New York many intensely human stories, showing how men are helped.

One day you hear of a brilliant lad of twenty-two, in a big New York Bank, rising to a $9,500 job and giving credit to the Institute for his success.

The next day a factory manager writes that the Course has just helped him save his firm $7,000 a year and that "a fair slice" of this went to increase his salary.

The next day a man in a Western concern tells how he saved the firm $37,000 a year by one suggestion, and what happened then to *his salary.*

These are only typical cases.

The kind of men enrolled

Presidents of big corporations are enrolled for this Course and Service along with ambitious young men in their employ.

Among the 65,000 subscribers are such men as A. T. Hardin, Vice-President of the New York Central Lines; E. R. Behrend, President of the Hammermill Paper Co.; N. A. Hawkins, Manager of Sales, Ford Motor Co.; William C. D'Arcy, President of the Associated Advertising Clubs of the World; Melville W. Mix, President of the Dodge Mfg. Co.—and scores of others equally prominent.

In the Standard Oil Co. 291 men are enrolled in the Alexander Hamilton Institute; in the U. S. Steel Corporation 450; in the National Cash Register Co. 194; in the Pennsylvania Railroad Co. 108; in the General Electric Co. 300—and so on down the list of the biggest concerns in America.

Advisory Council

Business and educational authority of the highest standing are represented in the Advisory Council of the Institute. In this Council are Frank A. Vanderlip, President of the National City Bank of New York; Judge E. H. Gary, head of the Steel Corporation; John Hays Hammond, the eminent engineer; Jeremiah W Jenks, the statistician and economist, and Joseph French Johnson, Dean of the New York University School of Commerce.

BRITISH WEST INDIES AND CANADA

Opportunities for Expansion of Trade Between the Two Countries

By A. T. DRUMMOND, LL.D.

The proposal for federal union of the different Crown colonies comprised under the term British West Indies, and for closer commercial relations with Canada, has aroused wide interest in these colonies. A feature in this interest, important to us, is the general desire amongst the mercantile community, and in the press, for an expansion of trade with this country. The time appears to be thus opportune for considering how this expansion can be brought about. Federal union of these colonies would, without a doubt, greatly increase their internal development, and the opportunities and facilities for enlarged trade, but, in the past, obstacles have been raised to federal union, resulting from each colony having its own tariff, and control over its own legislation and expenditure, and, it may be added, a jealousy of each other, lest in any federation, certain colonies would secure favored treatment to the detriment of the others. Some of these obstacles, when viewed in the light of Canadian experience under similar circumstances, have greatly less weight than British West Indians appear to give to them, whilst others will be overcome by the large financial resources of the federation, as compared with the limited means of the individual colonies, and the utilizing of these resources for internal developments, so much needed in every part of the federation, and for intercolonial and foreign ocean, cable, wireless and air services, so essential in the interests of trade. Apart from these considerations is the vastly greater prestige which the federation would have in negotiating commercial relations with the rest of the empire and with foreign states. And then the war, which has emphasized the need of closer ties between the different sections of the empire, and of developing their resources to the utmost, is leading many of the foremost men in the British West Indies to join in the determination, now so prevalent in Great Britain and the Dominions and other colonies, that obstacles in Imperial problems must be met in a broad spirit and with an earnest desire to overcome them.

Can Supply to Canada.

What then is the nature of the trade which can thus be expanded, and what facilities must be afforded in order to give effect to this expansion? Each country has very many natural, or partially prepared products which the other needs in large quantity, and cannot itself produce, whilst the British West Indies requires many lines of manufactures which Canada can readily supply. These tropical colonies can furnish us with rubber, balata, unrefined sugar, molasses, rice, raw cotton, cocoa, coffee, cocoanuts, tapioca, arrowroot, tea, grapefruit, shaddocks, oranges, mangoes, lemons, limes, bananas, plantains, onions, ginger, pimento, sweet potatoes, yams, broom, corn, hemp, tobacco, chicle and other gums, cohune nuts, copra and other sources of oil, asphalt, dyewoods, and special timber for structural, machinists' and cabinet work. There is a rapidly increasing consumption in Canada of most of these products far larger than most West Indies people imagine, as they would find if they consulted our trade returns, but some of these products are not yet familiar to us, and others, like grapefruit and sweet potatoes, are thus far, regarded rather as luxuries. With the mango, said to be one of the most delicious fruits of the tropics, and with care, to bear transportation, we are still unacquainted, whilst the yam, which is a common vegetable in the tropics, and can readily be exported, and which Mr. Aspinall, of the West India committee of London, commends to the English people, as much preferable to our potato, is quite unknown to most of us.

On the savannahs of British Guiana, and also in British Honduras there are extensive opportunities for the breeding of cattle, leading thus to the export of frozen meat, of hides and of various by-products. In the forests, especially, of these two colonies, there are numerous woods of great value, including the greenheart, widely known for its strength and for its durability, whether under water or exposed to the atmosphere; the mahogany, crabwood, locust, rosewood and others valuable for cabinet work; and the mora, wallaba, simarupa, cedar and dalli, which, with others, are somewhat softer woods, useful for house construction, shipbuilding, railway work and general plantation purposes. Still other trees supply latex, gums, oils and dyes abundantly, and, like the rubber, balata, sapodilla, logwood, fustic, tonkin bean and cahune and cocoanut trees, are well known to commerce. Most of the trees there attain a commercial size in one-third to one-half of the time required by the slower growing trees of our northern temperate climate. Probably all of these trees will improve with cultivation. The Para rubber especially, being a native of northern Brazil, should do well, and its successful introduction into the Malay Straits Settlements, where there are to-day nearly one thousand estates of an average of about six hundred acres each, devoted to it, and employing towards a quarter of a million laborers, should be an incentive to effort, especially in British Guiana and Trinidad, which lie in about the same latitude.

Openings for Canadian Capital.

With expanding markets near at hand, like the United States and Canada, and with enterprise and increased capital, all of these important natural products can be developed on a vastly greater scale. There can be no question that Canadian capital and activity will be directed in a large measure to the British West Indies, if these Crown colonies enter into a federal union among themselves, and a commercial union with this country. Not only are there ample areas available in practically every colony for the growth of the numerous tropical products already referred to, but many of these now shipped in the raw, or partially prepared state, can be advantageously manufactured, within the country, into one or other of their ultimate products, thus saving large bulk when exported. There are also railways to be constructed, water powers to be developed, transmission lines to be built for light and power, harbors to be created or deepened, steamship services to be established, whilst research will find an almost untouched field in these tropical countries for both old and new materials, and for new methods in adapting these materials to industrial purposes.

Can Supply to the West Indies.

Our manufacturers and merchants have given but small attention in the past to these colonies, with the result that the greater enterprise of New York, Boston and New Orleans has secured for these cities large business which rightfully belonged to Canada. It is not that Canada does not produce, on an ample scale, what the British West Indies wants, and does not consume largely what these colonies produce, but our agricultural interests have found ready and convenient markets in Great Britain and the United States, and our manufacturers have for some years been wholly engrossed with the expanding home market, whilst our buyers of West Indies products have in most cases, preferred to take advantage of the quick deliveries, even at what must be higher prices, from New York and Boston, rather than submit to the delays and risks of importing direct by way of Halifax. To indicate the wide range of Canadian products which we can supply, and which the West Indies require, it is only necessary to mention such articles as wheat, oats, flour, fresh, dried and canned fruits and vegetables, fresh, dried and canned fish, beef and pork in barrels, condensed milk, dressed and undressed lumber, furniture and household appliances, shooks and staves, carts, wagons and automobiles, manures and fertilizers, coal, coke and patent fuel, paints, oils and varnishes, musical instruments, asbestos goods, books and educational apparatus, newsprint and other paper supplies, wearing apparel, boots and shoes, sewing machines, wire fencing, steel structural materials, agricultural machinery and implements, electrical, mining, marine and general machinery, steamships and sailing vessels, railway, telegraph, telephone, wireless and aerial material and appliances, surgical instruments, drugs and the very varied chemical products.

Trade Between Two Countries.

Presently the preferential tariff between this country and these Crown colonies has not led to any very marked extension of business between them. Not only were the concessions in rates of duty small, but prior to the war, manufacturers here were too much taken up with the profitable home trade, whilst transportation facilities, both by rail and ocean, were inadequate, and did not afford that quick dispatch which perishable articles from the West Indies, and agricultural products and manufactures from Canada, required in order to build up an important trade. The war has, however, changed conditions in Canada. With the enormous export business which has resulted from the British and foreign demand for munitions, military equipment, railway material, wearing ap-

PROVINCE OF QUEBEC

Department of Colonization, Mines and Fisheries

The Chief Minerals of the Province of Quebec are Asbestos, Chromite, Copper, Iron, Gold, Molybdenite, Phosphate, Mica, Graphite, Ornamental and Building Stone, Clays, etc.

The Mining Law gives absolute security of Title and is very favourable to the Prospector.

MINERS' CERTIFICATES—First of all, obtain a miner's certificate, from the Department in Quebec or from the nearest agent. The price of this certificate is $10.00, and it is valid until the first of January following. This certificate gives the right to prospect on public lands and on private lands, on which the mineral rights belong to the Crown.

The holder of the certificate may stake mining claims to the extent of 200 acres.

WORKING CONDITIONS.—During the first six months following the staking of the claim, work on it must be performed to the extent of at least twenty-five days of eight hours.

SIX MONTHS AFTER STAKING.—At the expiration of six months from the date of the staking, the prospector, to retain his rights, must take out a mining license.

MINING LICENSE.—The mining license may cover 40 to 200 acres in unsurveyed territory. The price of this license is Fifty Cents an acre per year, and a fee of $10.00 on issue. It is valid for one year and is renewable on the same terms, on producing an affidavit that during the year work has been performed to the extent of at least twenty-five days labor on each forty-acres.

MINING CONCESSION.—Notwithstanding the above, a mining concession may be acquired at any time at the rate of $5 an acre for SUPERIOR MINERALS, and $3 an acre for INFERIOR MINERALS.

The attention of prospectors is specially called to the territory in the North-Western part of the Province of Quebec, north of the height of land, where important mineralized belts are known to exist.

PROVINCIAL LABORATORY.—Special arrangements have been made with POLYTECHNIC SCHOOL of LAVAL UNIVERSITY, 228 ST. DENIS STREET, MONTREAL, for the determination, assays and analysis of minerals at very reduced rates for the benefit of miners and prospectors in the Province of Quebec. The well equipped laboratories of this institution and its trained chemists ensure results of undoubted integrity and reliability.

The Bureau of Mines at Quebec will give all the information desired in connection with the mines and mineral resources of the Province, on application addressed to

The Honourable HONORÉ MERCIER, Minister of Colonization, Mines and Fisheries, Quebec.

How to Acquire Authorization for the Development of Water-Powers in the Province of Quebec

To obtain authorization for the utilization of a Water-Power in the Province of Quebec, application should be made to the Honourable Minister of Lands and Forests.

Water-Falls capable of developing less than 200 H.P. may, under certain circumstances, be bought outright. But those of over 200 H.P. are granted under emphyteutic leases, the conditions of which are upon the following lines:—

1.—The duration of the lease is from 25 to 99 years according to the importance of the water-power and to the amount of capital required for its development.

2.—Payment of a yearly rental—which does not vary during the term of the lease—for the land granted, counting from the date of the signature of the contract.

3.—Payment of an additional yearly charge, or royalty of from 10 to 50 cents per H.P. developed, according to the geographical situation of the water-power, and such charge being payable from the time the power is produced.

4.—The above royalty (art. 3) is subject to revision every 21 years counting from the date of the signature of the contract.

5.—A delay of two years is granted for beginning works and two further years for producing power.

6.—The lessee is under obligation to make a deposit in money, or in securities, as a guarantee of good faith in the carrying out of the contract. Such deposit may be forfeited if the conditions are not fulfilled; but if they were, it may be refunded after a certain time.

7.—Lastly, the grantee must submit plans of his works, mills, etc., to the Department previous to their installation, and when such installation is completed, he must keep the Department informed as to the quantity of power produced.

parel, food supplies, mining products and machinery, Canadian manufacturers have gained a wide experience in the export trade and are desirous of continuing in it after the war is over.

What can then be done to foster and expand it when munitions and military material are no longer required? It cannot be too strongly pointed out that this one market, that of the British West Indies, is comparatively close at hand, is waiting for further development, and possesses these direct advantages that the merchants there are strongly desirous of having more extensive and closer relations with us, and that, already, throughout these colonies there are active branches of two leading Canadian banks, ready to assist with information and banking facilities in developing our trade. But even these advantages would be futile if they are not supplemented by three transportation conditions: (1) More frequent and quick steamship services between the British West Indies and Halifax; (2) very fast through freight services between the Halifax piers, Montreal and Toronto, timed to meet the arrival and departure of the steamships; and (3) through freight rates and charges between the West Indies and Montreal and Toronto, via Halifax, not exceeding those via New York and Boston. To meet the conditions which the special trade requires, there must be cold storage facilities at the shipping points; cool, ventilated accommodation, especially for fruits, in both steamships and cars; prompt transfer at Halifax to and from steamships and cars; and such a fast service by sea and rail that the time taken between the steamship's departure at British West Indian points and the arrival of the cargo in Montreal and Toronto will not exceed fifteen to sixteen days, with a similar time for return cargoes of Canadian products to the West Indies. To effect this, will require organization and close co-operation from start to finish, between the steamship and railway authorities, and a determination on the part of both to develop the business.

Quick Freight Service Certain.

Conditions now exist which make it quite possible to inaugurate a fast freight service, and the Intercolonial Railway management, to whose attention the matter has been brought, proposes to give every consistent aid when the time comes. With the Intercolonial and the new Transcontinental roads forming, together, under Dominion government auspices, a double track system between Quebec and Moncton, we now have a continuous, connected double track from Toronto and westward, over the Grand Trunk and the government railways, to Halifax, except the short distance between Moncton and Halifax. Thus a fast service has become practicable.

The food controller, Hon. Mr. Hanna, has made experiments in fast delivery with car loads of fresh fish from Nova Scotia to Toronto, and they appear to have been successful. Thirteen to fourteen knot steamships should cover the voyage from British Guiana to Halifax in nine days, from Trinidad in eight days, from British Honduras in ten days, and from Jamaica in less than eight days. These facts demonstrate that West Indian products can be delivered in Montreal and Toronto in not much over two weeks from loading of the steamship in West Indian ports. There should, with such facilities, be no reason left to Canadian importers why they should continue to buy so very largely West Indian products in New York and Boston, and equally no reason why our manufacturers and merchants should not develop in the British West Indies a large outlet for Canadian manufactures and agricultural products. The steamships will be forthcoming whenever there is the business in prospect, and, suggestively, there could be, with advantage, two steamship services, each weekly, the one between Halifax, Bermuda, Barbados, Port of Spain and Georgetown, British Guiana and the other between Halifax, Nassau, Kingston and another port in Jamaica, Belize and Guatemala's outport at the terminus of the Guatemala Railway, whilst there would be interinsular steamship services to connect the other islands closely with the through steamships at Barbados, Port of Spain, and probably, in time, Nassau.

Development of live stock exports from Western Canada to the United States is indicated by comparison of export trade for the first six months of 1916 and first six months of 1917. In the former period the total exports from Manitoba to the United States were: Cattle, 4,721; hogs, none. In the same period in 1917, the exports were: Cattle, 10,943; hogs, 1,288

CANADA AND SPAIN

Spain's Only Investment Here is in Aerial Cable Car at Niagara Falls

By CHEVALIER J. ENOCH THOMPSON.

Spain is neither a poor nor an unprogressive country. The Bank of Spain stands second in proportion of gold reserve to notes outstanding, having 1,810 millions of gold, 741 millions of silver against a circulation of 2,592 millions, or 98.41 reserve of specie; the Bank of England stands first though having only 1,341 millions gold (reduced to Spanish pesetas), against a circulation of 1,001 millions being 133.96 gold reserve. Spain has a population of 20 millions, ranking as seventh in the 22 nations of Europe.

Spanish investments outside of the Iberian Peninsula are almost entirely made in Spanish-speaking countries. Spanish capitalists own large sugar plantations in Cuba and have many millions invested in Mexico and South America.

The only instance of Spanish investment in Canada is the aerial cable car across the Whirlpool Rapids of Niagara. This system is the invention of an eminent Spanish engineer, Mr. Quevedo, who is also the inventor of an improved airship which has been adopted by the British government. This aerial tramway was built and is owned by Spanish capitalists. The terms imposed by the Niagara Park commissioners were not such as would encourage future investments from Spain in Ontario.

Canadian Capital in Spain.

Canadian capital to a much larger extent has been invested in Spain encouraged by the liberal and untrammelled conditions which Spanish authorities offer. The Barcelona Traction, Light & Power Company, Limited, a Canadian company, has invested over 90 million dollars.

Until 1910 Spanish emigrants did not come to Canada but attracted by the reports of high wages and promoted by transportation companies by 1914, 3,000 had arrived. Many have since returned or drifted to the States. There are probably 300 Spaniards in Ontario mostly employed in factories, mines and as cigar makers. They are good workers, industrious and sober.

The imports from Spain to Canada consist of raisins, grapes, almonds, onions and wines, and are about annually two million dollars. Formerly a large trade in oranges existed, but the competition of California and Florida has reduced it to small proportions. The export to Spain, mainly agricultural implements, was in 1912 $65,000, and has not been exceeded.

Absence of Direct Boats.

The absence of direct steamers between Canada and Spain has always been a serious obstacle to increasing the trade. A few months before the war two Spanish trade commissioners appointed by the government visited Canada and were so well impressed with the prospects of business, that they recommended the Spanish government to subsidize a direct line which would have gone into effect in the fall of 1914 but for the war.

Spanish imports are about 200 million dollars, exports about the same in normal times, of which about 35 million dollars worth are imported from the United Kingdom and about 70 millions shipped there.

Fruit and nuts are the largest item of exports, and fertilizers to the value of 3½ million dollars figure amongst the imports. 3¼ million acres are in vineyards producing 3 million tons of grapes, 3½ million acres in olives producing nearly 2 million tons, and 10 million acres in wheat produce 150 million bushels.

Manufacturers do not figure largely in Spanish exports but they are growing in importance. Barcelona, which with its suburbs is the largest city of Spain, is a combination of Liverpool and Manchester, being the largest maritime and most important manufacturing city of the country. Fabrics, automobiles, pianos and machinery are produced to a considerable extent for local consumption, protected by a high tariff. An important export business is carried on with South America in such articles as the residents of these republics and their children were accustomed to use when they lived in Spain.

Victoria, Capital of British Columbia, is an important shipbuilding centre.

PUBLICITY COMMISSIONER, VICTORIA, B.C.

It is probable that after the war, products of Spanish workshops and looms will be made in larger quantities and consequently cheaper, and attain such importance as to join in the race with other countries to replace goods of German origin. Abundance of cheap labor, shipping facilities and the development of water powers will aid this movement.

Anglo-Spanish Society Helps.

In one direction Spain will greatly benefit from the war. The thousands, nay millions of British, American, Canadian and South American people who were in the habit of visiting Germany will not during the present generation set foot in that country and will naturally turn to Spain. The few who visit Spain or have enjoyed the lovely winter climate of Malaga, Seville, Alicante, return every year. The rush of tourists will astonish the Spaniards and this traffic will be greatly promoted by the universal teaching of Spanish in place of German in British, Canadian and American schools. This agitation has assumed large proportions. In England the Anglo-Spanish Society has been established to promote and maintain friendly and sympathetic relations between the British Empire and Spanish-speaking nations; to stimulate the reciprocal study of language, endow professorships and scholarships in Spanish, etc. The officers of the society include the prime minister, Mr. Balfour, Lords Milner, Cecil, etc., the Spanish Ambassador in London and the British Ambassador in Madrid. In the United States every college or school of importance is teaching Spanish, and in one state 2,000 high schools adopted Spanish in place of German. In Canada the Board of Education of Toronto passed a unanimous resolution to teach Spanish. The minister of education and most of the university professors are in sympathy with this movement.

A Spanish club has been started in Toronto with 60 members to promote the study of Spanish language and literature and to foster commercial and social relations with Spanish-speaking countries. The consuls of Spanish countries resident in Toronto are heartily supporting the club.

CANADIAN PORTS FOR CANADIAN BUSINESS

Federal Government Should Equip Them for National Use—Progress of Eastern Ports

By R. E. ARMSTRONG.

A senator from an eastern constituency inquired last session whether it was the intention of the government "to take any action to prevent in future the bulk of the export of oceanic traffic being routed via American ports." There were some sympathetic speeches on the subject, but Hansard does not record that the inquiry was completely answered. This question of the utilization of Canadian ports in preference to ports on foreign soil is likely to be a burning one in maritime Canada when the war is over and trade has begun to settle into its accustomed grooves.

Before the war, there was a feeling in the maritime provinces that they were not as fully considered in the general scheme of Canadian affairs as they should be, and that there was an ignorance of maritime possibilities and conditions, and an indifference to their ambitions, on the part of the peoples of the rest of the Dominion.

The transportation companies in their advertising literature have in the past laid much heavier emphasis upon central and Western Canada than upon maritime Canada. The possession of the ports of St. John and Halifax has been found to be of incalculable value to the empire. In the early stages of the war, when the United States was not so favorably disposed to Britain and to Britain's cause as it is to-day, the Imperial authorities would have found themselves greatly handicapped if they had not had the open ports of St. John and Halifax to fall back upon when the cold weather had sealed the ports on the St. Lawrence. Many thousands of troops and many thousands of tons of war supplies were sent through these two ports that would have had to wait until spring had unsealed the St. Lawrence or would have had to be forwarded by a roundabout way through the port of Vancouver. This record of Imperial achievement, which cannot be minimized or denied, must forever stand as a powerful argument in favor of the open ports of the maritime provinces.

The people of the maritime provinces feel that they have every right to approach the federal government and ask them to equip their ports for national use and that they have every right to ask the Canadian shippers of grain and the Canadian exporters and importers of other commodities that they should route their shipments through Canadian ports and over Canadian railways. They feel, too, that they have just as strong a right to make this appeal to the exporters and importers of Great Britain and of the nations of Europe that are allied with her in the present struggle.

The maritime provinces have willingly contributed their share to the development of Western Canada, and they have willingly shared in the sacrifices that Canada has made to defend the honor of the empire and to uphold the principles for which it has been fighting, and they feel that they have won the right to share in the fruits of those sacrifices.

Aside from this view of the question is the larger one of the strengthening and upbuilding of the Dominion as an Imperial adjunct. Experience has shown the wisdom of Canada making herself as independent of her neighbors as her resources and position will permit. This is a national principle which all countries recognize and it carries with it no infringement of the rights and no aspersion of the peaceful intentions of our neighbors. To secure that national independence, Canadians must be brought to a realization of their responsibilities towards each other.

Canadian Ports for Business.

The St. John board of trade, following up its slogan of "Canadian Ports and Canadian Railways for Canadian Business," has been continually pressing the claims and advantages of the open ports of the maritime provinces upon the public of Great Britain and Canada. The demand has been made by this board that action should be taken to secure to a fuller extent the carrying of commerce designed for Great Britain and her allies through the ports of Canada.

In a resolution adopted by the St. John board quite recently, it was resolved that "the council urges upon the government of Canada, in co-operation with the home government, the importance of further hastening the development of the open ports of the maritime provinces, so as to care for this commerce in summer and winter, and it also calls upon Canadian shippers to route their shipments wherever possible through Canadian ports, thus assuring them necessary sea protection, and at the same time strengthening and upbuilding Canadian ports and railways, toward the development of which vast sums of the public moneys of Canada have already been expended."

Exports and Imports.

In this connection it may be of interest to note the progress that the port of St. John has made in the matter of exports and imports during the past six years.

Year.	Exports.	Imports.
1912	$ 21,895,963	$ 8,590,197
1913	25,594,721	9,873,026
1914	21,359,760	9,433,220
1915	43,872,932	9,112,916
1916	120,042,590	11,165,463
1917	190,586,561	15,500,659

This rapid development which places St. John as second in the export ports of Canada, may be largely traced to the fact that it has the advantage of having the shortest rail haul to and from the west of any other all-the-year-round port in eastern Canada.

Halifax has likewise made progress as a port during the past six years, the blue books showing its exports and imports to have been as follows:—

Year.	Exports.	Imports.
1912	$15,857,184	$11,996,093
1913	15,173,250	12,404,055
1914	19,157,170	12,139,606
1915	17,247,719	10,712,585
1916	26,843,487	9,873,309
1917	34,175,832	14,062,009

The above port results have been reached with only a small portion of each port developed. When the full development of which these ports are capable has been attained, their possibilities will be very great.

In addition to the winter port of St. John, which has accomplished so much during the short period that it has been used as such, New Brunswick possesses two splendid open

ports at St. Croix and Letang on the Bay of Fundy. These national harbors are capable of rapid equipment should the traffic at St. John ever get beyond the capabilities of that port. "Canadian Ports and Canadian Railways for Canadian Business" would be just as good a slogan for Canada as a whole as for the maritime provinces.

DEVELOPMENT OF WESTERN CANADA

Importance of Immigration Policy in Relation to Agriculture

BY JAMES CARRUTHERS.

The most vital problem facing Canada to-day, outside of winning the war, is the question of immigration A country that in fifteen years can increase its grain production from 43 million bushels in 1900 to 745 million bushels in 1915 proves conclusively that agriculture is its basic industry, and, in my opinion, everything possible should be done to foster and encourage immigration into our western lands.

It is difficult to say to what extent emigration will be permitted from European countries. Some writers claim the immigration tide may turn from the west to the east. The United States commissioner of agriculture, Frederick C. Howe, seems to be of this opinion, and believes there will be a large exodus from the United States to European countries after peace is declared, provided ocean accommodation can be secured, or unless some drastic legislation is made by the government to prevent same.

Must Attract Settlers.

If European countries are going to compete with America for agricultural settlers, then it is apparent Canada should do everything possible to attract settlers to the fertile lands in our North-west, and, if necessary, offer special inducements.

Canada is an agricultural country, and what we need most of all is people to settle our lands in the North-west. Unless we can get these settlers it is going to mean rather serious problems for Canada for the next ten years to come.

Weakness of System.

Three weak points in our immigration system are:—

(1) The lack of any efficient system of selecting suitable immigrants. (2) The lack of controlling and assisting newcomers to our country. (3) Our lamentably unscientific system of agricultural settlement.

Now is the time when we should set to work on a comprehensive plan to remedy these weaknesses, which in the past have been productive of waste in what would otherwise have been effective man-power.

How shall we get our immigration? It has been suggested that large numbers of British soldiers will come to Canada after the war, and it is thought that many good men of other nations will be glad to leave war-ridden Europe and make a home in this country. All this is problematical, however, for we do not know to what extent any of these countries will discourage emigration.

This much, however, is plain. Our immigration plans must be so fashioned as to attract the largest possible number of available men of the agricultural classes. It must also provide opportunities for the attraction, instruction and assistance of such men as wish to take up agriculture.

In regard to settlement, our present system of laying out farms on the checkerboard plan is a grave handicap. It emphasizes to the utmost possible degree the isolation of the individual units

Must be Attractive.

Life on the new lands must be made socially attractive, and the only way to do that is to group the settlers into communities. We need a complete reorganization of our methods of survey. The checkerboard plan must give way to the community plan of individual holdings, and the sooner we set about making the change the better. Mr. A. C. Flumerfelt, K.C., of British Columbia, who has devoted much thought to this problem, has put forth an admirable scheme along these lines. He not only advocates a system of self-contained communities as against the present policy of isolated farms. but also a plan of co-operation in the purchase and use of the most approved agricultural machinery, and a plan for expert assistance in dealing with agricultural problems and financing the new settlers.

Among the good points of our present system which should be developed are the government experimental farms, which have done splendid work, and the "Farmers' Special" trains, taking experts all over the country to give lectures and demonstrations in good farming. This latter is most important, for good farming means larger returns for the money expended. The average yield in Western Canada could be doubled by intensive farming.

Value of Crops.

In 1917, we had a crop of nearly 250,000,000 bushels of wheat of superlative quality, which practically all grades No. 1 or No. 2 Northern. It is a conservative estimate to say that the total yield of grain in the three provinces last year means a return of $750,000,000. If we were to add to it the total value of the returns of all other kinds of farm produce, not only in the west, but in all Canada, I think we should be staggered by the revelation of the importance of farming in the economy of this country.

Now, here is the point I want to make. Our neighbors to the south produce a grain crop of around 5,000,000,000 bushels; that is to say, about one billion bushels of wheat, three billion bushels of corn, and the balance made up of other grains.

We can produce as large a crop of grain as the United States. We have the land. What we want is the people. We have only 22,000,000 acres of land under cultivation in the prairie provinces out of over 250,000,000 acres of fertile land available for agricultural purposes. Think of the opportunities this means for the production of wealth and the building up of a great nation!

Finest Wheat in World.

There is another thing. Our wheat is the finest in the world. It weighs 62 to 63 pounds to the bushel, of a quality that cannot be produced elsewhere. This war has done wonders in spreading a knowledge of the value of our wheat lands and the superiority of our product. We have been exporting wheat to countries that never had it before. Italy, for instance, which formerly bought none of our wheat, has purchased an enormous quantity. I myself shipped to Italy on behalf of the government about 12,000,000 bushels. That is big advertising for Canadian wheat.

In our territory, extending from the Atlantic to the Pacific, we have natural resources of every conceivable kind Also, we have a climate which cannot be excelled in any part of the world. I believe that at the close of the present century we shall have a population as large as that of the mother country. But it all depends upon how we meet the vital problem of immigration, and upon whether we realize as we should that the basis of all prosperity is what comes out of the soil.

A chart of the food waste problem has been compiled by Mr. Lucius P. Brown, director of the bureau of food and drugs, department of health, New York City. This chart follows food from the farm to the kitchen and tabulates eight great causes of waste. They are: No terminal markets; duplication of marketing facilities; expensive cartage; high retail delivery costs; unnecessary credits; extravagance in service and display; failure to buy home-packed goods of equal quality; and failure of retailer to use proper merchandizing methods.

The Canadian minister of railways last year granted the sum of $25,000,000 as a fund provision for the purchase of locomotives and rolling sock for the government-owned railways and freight cars to supply the shortage on other railroads. In all, 6,000 freight cars are being purchased, 4,000 from the Canadian Car and Foundry Company, 1,000 from the Eastern Car Company, and 1,000 from the National Steel Car Company. They are all to be delivered between October 1st, 1917, and February 1st, 1918. Only 4,000 of the cars are required for the government-owned railways, therefore the balance will be distributed among other railroads, most of which will go to the Canadian Northern and Grand Trunk railways.

General View of Granville Island during Process of Reclamation Forty-two acres now available for Industrial Sites.

Choice Industrial Sites in the Heart of

VANCOUVER

BRITISH COLUMBIA, CANADA

Granville Island is located only nine blocks from the retail business district of Vancouver.

The industrial sites are served with dockage for deep sea vessels and the island is provided with railway trackage, electric light and power, water and gas supply and sewerage.

Excellent industrial sites are available at extremely low rates. The island was reclaimed for the fostering of industries and is under the control of a Government Board.

Vancouver offers manufacturers vast supplies of raw materials, a home market which imports goods to the value of many millions yearly and opens up direct connection for trade with the Orient.

Water transportation available the year round.

A number of industries are now operating on the island and eastern firms are securing locations and preparing for local and trans-pacific business.

Learn just what opportunities are made possible for the manufacturer or handling of your goods or allied lines.

You can have, free, an accurate, unbiased and confidential report on the situation, from your particular point of view, by stating your needs.

THREE PERIODS OF RAILWAY DEVELOPMENT

Pioneer, Construction and "Digestion" Eras—Case for Railway Rates Increase

BY J. L. PAYNE.

Canada might be said to have definitely entered upon a third phase of railway development. The first began in 1836 and ended in 1880. That was the pioneer stage, and resulted in the building of 7,194 miles of line, all of which were located east of Lake Superior. The second phase began with the construction of the Canadian Pacific, and terminated with the the completion of the Grand Trunk Pacific in 1913. During those thirty-two years, which might be classified as the expansion period, there was an addition of 22,110 miles to the available railway mileage. Since 1913 there have been added 8,130 miles of line, bringing the total in 1916 up to 37,434; but that addition merely represented the bringing into operation of mileage which had been in process of construction for a number of years. Not a single new railway undertaking has been given effect since 1912.

The commencement of the second phase saw the first mile of track laid down in the great prairie provinces, and it is significant that at the present time 17,488 miles, out of a total of 37,434 in the Dominion, are in operation west of the Ontario boundary. That was what the period of expansion brought about. It meant the opening up for settlement and commerce, of those vast fertile areas lying north of the forty-ninth parallel and west of the Great Lakes, which have already become such an important part of the Dominion and which will inevitably rise in peace. Those were pregnant years, 1880-1913, for Canada.

Period of Digestion.

The third phase, which is now assuming positive form, might be defined as the period of digestion. During the thirty years which witnessed the relatively rapid development of the western provinces there was in constant evidence a spirit of abounding optimism. Not a croaker arose to tell us we were building railways in advance of our national needs; on the contrary, there was a universal conviction that we were rather lagging in the creation of transportation facilities. Activity in construction was applauded us the means by which we should take full possession of our magnificent heritage. The nation speeded up as the years rolled by. We need not smudge the retrospect with reproaches. It was well. We have the railways; but we also have an inconvenient attack of dyspepsia. During this current third phase we shall find room for first-class sagacity in restoring ourselves to the eupeptic condition which characterized our splendid efforts at nation building during the eventful years which immediately followed the completion of the Canadian Pacific.

It may help us to a clearer understanding of what we have done in railway building if we set before our eyes a few comparisons. When the first phase had ended in 1880, the total capitalization outstanding was $270,617,493. When the second phase had run its course the aggregate had risen to $1,531,830,692. It stood at $1,893,877,819 last year, and when the account has been brought down to date it will probably be found that we have reached the $2,000,000,000 mark. When the Canadian Pacific was begun, the freight traffic of the country was slightly under 10,000,000 tons. Last year it amounted to 109,659,088 tons. During the same period the number of passengers carried rose from 6,462,948 to 49,027,671. Even more striking was the advance of gross earnings from $23,561,447 in 1880 to $263,527,157 in 1916.

Earnings Per Mile.

In one way and another it has become fashionable to measure railway progress by gross earnings, and, as far as it goes, that is both a satisfactory and comprehensive test. It strikes the eye with compelling force. But the analyst prefers the more enlightening figures which relate to earnings per mile of line, and when resort is had to that standard of measurement a somewhat different result is revealed. For example, in the pivotal year 1880 the per mile average was $3,275. When the Canadian Pacific had been completed in 1886, despite a gain of $10,000,000 in gross, the average per mile had fallen to $2,831. Mileage had moved upward more rapidly than had earnings. Precisely the same thing has happened during recent years. While gross earnings have increased by nearly $100,000,000 since 1910, the average per mile of line has actually fallen from $7,034 to $6,943. This was due to the fact that during that period nearly 10,000 miles of new line had been brought into operation. Quite obviously, new mileage cannot be expected to produce the volume of traffic which attaches to established mileage.

The war has both helped and hurt our Canadian railways. A perceptible decline in traffic had begun several months before the tocsin sounded, and in the following year nothing but rigid retrenchment saved a perilous situation. If there was heroism on the battlefield during the first twelve months of fighting in Europe there was also courage displayed by the men who had charge of our wide-flung transportation interests at home. They deserve infinite credit for avoiding conditions which might have approached disaster. When the movement of a great volume of war supplies began there was a swift return to swelling earnings, and 1916 showed a gain of $64,000,000 over 1915. For 1917 the weekly return of earnings by the larger railways point conclusively to a new high level. The official figures for all lines will not be available until well along in the new year; but it may be assumed with safety that they will add materially to the total for gross and the average per mile.

Pre-War Rates.

While there has been a painful advance in the all-round cost of living, as the result of acute war conditions, the railways have not had any share in the uplift of prices. They have had to pay a great deal more for both supplies and labor; but they have been held firmly to pre-war rates. The selling price of transportation by rail has been stationary, while the selling price of transportation by water has gone up to undreamt-of figures. This is the illuminating lesson of control. The producers of food, for example, unchecked by any authorized and law-fortified tribunal, have run riot. Just why we have permitted ourselves to get into such a needlessly hurtful situation cannot be regarded as a tribute to either our perspicacity or sanity. If the alleged law of supply and demand is both automatic and inexorable, it ought to be as available to the producer of transportation as to the producer of wheat.

It is somewhat of a triumph that, in face of decidedly adverse conditions, our Canadian railways have been able to maintain net earnings. They have, indeed, slightly increased them. Perhaps no finer proof of administrative skill could be given. The means by which they have done this are in part negative and in part positive. That is to say, they have skillfully cut down all unproductive train mileage on one hand, and on the other they have increased both the carload and the trainload. These things represent, perhaps, the very finest tests of sound management. The average carload in 1907 was 15.37 tons; in 1916 it had been brought up to 20.91. The average trainload in 1917 was 260 tons; in 1916 it was 411. It is along these lines that the shrewdest executive heads of big railways across the border are directing their most determined efforts as the only means of offsetting the rising cost of operation. We are doing just as well, all things considered, on this side of the line.

Principle of State Control.

The third phase of railway development in Canada will be marked by a long and significant stride in the direction of extending the principle of state control. With the taking over of the Canadian Northern and the National Transcontinental, government for the first time comes into possession of a system extending from the Atlantic to the Pacific. This vital change, it will be conceded, was the result of purely financial circumstances rather than the deliberate assertion of a policy. Coincident with this movement has sprung up a demand in some quarters for the general nationalization of railways, and it is noteworthy that a somewhat similar agitation appears to be gathering headway in the United States. These things may be alluded to as facts coming properly within the scope of a brief resume of the railway situation; but it would be obviously improper on my part to venture either a word of comment or a syllable of speculation as to what may be the outcome.

These are times of radical and sudden changes. The world is in a state of flux. With a pronounced disposition on the part of communities and nations to right many things that are found to be wrong, it should not be surprising if departures are made swiftly which would have taken generations to develop under normal conditions. Whatever may take place, it may be taken for granted that our railway facilities are capable of meeting the needs of both a larger

population and a larger commerce. That is something which ought to inspire confidence in the future; for adequate transportation lies at the foundation of national growth. We may face the momentous new year without misgivings on that score.

UNITED STATES FACTORIES FOR CANADA

Many More Will Probably Come After the War—Our Location is Favorable

By F. M. SCLANDERS, F.R.G.S.

Here, at the southern extremity of Canada, our long peninsular protrudes wedgelike into the United States. On all sides, save the north, we are embraced by American territory. On our west, we have Michigan; on our south, Ohio; and, on our east, Pennsylvania and New York. Our geographical location probably accounts for the ignorance of many of our own people elsewhere as to what is happening here, at these border cities of Ford, Walkerville, Windsor, Sandwich and Ojibway. We are deemed to be somewhat beyond the beaten track of things. This is apparently accepted as a handicap to any material development. Consequently, it seems instinctively reasonable to classify us along with those points which remain the same yesterday, to-day and forever.

However, a little thought may convince that instead of a serious handicap, our location is really an exceedingly valuable advantage. Obviously, the further south we are, the closer are we to many of the most important industrial centres of a great country of over one hundred million people of extraordinary national genius and amazing enterprise. For, it is to the United States that we must look for our industrial expansion; and, we are not looking in vain. Within the past three months, eight manufacturing concerns have concluded negotiations to establish here; several of them are here already.

"Made In Canada."

The Americans know us better than do our own people. This is indicated by the fact that our development of recent years will compare most favorably with that of the most progressive points in the Dominion.

The existence of the war does not appear to dampen the ambition of the American manufacturer for a Canadian branch. In many instances, it would seem to be the reverse. These far-sighted people to our south know that war cannot last indefinitely. They are confident that matters will take an emphatic turn for the better after the active advent of a large United States army at the front. They are looking well ahead; and one thing they certainly do recognize is, that after the war, that little trinity of simply words, "Made in Canada," is destined to prove the most potent selling slogan that ever paved the path to great commercial possibilities. The American knows that these little words are no longer a mere designation of origin. He realizes that they have now acquired a world-significance deeper and more potent than centuries of conscientious commerce ever could have induced; and that behind them stand the magnificent record and the supreme sacrifice of this young country in the cause of world freedom.

Canadian Branch Factories.

The astute American wants to come to Canada. At the same time, he does not wish to go too far from his United States headquarters. Our location suits him admirably. We are only one hour-and-fifty minutes train journey from Toledo, four hours-and-five minutes from Grand Rapids, four hours-and-forty-five minutes from Cleveland, seven hours-and-fifty-three minutes from Chicago, etc., etc. Therefore, with one set of highly paid executive brains, the American can also operate a Canadian branch factory here, where we are surrounded on all sides save the north, by American territory. Hence the outstanding value, and not the detriment, of our location.

However, the essential object of this article is to point to the most definite movement of American industries toward Canada. Even in passing on the trains through Michigan, Wisconsin and other neighboring States, it would almost seem that, at every point, industrial development stretched out like the fingers of a hand in the direction of our great country.

Everywhere I go among American manufacturers, there is the same keen, intelligent, well-informed interest in Canada and her industrial possibilities and purchasing potentialities. When I say "well informed," I speak mildly. The general knowledge of Canada possessed by the greater proportion of the high officials of large United States concerns whom I have interviewed, would do great credit to the average individual whose ancestors for several generations back, sleep in Canadian soil.

Despite the war, American industries will continue to flow into this country most encouragingly,—but, after the war, we shall experience an invasion of them. This is my whole message; my whole point.

In 1915, Canada's total imports amounted to $629,444,794. Of these, about 75 per cent. emanated from the United States Yet, on account of our tariff, most of the goods thus represented could have been more economically and more profitably manufactured in the Dominion.

I am not afraid to predict that a year or so after the war, a material proportion of the sum of our present annual imports will be added to the value of our industrial production. This desirable change will result largely from the American industrial invasion of Canada.

ONTARIO'S NICKEL RESOURCES

Metal Found in Commercial Quantities in Four Localities in Province—Value of Nickel Steel

By THOS. W. GIBSON.

The most distinctive metal produced in Ontario is nickel. There are other sources of nickel in America, Australasia and Europe, but none of the deposits are worked on so large a scale or form the basis of an industry at all comparable to that of Sudbury. The story of the discovery of nickel in this province is not devoid of romantic interest, and is related in the report of the Royal Ontario Nickel Commission, published in 1917, together with a great body of information on all other aspects of the nickel question, which for so many years occupied the public mind. The building of the Canadian Pacific Railway along the north shore of Lake Huron in 1883, laid bare a deposit of chalcopyrite, or copper ore, the exact spot being what is now known as the Murray mine. Other bodies of a similar kind were found, and mining of the ore began. On sending it to the smelters for treatment, the ore was found to be refractory, and investigation proved that the difficulties were due to the presence of nickel.

It was then realized that what had been discovered in Northern Ontario was nickel ore rather than copper ore; or, more correctly, for both metals are contained in commercial proportions, nickel-copper ore. Long before this, nickel had been detected by Alexander Murray at the Wallace mine (1848), and also on Michipicoten Island, but in very small quantities. Murray, who was the able assistant of Sir William Logan, the provincial geologist, following up a hint given him by Surveyor A. P. Salter, visited a locality about 30 miles north of Lake Huron, where Salter's compass had been greatly affected by magnetic attraction, attributed by him to iron ore in the surrounding rock. Murray found the compass variations to be due to "an immense mass of magnetic trap," specimens of which he carried away with him for analysis—by his co-worker, Sterry Hunt, afterwards one of the foremost of American chemists. The latter found these specimens to contain minute grains of magnetic iron ore, also titaniferous iron ore, iron pyrites and a small quantity of nickel and copper.

In Government Blue Books.

Salter, Murray and Hunt made their reports to the government, as was their duty, and the government in due course put them in print. All this in the year 1856; and for 30 years these precious hints lay in the government blue books unnoted and unacted on. But in 1886, the Creighton mine was discovered, which the Nickel Commission states is the "greatest nickel mine in the world," and also "one of the greatest metalliferous mines of any kind," and, on consulting Surveyor Salter's notes, it was found that Murray's "immense mass of magnetic trap," and the Creighton mine, were one and the same. The shaft of this mine is now hoisting 5,000 tons of ore per day.

CANADIAN PACIFIC RAILWAY'S FINANCIAL STRENGTH

Company Has Rendered Great Assistance to the Imperial Authorities

An important arrangement was made, early last year, by the Imperial government with the Canadian Pacific Railway for the establishment of dollar credits in New York. It was proposed to issue nearly $200,000,000 new bonds in New York to replace sterling bonds of the Canadian Pacific Railway mobilized by the British authorities. The issue was about to be made when the United States entered the war, and postponed the transaction indefinitely, as credits were established for Great Britain out of Liberty Loan funds and in other ways.

SENATOR THE HON. F. L. BEIQUE,
Director of the Canadian Pacific Railway.

While the transaction was postponed, all the necessary preliminaries were completed, so that it can be carried out without delay at any time in the future. A bill authorizing the Canadian Pacific Railway to issue new bonds in order to replace sterling bonds taken over by the Imperial government became law last summer. Sir Thomas White then stated that it was not the intention at present to make such an issue, but the Canadian Pacific Railway had been asked by the Imperial government to secure the necessary legislation in order to be prepared for the contingency, should it arise. The Canadian Pacific Railway, explained Sir Thomas, if action was taken under the legislation, would be simply doing it to facilitate Imperial financing in the United States.

Later in the year, the Canadian Pacific Railway Company advanced $10,000,000 to the Imperial Munitions Board, which facilitated the financing of further business under its control in Canada.

Some months previously the company issued and loaned to the British treasury $40,000,000 of the company's 4 per cent. debenture stock for a period of five years. This stock was used as collateral for British government loans in New York.

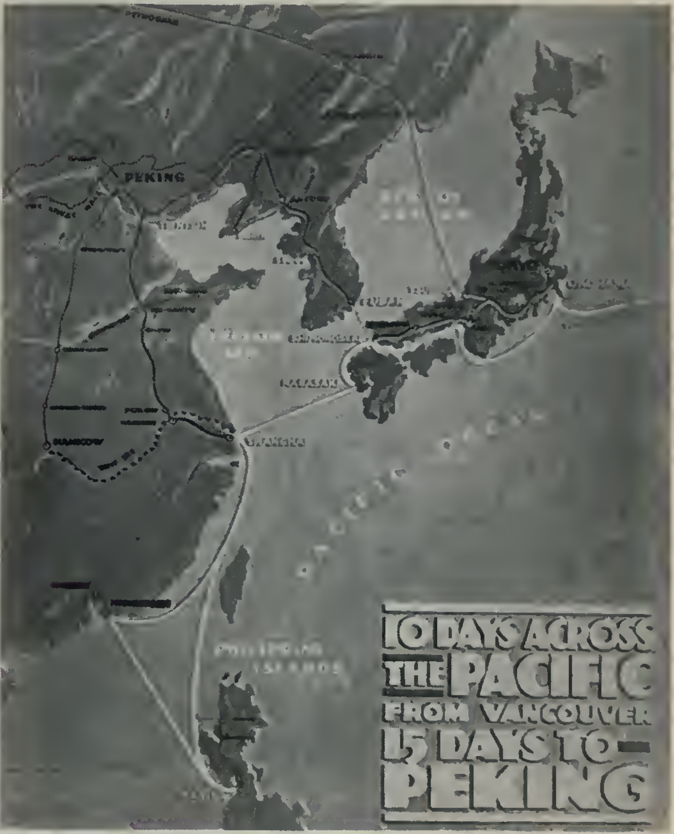
The total amount loaned, either in cash or securities, by the Canadian Pacific Railway to the Imperial and Canadian governments, to further the war, is now $80,000,000.

The Canadian Pacific Railway has also subscribed heavily to the Canadian war loans. Its subscription to the Victory Loan in November last was $10,000,000, the largest single subscription recorded.

The French-Canadians have always taken a close personal interest in the fortunes of what they call for short "Le Pacifique," just as the English have abbreviated the Canadian Pacific Railway into the more familiar C. P. R. It is, therefore, only right that they should be represented on the board of directors, and no more fitting representative of the race could be found than Senator, the Hon. Frederic Ligori Béique, whose career has been one of such distinction in so many paths of life. Lawyer, business man and philanthropist, interested in many charities, his days have been, and continue to be, full of useful labors in the upbuilding of his native country and in promoting the welfare of her people. His is one of those versatile natures, which, paradoxical as the expression may appear, is only at rest when in the midst of labor.

F. L. Béique, the son of Louis Béique, was born in St. Mathias, Rouville County, Quebec, on May 20th, 1845. Acquiring his education at the College de Ste. Marie de Monnoir, he chose law for his profession, and later on became an LL.D. of Laval University. He was called to the Bar in 1868, and made a King's Counsellor for the Province of Quebec in 1885, and for the Dominion of Canada in 1889. Accurate knowledge, sound judgment and clear speaking made him one of the leading lawyers of his period. His brothers in the legal profession have recognized this. From 1891 to 1893 he was Batonnier of the Bar in the district of Montreal.

Senator Béique has been engaged as counsel in many celebrated cases. He repeatedly pleaded before the Privy Council in England; he was a member of the Royal Commission in the famous Whelan case of 1890; as counsel for the late Hon. H. Mercier and his colleagues who were accused in connection with the Baie des Chaleurs Railway by the Lieutenant-Governor of Quebec, in 1891, he won a wide reputation; in 1896 and 1897 he was counsel for the Dominion before the Behring Sea Claims Commission. For years he has worked in partnership with Sir Louis Jetté, and he still energetically pursues his legal practice.



The new overland route from Yokohama to Peking and the "Empress" steamers of the Canadian Pacific Ocean Services, have now brought the capital city of China within 15 days' journey of Vancouver. Through tickets are now issued from Yokohama for this journey over the Railways of Japan, Korea and China.

Coincident with the opening of the newly found nickel deposits of Sudbury was the discovery of nickel steel. In 1889, James Riley, of Glasgow, established the fact that a small proportion of nickel greatly increased the strength of steel. Up to this time, nickel had played a very minor part among the metals, but Riley's discovery lifted it to a place of much importance, and quickly led to an increased demand which the Sudbury deposits were in a position to supply, and which greatly hastened their development. A special application of nickel steel was in the manufacture of armour plates for battleships. The United States government of the day was quick to realize the importance of nickel steel armour plates, and its large requirements put the industry at Sudbury on its feet. Undoubtedly, however, the future of nickel steel is an industrial one.

After the present devastating war is ended, the work of reconstruction will begin, and in this it is certain nickel steel will play a worthy and important part. For large bridges, locomotive and automobile parts, marine shafts and boiler tubing for everything, in short, where steel is required to be both strong and light, nickel would seem to be almost indispensable. Other uses there are for nickel, such as in electroplating, in cupro-nickel, nickel silver, coinage, etc., but these, while not unimportant, do not now, and are not in the future, likely to require much metal, compared with nickel steel. Even the war, while diverting nickel as well as almost everything else for the time being to purposes of destruction, is making the industrial world more familiar with the advantages of nickel steel, and will probably conduce to a greater demand than ever before.

Alloyed with Steel.

There are several other metals which, when alloyed with steel, exercise a beneficial effect comparable to that of nickel; among them, tungsten, manganese, vanadium, chromium, molybdenum. But the supply of most, if not all of these is scanty and precarious. The difficulty of obtaining sufficient quantities of manganese since the war broke out, is well known, and the scarcity of tungsten has led to molybdenum being used in its place. But most deposits of molybdenite, the principal ore of this metal, are pocketty, and of comparatively small extent. It would seem that nature was in a niggard mood when she provided these beneficiators of steel.

This scarcity is not so marked in the case of nickel, which indeed occurs abundantly—more abundantly than copper—as a constituent of the solid crust of the earth, but only here and there is it sufficiently concentrated to furnish workable deposits. In one or two localities, for instance, in the island of Cuba, nickel occurs on a really important scale, but in such a form—namely, accompanied by chromium in an earthy iron ore of low metallic contents, as to make its commercial extraction or utilization somewhat difficult. It is less easy to make a product of uniform composition from a natural alloy of this kind than from the necessary materials in separate form, since in the latter case the proper proportions are more readily obtained and controlled. But so far the largest and best deposits from which nickel as such can be extracted are those of the Sudbury district of Ontario. Here large masses of pyrrhotite mixed with chalcopyrite are found, containing on an average about 3 per cent. of nickel and 1.5 per cent. of copper.

In Four Localities.

From four separate and distinct localities in Ontario nickel in commercial quantities has been obtained. The earliest of these was Silver Islet, a tiny speck off the north shore of Lake Superior. The chief metal of this mine was silver, but with it were associated also nickel and cobalt. In 1874—43 years ago—a shipment of nickel and cobalt in the form of speiss, mattes and oxide, was made to Schneeburg, in Saxony, for which, reckoning also the silver which was left in these materials, some $30,000 was obtained. It must be remembered that at that time nickel was worth about $3 and cobalt about $4 a pound.

The second area was that of Sudbury, now by far the most important source of production in the world. The third nickel-bearing locality was Cobalt, so-called from the metal of that name, whose rose-pink arsenate colored the rocks alongside the Timiskaming and Northern Ontario Railway Company's right-of-way near Lake Timiskaming, and attracted the attention of the woodrangers and workmen when the railway was being built in 1903. The assemblage of minerals at Cobalt was almost precisely the same as at Silver Islet—silver, cobalt, nickel and arsenic. The nickel contents in both cases were small, yet from the Cobalt silver ores have been taken nickel amounting to about 4,000 tons in all, and from these ores was made the first metallic nickel refined in Ontario.

In the township of Dundonald about 130 miles northeast of Sudbury, the fourth nickel deposit was discovered. A prospector, named Alexander Kelso, who read the government reports, noted that the surveyor in laying out the township of Dundonald had observed a strong local deflection of the needle, and being a man of intelligence, examined the spot and found the disturbance due to a body of pyrrhotite carrying nickel and copper. This, it will be observed, was the Creighton mine case over again, except that the information contained in the government blue books was made use of. This mine is called the Alexo, and it has for several years yielded 10,000 or 12,000 tons of ore averaging over 4 per cent. of nickel and about 1 per cent. of copper.

Two Distinct Types.

These four nickel areas are of two distinct types: Silver Islet and Cobalt being alike in their mineral constituents, while the Sudbury and Alexo deposits closely resemble each other. In the first two the ore is essentially one of silver, accompanied by the arsenides of nickel and cobalt. In the second, the chief component is pyrrhotite with which are associated nickel and copper sulphides. But Sudbury far surpasses the other three in size and importance.

Two operating companies work the mines of Sudbury—the Canadian Copper Company and the Mond Nickel Company, the former an American, and the latter an English concern. The seat of the former is Copper Cliffe, and of the latter Coniston. The copper company treats about 1,300,000 tons of ore yearly and the Mond company over 300,000 tons. Both are excellent samples of the modern, large-scale mining company, whose works and equipment are of the most approved type.

The process of treating the ore is interesting. After being raised from the mine and washed, it is roasted in huge heaps in the open air to drive off the sulphur, which, according to the Nickel Commission, escapes from the heaps, and also from the smelter and refinery stacks, in quantities equivalent to one million tons of sulphuric acid per annum. The roasted ore is smelted in an ordinary blast-furnace to a low grade matte, and the latter is then blown to a Bessemer matte, containing about 80 per cent. of nickel plus copper. This matte is exported to New Jersey and Wales for the final separation of the metals. The International Nickel Company, with which the Canadian Copper Company is associated, is erecting a large refinery at Port Colborne, Ontario, which it is expected will shortly go into operation, with a capacity of 7,500 tons of refined nickel per annum. The Mond Company's refining is all done at Clydach in Wales, where metallic nickel and sulphate of copper are made. A third company, the British-America Nickel Corporation, is opening a large deposit of ore at the Murray mine, and will build a smelter and refinery there also. This company has the financial backing of the British government. The output of the Sudbury mines for 1917 was about the same as for 1916, or, say, 41,500 tons of nickel and 21,250 tons of copper, the value of which, in the matte form, was about $30,050,000. Both metals, owing to war demands, are higher in price than for years.

Other Countries' Deposits.

The other main source of the world's supply of nickel is the island of New Caledonia, some three days' voyage by steamer from Sydney, Australia. The New Caledonia ores are of an entirely different character from those of Sudbury, being for the most part of an earthy, lateritic nature. They carry a higher percentage of nickel, but no copper. No refining is done on the island, the ores being exported as such, or as matte, principally to Britain and France, but also to a smaller extent to the United States, for refinement. These deposits for a long time dominated the nickel market, but their output now is less than one-third that of the Sudbury mines. For instance, during the five years, 1911-1915, New Caledonia turned out 39,607 tons of nickel, while Ontario produced 121,106 tons. Since 1915, the production of New Caledonia has not increased, while that of Ontario has gone up more than 20 per cent.

Norway also has nickel-copper deposits of the Sudbury type, but the ores are poorer both in nickel and copper. The war demand has brought about an increase in the Norwegian production which, however, is less than 1,000 tons per annum. Most of it has found its way to Germany, but of late this export trade has been much curtailed

GAS LIGHT POWER

Winnipeg Electric Railway Co.

ELECTRIC RAILWAY CHAMBERS
WINNIPEG, - - MAN.

HOMESTEADS IN THE BANNER HOME PROVINCE OF ONTARIO

20,000,000 acres of the Finest Agricultural Land in Canada
waiting for you in the Northern part of Ontario

THINK OF IT! Homesteads available at 50 cents per acre, close to railroads, close to markets, close to civilization and attending advantages.

Land of opportunity. You can make yourself a home within a short day's journey of Toronto.

Land lies in one of the best belts of Canada, along the TEMISKAMING & NORTHERN ONTARIO RAILWAY, which has connections with the G.T.R., C.P.R., C.N.R. and C.G. Railways, thus bringing the Settlers within easy reach of the profitable markets of the Continent and Europe.

Prosperous towns, growing into cities; in this way local markets available to the settler for buying and selling.

You may have a happy home and a fertile farm at 50 cents per acre in your own home Province of Ontario. Why, then, go far afield for these ideal conditions? Exhibits of the products and of the possibilities of production of New Ontario's land have been shown at Canada's National and other Expositions, so that it is now known as Canada's land of production.

Not only land of agriculture, but embraces large and rich mineral belts, from which, annually, millions of dollars of gold and silver are mined.

Learn more of This Land of Plenty by sending for free Booklets to Geo. W. Lee, Commissioner and General Agent, North Bay, Ont.

NATIONAL OBLIGATIONS AND TRADE

Analysis of Conditions and Outlook for Post-bellum Business

By R. J. YOUNGE.

The business men of Canada, in conjunction with the Dominion government, must carry the responsibility of preparing now for the trade conditions which will follow the war. The majority of our leading business men are not in the trenches. Their presence and assistance have been necessary at home, and they have given in most cases unstintedly of their time, their effort and their money in the production of munitions, the maintaining of a score of patriotic funds, the flotation of national loans and many other meritorious projects for the winning of the war. But what have they done to get ready for the conditions which must inevitably follow the coming of peace? In every other belligerent country a great deal of time and thought have been given to these problems.

Let me ask three important questions: First of all, in connection with the changes that must come when our munitions orders are finished. We have to-day in Canada one thousand factories making shells and various kinds of requirements for the war. Employed in those factories there are half a million workmen. What is going to happen to these factories when these munitions orders are cut off, as they will be some day—soon, we hope—perhaps overnight?

The second question is, how are we going to take care of our returned soldiers? We will have, perhaps, three or four hundred thousand soldiers coming back from the front, and all the manhood there is in us tells us that our first duty as Canadians is to see that employment is offered to these men. If we do not plan to-day, if we allow these intervening months to pass, while they are carrying the burden in the trenches, without preparing and organizing to insure them, not only a welcome when they come back, but a good job which will bring them proper remuneration, we shall have failed to do our duty.

National Obligations After War.

But, even supposing that we have orders to fill these factories, even supposing that we have plenty of work for all our soldiers who will come home, then let me ask, how are we, as a nation, going to meet our national obligations after the war, unless we build up a balance of trade by greater production and wider markets? We do not realize what our national debt is going to be when the war is over. The 7,500,000 of people in Canada can avoid staggering under that debt, only if, as a nation, we are able to sell more than we buy; that is the only solution for meeting our national obligations.

This view may appear more or less pessimistic, but when we think seriously of these problems which are confronting us, we must face hard facts. There is another side, however, to this picture. If these conditions which we must face as business men, do appear to be almost insurmountable, there is a brighter side in the magnificent prospect which we have to establish ourselves as a greater factor in the world's markets than we have been in the past. Speaking with a few hundred manufacturers as I have in the last two years, I have been told by many that we cannot compete with the world, that our export experience, before the war, has taught us that money can be lost in export trade as well as made, and that when compared with the much lower priced labor in Great Britain and much more highly specialized industries in the United States, Canada is operating under enormous disadvantages. The president of the National Association of Manufacturers of the United States, speaking more than a year ago, said that in the enormous changes that were taking place in the world's trade, the manufacturer in the United States would reap his full harvest from those changes only if he learned now to understand that "old things have passed away and all things have become new." If that is true for the highly specialized and highly capitalized manufacturer of the United States, then it is even more true for the small and sometimes struggling manufacturer in the Dominion of Canada. The sooner that we learn that the conditions which prevailed before the war are not the conditions that will prevail after the war—are not the conditions that will dominate the future—just so soon will we commence to appreciate our wonderful new opportunities.

The old channels of trade have been buried in the past; old scale of wages have passed away; the old surplus of labor has gone; old shipping conditions have passed away; old easy-going systems of taxation are gone, for our lifetime at least; old antiquated methods, party distinctions and political ideas are passing away and all is new. New channels of trade, new sources of supply, new markets, new scales of wages, new shipping conditions, new standards of efficiency, and new political ideas making the narrow sordid aims of party—subservient to the welfare of the nation.

These changes are much more significant than they appear to us now. The Britain of to-day is not the same old Britain of before the war. The France of to-day is a new France. The Russia that calls for deliverance, and is to-day bursting the chains that have bound her for centuries, is a new Russia. The Germany that with bowed head and broken heart will sign the greatest peace treaty which was ever signed, will be a new Germany. And who will say that Canada, with the losses she has sustained, the sacrifices she has made, and the everlasting glory which has been won for her by her sons in battle—who will say that she will not emerge from this terrible trial a new and greater Canada?

Matter of Tariffs.

There are those who believe that after the war we will have international preferential tariffs which would be of the greatest assistance to manufacturers of this country. They predict that we will have, first of all, an inner circle for the members of the family of the empire, a British preference operating throughout all British Dominions; a second circle just outside of that for allied countries; a third circle outside of that for neutral countries; and a fourth and almost prohibitive circle for the production of enemy countries. For the reconstruction of our trade and our finances, what a splendid assistance this would be! If preferences come, we must be ready to reap the full advantage of them. But supposing we get no tariff preference, are we to sit down and say that just because we are not going to get a preference, we are not going to organize our natural resources and our industrial strength to show the world what we are and what we have? After all, I believe that what we need most is a new confidence in ourselves, and a willingness and determination on the part of Canadian business men to say that they want world business and that they are going to get it. It has been surprising to see the part that Canada has played industrially in the war, in fact it has been one of the great surprises of the war. Many of us do not realize that every plant that has been making shells in this country has undergone an experience in the widespread knowledge of new processes, in accuracy, in precision, in the study and use of metals, and, above all else, actual efficiency, from the management down to the meanest workman. It is a proud thing for us to know that the efficiency engineers who have visited our country and inspected the munitions plants here and have compared them with the munitions plants of Great Britain, have said that the Canadian plants are fully the equal of the plants across the sea, not only in the actual results, but in the efficiency with which these plants are managed. Our industrial progress since the beginning of the war has been so marked that it would have been impossible for the universities and technical schools of Canada to impart, in the course of many years, such a wealth of knowledge and experience as has been crowded into as many months.

Call for National Action.

But all this progress will be in vain unless we can gather it up and nationalize it. Here we must take a lesson from the success of Germany. Germany learned to do things nationally. Every source of production throughout the German empire co-operated and took its place in the great plan which was to place her at the head of the world. Her farmers and her manufacturers, her banks, her railways, her steamship lines, and, behind them all, her government, worked together to the one great end, which, had it not been inspired by Prussian militarism, would have made Germany in many ways a model of national and commercial progress. Canada must learn to act nationally and her business men must show the way.

The share of the world's trade which will come to us, depends altogether upon how we organize to get it. What is Canada doing to prepare herself for world trade? What are our manufacturers, and our banks, and our government doing to get ready for Canada's century? How much attention are the manufacturers giving to this big question? We should understand now that, unless we use these intervening

PROVINCE OF ALBERTA

FREE LAND FOR SETTLERS!

ALBERTA'S NATURAL RESOURCES are tremendous in variety and scope. Lands, Timber, Minerals and Water Powers are only in the infancy of development, providing large increments in value and affording unrestricted opportunity for the economical advance of the country.

EDMONTON, ALTA.

months till the war is over in organizing and consolidating our position, the coming of peace will find us absolutely unprepared. We must organize at home and abroad. We must demand national technical education. We must increase the efficiency and perhaps the capacity of our plants. We must tell the world what we can produce; and we must seek out reliable agencies and channels of trade in every friendly foreign market to sell Canadian goods.

Does not Foresee Depression.

I am not one of those who believe that after the war we will see a great and universal trade depression. There must come a period of readjustment, but we must distinguish between such a temporary condition and a world-wide trade depression. If we analyse the manufacturing strength of the allied countries, we begin to see to what extent after the war the allied countries must lean on Great Britain. Take the staple commodities of life: with the exception of the United States, she is the only one of the allies capable of producing the manufactured products demanded by the buying nations of the world. After the war, when the world's stocks must be built up again—they are practically depleted now in most lines—when reconstruction must commence in Belgium, France, Servia, Poland and Roumania—when that time comes Great Britain will only be able to fill a fraction of her orders. Enormous demands will be made upon her by every other allied country and her own country is thirsty for goods of many varieties; but where must the surplus goods—the orders that Great Britain cannot fill—come from? There is only one outlet for those orders, and that is the North American continent; the surplus orders must be filled in the United States and Canada and just in proportion as we can organize now to get ready, just in that proportion will Canada reap her share. War orders are very different from export orders. War orders have been thrust upon us, and we have been commanded to use every ounce of energy that we have to increase our production and give the armies at the front what they need. But we will not have export orders thrust upon us—they will not fall from the skies—we will dig for them; and so I say again, the whole key to the situation lies in organization, and if we do not organize we will surely fail.

No business man in Canada should dismiss this subject until he has decided that the opportunities are too great to be disregarded, the duty too clear and too insistent to be thrown aside, and, finally, that his hearty co-operation will be given in solving this problem which we must admit is of the greatest importance to Canada, next to the winning of the war.

FORESTS AS A NATIONAL RESOURCE

Our Commercial Forest Area is 400,000,000 Acres—Forest Fires Undiminished

BY R. H. CAMPBELL.

The present is a time when in the strong light of war conditions enquiry is being made as to the resources of Canada to meet the present situation and as the continuance of the war for an indefinite period in the future adds to the liabilities which must be met by the country, the question presses itself whether our resources will be equal to the great strain that will be placed on them. It is easy to dismiss the question with optimistic orations on the illimitable resources of Canada, but that will not be of a sufficiently substantial nature to satisfy the creditors who have to be paid in cold cash, nor will the inflation of the wealth of the country by the methods of the real estate boomster or the subsidized literary agent go far toward meeting real obligations. And there is nothing more pathetic than the light and easy way in which new organizations, public or private, undertake from time to time to make a survey of the natural resources of the country in the course of a few weeks or months. While there is no real fear in Canada that we will not finally meet our obligations whatever they may be, it should be realized that much of the optimism displayed has its origin in inferences which are not based on any wide foundation of real knowledge of the natural resources of the country or how they are being developed.

Nowhere is this more strikingly displayed than in connection with the timber resources of the country. The phrases, "illimitable timber wealth," "inexhaustible forest resources," that came so glibly from the tongue are still heard though they now come more falteringly and there is an uneasy feeling that there may be trouble ahead. In fact some of those who have given the subject most thought and are in the best position to know the actual situation, are not making statements that can be described as optimistic at all. In a recent speech in the Senate the following statement was made by Senator W. C. Edwards, one of the leading lumbermen of the Dominion:—

"Coming to the next industry which I have named, that of lumber, I think it will be agreed that with this I am somewhat familiar. I do not hesitate to make the statement that every province in the Dominion of Canada far overestimates its resources in this respect. There are many in Canada who even to-day believe that our resources in this respect are inexhaustible, and that it will only be a question of time until the United States will be exhausted of lumber and will have to turn to Canada for a supply. This idea, I assure you, is absolutely incorrect. The United States has as great a supply of lumber relatively to her wants as Canada has, and the total quantity of standing timber in Canada would not supply the wants of the United States for more than eight years. Canada was once a comparatively rich country in this resource, but bush fires and unwise administration of our timber resources on the part of the various provinces have brought about the unfortunate result I have named.

"In pulpwood we are considerably stronger than in timber for lumber manufacturing—of this there is no question; but, if our pulpwood resources are no better administered than our lumber resources have been in former years, they, too, will become exhausted much more rapidly than is at present anticipated."

After the War Question.

The whole question has an important bearing on the ability of Canada to meet the obligations resulting from the war. These obligations will be met mainly by exports of the products of the country. The products of the forest have had a place in the export trade of Canada second only to that of agricultural products. From Confederation to the present time the values of various classes of exports have been as follows:—Agricultural products, $2,010,298,011; animal products, $1,743,974,236; the forest, $1,418,568,514; the mine. $849,845,443; the fisheries, $485,298,526; manufactures, $898,623,720; miscellaneous, $20,857,806; total exports, $7,427,466,256.

Both the lumber and the pulp business are capable of larger expansion in Canada. The forest area of Canada, that is the portion that will bear a commercial forest and is not suitable for agriculture, may conservatively be put at 400,000,000 acres. The forest production of Sweden, with a forest area of 5,563,985 acres, is valued at $107,000,000. There is a question whether or not Sweden may be cutting over its annual production of timber, but the general opinion is that it is not and that this yield may be maintained permanently. Sweden is not now cutting virgin stands of timber but stands that are the result of forest management and replanting. The conditions of forest growth in Sweden are very similar to those in Canada and there seems to be no reason why an equal scale of productiin should not be reached and maintained here. The exasperating features of the situation is that Canada's forest resources are on the down grade, although we are not cutting as much timber relatively as Sweden, that the forests are becoming steadily poorer and less productive and that no adequate means have yet been taken to turn the tide in the other direction.

Forest Fires Undiminished.

The fire danger has not been controlled. Every year the loss runs into millions of dollars and the resulting deterioration of the type of forest means a still further loss of production that is incalculable. Almost everyone who discusses the forest situation in Canada asks: What are you doing in reforestation? Yet the same man will go out in the forest and drop a match or a cigarette stub, and in one fire burn up more young trees than could be planted in twenty years. A fire in Southern Manitoba this year destroyed 600 acres of vigorous young growth. To replant this would cost probably $10 per acre, or $60,000, and would require 600,000 young trees. Solely as a result of the inefficiency of a forest ranger one fire in another place ran over 14,000 acres. To replant this would cost $140,000 and take 14,000,000 young trees. Similar cases might be cited all over the country. And when

The Consumers' Gas Co.

OF TORONTO

The Consumers' Gas Company has a perpetual charter for the manufacture and sale of gas in the City of Toronto, Townships of York, Etobicoke, Vaughan, Markham and Scarboro.

The dividend is limited by statute to 10% on the paid-up Capital. After this dividend has been earned, and provision made for repairs and renewals, the Company must reduce the price of gas. The prices have gradually and voluntarily been reduced, during the sixty-nine years of the Company's history, from five dollars per thousand cubic feet to eighty cents. Moreover, the Company has acquired one of the finest and most up-to-date plants obtainable.

The output of gas for the year ended September 30, 1917, was over 4,200,000 thousand cubic feet, being approximately equal to the combined output of all the other gas companies in Canada. In addition, over $350,000.00 worth of merchandise was sold, and over $895,000 worth of residual products.

The present capital of the Company is $5,360,700. There is a reserve fund of $3,525,833.49, and a plant renewal fund of $1,608,312.80. Assets total $11,672,283.21. Profits for the past fiscal year were $953,306.61, after providing for all expenses of management and operation.

The reserve and plant renewal funds together equal 96% of the Company's capital, which funds are invested principally in the Company's business, with no interest charges against them. This means that the Company need earn only about 5% on the money invested in order to meet its dividend requirement of 10% on the capital stock. The Company has steadily maintained its 10% dividend for forty-three years.

The directors are Messrs. A. W. Austin, President; Wellington Francis, K.C., Vice-President; A. H. Campbell; F. Le M. Grasett, M.D.; John Hoskin, K.C., LL.D., D.C.L.; Herbert Langlois; Thomas Long; Lieut.-Col. J. F. Michie; Sir Edmund Osler, M.P. The General Manager is Mr. Arthur Hewitt; the Secretary, Mr. John J. Armstrong.

Table Showing Increase of Company's Business

Year	Population	Increase per cent.	Output of Gas M. Ft.	Increase per cent.	No. of Meters	Consumption per meter	Com. per Capital of Pop.	Miles of Main	Price of Gas per M.
1855	42,500	......	22,000	......	1,119	11,500	302	23	$3.00
1865	47,500	11.7	30,014	36.4	1,188	16,000	402	41¼	3.00
1875	68,678	44.6	100,122	233.9	2,508	26,500	969	66	2.50
1885	105,211	53.2	273,484	173.1	6,778	28,300	1,873	126	1.50
1895	190,000	80.0	614,553	124.7	20,626	25,000	2,883	227⅓	1.05
1905	250,000	31.5	1,374,114	123.6	39,711	31,334	5,496	302.06	.80
1917	500,000	100.0	4,202,516	205.8	108,719	36,797	8,001	585	.80

a continuous dry season occurs, as it does periodically, such areas of destruction occur all over the country and in greatly extended areas. Only an awakened public opinion which will result in fires not being started and which will insist on an efficient organization and service for fire prevention, with the efficiency of which no political influences will be permitted to interfere, can effect an adequate result.

The method in which the forests are being cut is resulting in heavy loss to the country. Forest operations are carried on with only the present crop in mind, and the result is the forests are steadily deteriorating.

Forests Steadily Deteriorating.

White pine forests have by a steady process of cutting out the pine and leaving inferior species wholly changed their character and now carry trees of less value and productiveness than the pine. Spruce forests are being so cut that they are becoming forests of fir, poplar and birch, trees of less value in every way and offering less material suitable for export. Before the commission of enquiry into the cost of paper production one company states that its pulp limits will be exhausted inside of fifty years, and another reports that it is each year writing off a considerable sum for deterioration in value of its pulpwood holdings. That is, these forests are steadily deteriorating although a proper system of forest management would bring about a greater stand of timber and a greater production in Canada while it would allow of cutting as large a crop of timber as is now being harvested. The latter statement seems paradoxical, but is proved true by the general results of forest management in Europe.

Such management can be brought about only by putting men technically trained as foresters on the actual scene of operations to study Canadian forest conditions in the light of their theoretical scientific knowledge and gradually bring about the changes in methods that are found necessary to the desired end. The improvement will not be brought about by the woods foreman or superintendent who has no conception of any new methods being required and no sympathy with them, nor will it be brought about by the lumberman whose chief concern is in the office and the marketing of the produce, nor by the forester who is an office theorist. Science and practise must reach an effective combination in the forest

White Pine Blister Rust.

There have been heavy losses in the forest from insects and fungi. Some years ago the larch sawfly largely wiped out the tamarack in eastern Canada. At the present time eastern Canada is facing a most serious situation in the danger to the white pine forests from the white pine blister rust. This fungus, which is much similar to the rust on wheat, has made the growing of American white pine an impossibility in Europe, and it was introduced into both the Untied States and Canada by shipments of white pine stock received from forest nurseries in Germany. The disease was probably introduced into the United States in 1900 on such stock, but shipments received in 1909 were in the worst condition and have been responsible for the wide spread of the disease which is now in all the states bordering on Canada as far west as Minnesota. It was in the latter year that the disease was introduced into Canada from Germany, but it was not discovered until 1914, when its presence was noted, and on investigation it was found to be widely distributed in the Niagara peninsula.

The study of the life history of the fungus and the necessary inspections to ascertain the places of infection were undertaken by the Dominion and provincial governments, and the present situation is that the disease has been found spread so generally in Ontario and Quebec that only the most active and heroic measures will stop its spread and even now it may be too late. As the rust spends one period of its development on currant bushes, it is apparently being distributed by shipments of such stock from nurseries. The only remedy is the destruction of both the currant bushes (wild and cultivated), and the white pine trees affected. If this is not done thoroughly over considerable areas the inevitable result will be that Canada will have to go out of the growing of white pine and after the present mature crop is harvested will have no more white pine to export and will have to substitute red pine, spruce or possibly Scotch pine. That is, Ontario and Quebec will have to go into the lumber export market with products of a lesser quality and will have to wait until the young white pine now growing is replaced by means of a costly system of planting of species that are immune to the disease.

These are some of the facts of the case and they indicate that there are serious difficulties to be overcome in placing forest production on a permanent basis so that the material required for home consumption and export may be provided. The forest is a peculiar crop. Compared with agricultural crops it requires a long time to reach maturity, and is, therefore, subject to many dangers before it can be reaped. On the other hand, it is a living thing and can be reproduced over and over again for all time and developed and improved by proper management.

The subject is not entirely one of Canadian concern. It is one of imperial importance. When the war broke out one of the first necessities that made itself felt in the British Isles was a supply of pit props for carrying on coal mining operations. The greater part of the wood used for this purpose had been imported from Russia, Sweden, Norway, Germany, France, Portugal and Spain. Steps were immediately taken to meet the situation, and by severer cutting in the British Isles and readjustment of imports the situation was met. A forestry committee was, however, appointed by the Imperial government to go into the whole question of timber supplies as it affects the British Isles, and although the report is not yet submitted it is understood that it will not only urge forest development in the homeland but point to the necessity of the protection and development of the forests of Canada, the main timber producing country in the Empire, thus accomplishing a patriotic work of imperial concern as well as one vital to the development and prosperity of the Dominion.

Future of our Forests.

Canada has of late years given some attention to the question of the future of the forests. The federal government and the provinces have forest fire acts and fire patrol systems in varying degrees of development and efficiency, but none of them adequate to the task in hand. The lumbermen, especially in the province of Quebec, have organized protective associations for the prevention of fire. But the fires still continue and in dry years the losses are heavy.

Forest management as it is practised in Europe, that is, so as to have the cutting operations result in improving the quantity and quality of the production, is practically unknown in Canada. A few tentative efforts are being made in that direction, but as yet with little effect on the general tendency.

Whether the white pine blister rust or the white pine will survive in the struggle is for the future to tell. If the former it will certainly not be the survival of the fittest, and the providing of a less valuable substitute for the white pine will be a long drawn out and costly procedure.

Conservation and Development.

Some of the main things that are required for the proper conservation and development of the Canadian forests are:—

1. A recognition by the public that the forest is an important resource of the country, that sixty per cent. of the area of the country will grow nothing but trees, and that the forest must be given a permanent place in our national economy.
2. Nation-wide co-operation for the prevention of fires.
3. Government forest services that shall be adequately manned and efficiently administered and freed from the evil of political patronage.
4. Forest surveys on recognized methods which will require a considerable expenditure over a term of years, to get definite knowledge of the forest resources of the country, developing gradually from the general survey to the more intensive one.
5. Proper provision for scientific investigation in connection with the forest. The federal government provides a whole department for such work in connection with agriculture and mines and although the forest is specially responsive to scientific treatment and is susceptible to many dangers, such scientific investigation as far as the forest is concerned is made a mere side issue in a branch of a department already overloaded with administrative work. France, Russia, Norway, Sweden, Denmark, Belgium, every country doing anything in forestry work has its regularly organized division of forest investigations and a series of forest experiment stations for carrying out special studies.
6. Proper forest management accompanied by replanting where necessary.
7. Co-operation in every way possible between the federal and provincial authorities in the interests of forest development.

DIVIDENDS AND NOTICES

DOMINION TEXTILE COMPANY, LIMITED

NOTICE OF DIVIDEND

A dividend of one and three-quarters per cent. (1¾%) on the Preferred Stock of the DOMINION TEXTILE COMPANY, LIMITED, has been declared for the quarter ending 31ST DECEMBER, 1917, payable JANUARY 15TH, 1918, to shareholders of record December 31st.

By order of the Board.

JAS. H. WEBB,
Secretary-Treasurer.

Montreal, 20th December, 1917.

PENMANS LIMITED

DIVIDEND NOTICE

Notice is hereby given that a Dividend of one and one-half per cent. has been declared on the Preferred Shares of the Capital Stock of this Company, for the quarter ending January 31st, 1918, payable February 1st, 1918, to Shareholders of record of January 21st, 1918; also a Dividend of one per cent. and bonus of one per cent. on the Common Shares for the quarter ending January 31st, 1918, payable February 15th, 1918, to Shareholders of record of February 5th, 1918.

By order of the Board.

C. B. ROBINSON,
Secretary-Treasurer.

Montreal, December 19th, 1917.

NOVA SCOTIA STEEL AND COAL COMPANY, LIMITED

DIVIDEND NOTICE

A dividend of two and one-half per cent. of the Ordinary Shares of the Company has been declared payable on January 15th, 1918, to Shareholders of record of December 31st, 1917.

By order of the Directors,

THOMAS GREEN,
Cashier.

New Glasgow, Nova Scotia, December 24th, 1917.

NOVA SCOTIA STEEL AND COAL COMPANY, LIMITED

DIVIDEND NOTICE

A dividend of two per cent. of the Preferred Shares of the Company for the quarter ending December 31st, 1917, has been declared payable on January 15th, 1918, to Shareholders of record of December 31st, 1917.

By order of the Directors,

THOMAS GREEN,
Cashier.

New Glasgow, Nova Scotia, December 24th, 1917.

CANADA CEMENT COMPANY, LIMITED

ORDINARY SHAREHOLDERS

DIVIDEND NO. 7.

NOTICE IS HEREBY GIVEN that a dividend of 1½ per cent. for the three months ending December 31st, 1917, being at the rate of 6 per cent. per annum on the paid-up Ordinary Stock of this Company has been declared, and that the same will be paid on the 16th day of January, 1918, to Ordinary Shareholders of record at the close of business December 31st, and that the Transfer books of the Company will be closed from January 1st to 10th inclusive.

H. L. DOBLE,
Secretary.

Montreal, December 15th, 1917.

Fidelity and Surety Bonds

The Guarantee Company of North America

(Founded by Edward Rawlings in 1872)

MONTREAL

THE BOARD OF DIRECTORS

President and Managing Director: HENRY E. RAWLINGS, Esq.
Vice-President: WM. MCMASTER, Esq., President Canadian Explosives, Limited.
SIR VINCENT MEREDITH, Bart., President Bank of Montreal.
E. F. HEBDEN, Esq., Man. Director, Merchants Bank of Canada.
JAMES B. FORGAN, Esq., Chairman, First National Bank, Chicago.
HON. E. C. SMITH, President, Cent. Vermont Ry. Co., St. Albans.
PHILIP STOCKTON, Esq., President, Old Colony Trust Co., Boston.
JOHN MACDONALD, Esq., John Macdonald & Co., Ltd., Toronto.
THOMAS DE WITT CUYLER, Esq., Commercial Trust Co., Philadelphia.
SIR AUGUSTUS NANTON, Financier, Winnipeg, Man.
FRANK SCOTT, Esq., Vice-President, Grand Trunk Railway System, Montreal.

This Company operates under a Dominion Charter.
It transacts its business in Canada and the United States.
Its investments in Canada are over $1,250,000.
Its assets and resources are over $2,500,000.

Toronto Agency: MEDLAND & SON, Mail Building
Winnipeg Agency: OSLER, HAMMOND & NANTON

SMART-WOODS, LIMITED

DIVIDEND NOTICE

A Dividend of One and three-quarters per cent. (1¾%) on the PREFERRED STOCK of SMART-WOODS, LIMITED, has been declared for the Quarter ending December 31st, 1917, payable December 31st, 1917, to Shareholders of record December 27th, 1917.

By order of the Board.

JOHN T. F. KEENE,
Secretary-Treasurer.

Montreal, December 19th, 1917.

THE BANK OF TORONTO

ANNUAL MEETING

The Annual General Meeting of Shareholders of this Bank will be held at the Banking House of the Institution, corner of King and Bay Streets, Toronto, on Wednesday, the ninth day of January next, the chair to be taken at noon.

THOS. F. HOW,
General Manager.

The Bank of Toronto,
Toronto, December 1st, 1917.

Credits by the United States to the allies passed the four billion-dollar mark on December 29th, when Treasury Secretary McAdoo authorized additional loans of $185,000,000 to Great Britain for January purchases in the United States; $155,000,000 to France; $7,500,000 to Belgium, and $1,000,000 to Serbia. Last Saturday's total was $358,500,000, and the total credits to the allies to that date were $4,236,400,000.

Canada's Wheat Grain, Root, and Fodder Crops

Government's Preliminary Estimate Shows That Last Year's Field Crops Are Worth $1,089,687,000—The Crop Record of The Monetary Times

Field crops of Canada.	1915. Per bushel.	1915. Total.	1916. Per bushel.	1916. Total.	1917. Per bushel.	1917. Total.
Wheat	$0.91	$356,816,900	$1.31	$344,096,400	$1.95	$ 451,874,000
Oats	0.36	171,009,100	0.51	210,957,500	0.60	236,142,000
Barley	0.52	27,985,800	0.82	35,024,000	1.00	51,684,000
Rye	0.77	1,921,900	1.11	3,196,000	1.50	6,359,700
Peas	1.65	5,724,100	2.22	4,919,000	3.00	10,117,800
Beans	3.05	2,206,800	5.40	2,228,000	7.00	9,727,900
Buckwheat	0.75	5,913,000	1.07	6,375,000	1.20	9,860,400
Flax	1.51	9,210,400	2.04	16,889,900	3.00	20,618,100
Mixed grains	0.57	10,062,300	0.88	9,300,900	1.00	15,461,400
Corn for husking	0.71	10,243,000	1.07	6,747,000	1.00	9,177,400
Potatoes	0.60	36,459,800	0.81	50,982,300	1.00	81,355,000
Turnips, etc.	0.24	14,588,700	0.39	14,329,000	0.46	29,253,000
	Per ton		Per ton.		Per ton.	
Hay and clover	14.37	152,531,600	11.60	168,547,900	10.40	142,320,300
Fodder corn	4.91	16,612,600	4.92	9,396,000	5.18	10,900,900
Sugar beets	5.50	775,500	6.20	440,000	6.75	793,800
Alfalfa	12.68	3,309,100	10.69	3,066,000	11.59	3,041,300
Totals	.....	$825,370,600	.....	$886,494,900	.....	$1,089,687,000

The above is the preliminary estimate of the census and statistics office, Ottawa, issued on November 30th, of the value of the field crops last year, compared with the finally revised estimates for 1915 and 1916. The total for 1917 is $1,089,687,000, which is 22 per cent. greater than the total for the previous year. This is the first time that the estimated value of the field crops of Canada has reached $1,000,000,000, that large figure being due to the high prices now ruling. The estimated value for 1917 represents the prices received by farmers, being calculated from market quotations in October. They are subject to revision after the compilation of returns from correspondents in December. The final estimates of value for 1917 will be issued by the census and statistics office this month.

Probable Demand for Wheat and other Cereals upon Canada and the United States

The following table, compiled in October last, shows the normal peace sources of the annual supplies of wheat of France, Italy, the United Kingdom and Belgium, being an average of the three-year prewar period:—

Commodiay.	Production. Bushels.	Imports from United States. Bushels.	Imports from Canada. Bushels.	Net imports, other sources. Bushels.	Consumption. Bushels.
Wheat	590,675,000	79,426,000	112,900,000	188,478,000	974,485,000
Corn	121,109,000	10,811,000	....	135,675,000	266,596,000
Oats	570,890,000	6,783,000	16,580,000	88,612,000	682,865,000
Barley	125,201,000	4,946,000	6,660,000	63,030,000	199,793,000
Rye	78,573,000	567,000	60,000	11,309,000	90,537,000
Total	1,486,448,000	102,533,000	136,200,000	487,134,000	2,214,276,000

It will be seen from the above that the normal imports of wheat are 381,000,000 bushels, and of other cereals 345,000,000 bushels. The estimate of the 1917 harvest in the allied countries, based upon crop reports from these countries, is as follows:—

Commodity.	Probable 1917 porduction. Bushels.	Average normal production. Bushels.	Deficiency in production due to war. Bushels.
Wheat	393,770,000	590,675,000	196,905,000
Corn	94,464,000	421,109,000	26,645,000
Oats	337,235,000	570,890,000	233,655,000
Barley	93,585,000	125,201,000	31,616,000
Rye	41,732,000	78,573,000	36,841,000
Total	960,786,000	1,486,448,000	525,662,000

In order to provide normal consumption it would therefore be necessary to import in the next 12 months a total of 577,000,000 bushels of wheat and 674,000,000 bushels of other cereals. North America will have an apparent surplus of wheat of 208,000,000 bushels and of other cereals of about 950,000,000 bushels.

The prospective position of the United States and the Canadian harvest was estimated in October as follows:—

Commodity.	Probable United States, 1917. Bushels.	Average normal United States consumption. Bushels.	Probable United States surplus. Bushels.	Add possible Canadian surplus. Bushels.
Wheat	678,000,000	509,304,000	88,000,000	120,000,000
Corn	3,124,000,000	2,653,698,000	470,000,000	62,000,000
Oats	1,453,000,000	1,148,713,000	304,000,000	30,000,000
Barley	214,000,000	178,829,000	35,000,000	9,000,000
Rye	56,100,000	35,866,000	20,200,000	18,000,000
Total	5,525,100,000	4,607,410,000	917,200,000	239,000,000

The allies are isolated from those markets other than Canada and the United States, on which they were accustomed to rely before the war. The Russian supply cannot be got out. Bulgarian and Roumanian supplies are in the hands of the central empires. The voyage from Australia and India is three times as long, and therefore requires three times as many tons of shipping as is required from North Atlantic ports. It is also twice as dangerous, because of the longer exposure to submarine attack. There has been a large failure in the South American countries, and the new harvest from that quarter will not be available in Europe until next spring All the allied countries are, and have been for some time, rigorously administering and economizing their food. In

Belgium the relief commission has been compelled to reduce the consumption of cereals by nearly 50 per cent.; this brings the food supply so low that the population are incapable of labor.

From the above tables it will be seen that on normal bases of consumption the total allied wheat import requirements are 577,000,000 bushels against a North American surplus of 208,000,000 bushels. From the United States supplies must be reserved a certain amount for neutrals from which the United States receive vital supplies and also an amount to protect the United States stocks better this year than last. There is therefore on normal consumption a deficit of over 400,000,000 bushels.

In the other cereals used in Europe mostly for animal feed, the import necessities of the allies on normal consumption basis are about 674,000,000, against a North American surplus of 950,000,000, but again a reserve for neutrals and increased "carry over" will absorb all the margin. In any event it means the United States must multiply its exports of these cereals 20 times. However, upon the present season's crops, it should be possible to supply the requirements of the allies in cereals other than wheat.

CANADA'S GRAIN ELEVATORS

Canada has 3,200 grain elevators at 1,340 stations, including terminals, with combined capacity of nearly 185,000,000 bushels. The three prairie provinces have more than 3,000 grain elevators at 1,320 stations with combined capacity of 106,000,000 bushels, or much more than one-half of the total.

Fort William and Port Arthur, at the head of the lakes in Ontario, have the big terminal elevators, the former having 19 with 27,770,000 bushels capacity, and the latter six with 15,315,000 bushels capacity, a combined total of 25 elevators and 43,085,000 bushels. The Canadian Pacific's terminal is Fort William, and the Canadian Northern's is Port Arthur.

Total Ontario private elevator capacity, including that at the head of the lakes, is less than 45,000,000 bushels, while that of British Columbia is only 1,725,000 bushels, represented by eight elevators and one warehouse. Ontario has also 14 public elevators, with 18,350,000 bushels capacity. Quebec has five with 8,400,000; New Brunswick, two with 2,000,000; Nova Scotia, one with 500,000. Total public elevators 22, with 29,250,000.

FACTORY EMPLOYEES WELL PROTECTED

Outline of the New Legislation in Alberta—No Children Under Fifteen Years Employed

By E. B. WILLIAMS.

The western provinces have been credited with advanced legislation. There is a great looking to the future here, consequently our legislation is often in advance of the fact. We have not many manufactories, but we have always had the raw material, and now we have the transportation and are getting the population. Last session the Alberta legislature passed "An act for the protection of persons employed in factories, shops and office buildings." Most of the older provinces have had a factories act for years, and in drafting ours we had the benefit of the statutes and experience of the older members of the Confederation family.

In our act those protected are brought under two heads—children and women. Any one who is under 15 years of age, the termination of compulsory school age, is known in the act as a "child," and any female over 15 is a "woman."

We have regulated minimum age and wage and maximum hours of labor. The hours of labor are regulated by "shifts." The "day shift" maximum is from 7 a.m. to 6 p.m., with one hour between 11 and 2 for meals, and the night shift must not exceed 8 hours with a similar hour for meals. If any part of a shift is before 7 a.m. or after 6 p.m., it is deemed a night shift and therefore becomes an 8-hour shift. No person may be employed for more than one shift in one day.

No "child" may be employed in any factory, shop, office or office building. No person shall receive less than $1.50 per shift, except an apprentice whose minimum wage is $1. Wages are payable semi-monthly.

In most other respects the acts of the older provinces were used as guides, but in the above respects the employees' interests as such touch them most keenly and intimately are protected for the first time in Canada by legislation embodied in the factories act.

The city of Saskatoon is served by three railways, the Canadian Pacific, the Canadian Northern, and the Grand Trunk. Its central location makes it one of the best distributing centres in Saskatchewan. Cheap power is supplied by the city.

CANADIAN RAILROAD EARNINGS

The following are the approximate gross earnings of Canada's transcontinental railroads month by month.

	Canadian Pacific Railway			Grand Trunk Railway			Canadian Northern System		
Month	1916	1917	Increase + Decrease –	1916	1917	Increase + Decrease –	1916	1917	Increase + Decrease –

HOW OUR FOUR WAR LOANS WERE ALLOTTED

Subscriptions of	First Loan, November, 1915 ($100,000,000)	Second Loan, September, 1916 ($100,000,000)	Third Loan, March, 1917 ($150,000,000)	Fourth Loan, November, 1917 ($400,000,000)
(1) $25,000	.....	In full	In full	In full
(2) From $25,000 to $100,000	All subscriptions of $50,000 and under in full. Subscriptions, except banks, for amounts over $50,000, in full, with privilege of withdrawing subscriptions	First $25,000 in full; remainder 30 per cent.	First $25,000 in full; remainder 80 per cent.	In full
From $100,000 to $1,000,000	.....	Of first $100,000, $25,000 in full, remainder 30 per cent; above $100,000, 40 per cent.	Of first $100,000, $25,000 in full, remainder 80 per cent.; above $100,000, 70 per cent.	Over $500,000 and up to and including $1,000,000, $500,000 in full and 75 per cent. of the balance
In excess of $1,000,000	.....	Of the first $1,000,000, $25,000 in full, and remainder 40 per cent; above first $1,000,000, 26 per cent.	Of the first $1,000,000, $25,000 in full, and the remainder 70 per cent; above first $1,000,000, 45 per cent.	Over $1,000,000, $500,000 in full and 75 per cent. of the balance for first million, and 50 per cent. of amount in excess of first $1,000,000.

NOTE.—First loan—Subscribers, other than the chartered banks, for amounts exceeding $50,000 were allotted their subscriptions in full, but were allowed to withdraw or reduce the amount of their subscriptions by written notification lodged with the finance department on or before December 18th, 1915. The chartered banks, which subscribed an aggregate of $25,000,000. were allowed to take such portion of their subscription as they desired, but so that the total issue did not exceed $100,000,000. Of the total loan so increased to $100,000,000, the Government employed $50,000,000 to establish a credit with the finance department for the Imperial treasury. Second loan—No allotments of the $50,000,000 subscribed by the banks were made, but a credit of $50,000,000 was established here for the Imperial treasury.

How Can We Maintain Trade?

PROBLEMS of Our Export Business—Work for Individual Manufacturers—United States Has 30 Per Cent. of the World's Import Trade and Canada 6 Per Cent.—Manufacturers May Find Assistance in Co-operation—We Shall Be Seeking Business After the War and Will Meet Strong Competition.

By **WILLIAM LEWIS EDMONDS**

THAT the greatness of a nation industrially depends upon the development of its export as well as that of its home trade the facts of history amply prove.

First in importance as the home market undoubtedly is to manufacturers and producers generally, taking as it does in normal times approximately 80 per cent. of the merchandise the country produces, yet the industrial development of the Dominion would be seriously handicapped were it not for its export trade.

During the last three years, owing to the conditions created by the war, the export trade of the Dominion has assumed an importance immeasurably greater than at any time in the history of the country. The year the war broke out the value of the total exports was $478,997,928. During the last fiscal year it reached the enormous sum of $1,375,758,148, an increase of $896,760,220, or 187 per cent. But great and all as this increase was, its chief importance lies in the fact that it came at a time when it was urgently needed. Had it not come when it did the financial and commercial life of the country would to-day be in anything but the prosperous condition it is. It undoubtedly tided us over what threatened in the fall of 1914 to be a serious crisis in our history.

And now that the export trade has tided us over one crisis much thought is being given to its potency in the future development of the industrial life of the country, and particularly during the period of adjustment that must inevitably follow the close of hostilities.

That to a certain extent the development which has taken place in the export trade of the Dominion will be maintained, there can scarcely be any doubt. Where there is a doubt, it is in regard to the extent the development will be maintained. Had the expansion, enormous and all as it is, taken place under normal conditions, there would, in all probability, be less concern than there is at present concerning the future of the trade. But, unfortunately, the conditions were not normal. On the contrary, they were decidedly abnormal.

Notwithstanding, however, the fact that the expansion of the export trade during the last three years took place under abnormal conditions, it is imperatively necessary that when normal conditions again prevail, it should be maintained on a scale as closely approximating to that of to-day as is possible.

And that which makes it particularly necessary that it should be so maintained, is the fact that although our export trade since the outbreak of the war has increased to the extent of 187 per cent., the national debt of the country will, by the end of the present fiscal year, have increased by practically the same percentage, if the estimate of the minister of finance proves to be correct,

That in turn will mean an enormous increase in the interest charges which we shall be compelled to pay annually on our foreign indebtedness. Prior to the outbreak of the war our annual interest charges on public and private borrowings were estimated to be from $135,000,000 to $140,000,000. Some months ago, according to estimates made by both Sir Thomas White and Sir Frederick Williams-Taylor, it had reached $180,000,000.

Provided we can maintain our export trade at its present high standard, or at any rate maintain it at its present relative proportion to the import trade, thereby preserving the average favorable trade balance of the last two years, there will be no need for uneasiness, particularly in view of the fact that the annual combined productive value of the farms, factories, forests, fisheries and mines has reached a sum in excess of three billions of dollars.

That it will be no easy matter to maintain in the time of peace the increase which has been experienced in the export trade during the past three years of the war may be taken for granted, particularly when the fact is taken into account that of its total $284,474,137, or over 20 per cent. of the whole, consisted of munitions, arms and explosives. But while it may not be an easy matter to maintain the export trade at its present value, or even at its present proportion to the import trade, it is not an impossible task. At any rate it does not seem as impossible as three years ago it would have been deemed possible to increase it by 187 per cent. in that period. On the eve of the day that saw the outbreak of the war it was a decrease rather than an increase that most people anticipated.

One thing is certain: The market will be there. For of the aggregate approximate twenty billion dollar import trade of the countries of the world, only about 6 per cent. is supplied by the exporters of the Dominion compared with about 30 per cent. by the United States.

Of the total export trade of $1,375,758,148 during the last fiscal year $756,071,077 was with the United Kingdom, $486,870,690 with the United States, and $132,816,381 with all other countries.

It naturally follows that in order to maintain this trade when peace again obtains it will be necessary to increase it in ordinary commodities to an extent sufficient to cover the inevitable loss which will take place when the export demand for munitions and other war material ceases to exist. It is when that period arrives the real test will come.

Under the conditions obtaining during the last three years it has been a comparatively easy matter to carry on the export trade, owing to the fact that buyers abroad have sought our various products to an extent unparalleled in our experience. When peace, with its normal trade conditions again obtains the order will be reversed. We shall be seeking their business, and in the seeking of it will have to meet the competition of other exporting countries. When that time arrives the manufacturers and producers generally will be in a much better position than they were in ante-bellum days to compete for business in the importing countries of the world.

In the first place the experience of the past three years has enabled them to acquire a much wider knowledge regarding both the requirements of the foreign market and of the ways and means best calculated to supply them. In the second place they have from their experience acquired much greater efficiency in methods of production and in the science of business management generally. In the third place, manufacturers and producers generally are in a much stronger position financially. Not only is this self-evident, but even better proof than this is furnished by the bankers of the country, who tell us that during the period of prosperity, through which we have been passing, the manufacturers of the country have not only been able to liquidate their liabilities, but that they have been able to create substantial rest accounts to an extent unparalleled in the history of the Dominion.

But while these conditions provide a favorable foundation upon which to build an export trade of a character more permanent than that which has been stimulated by the war they will not in themselves carry us very far. If we would go farther, and for reasons already pointed out we should go farther, greater effort, both individual and co-operative, must be put forth.

Work for Individual Manufacturer.

The individual manufacturer must make an effort to acquire all possible information regarding the foreign market in which he desires to sell his goods. He must not only ascertain the kind of goods they want, but the peculiar way in which they want them made, how they want them packed, and the terms of payment in vogue. Then there are certain well established facts that he must recognize. In the first place he must recognize that when he sells goods his invoices should be made out in the currency of the country in which his customers reside. In the second place when he receives an inquiry from a country in which a language other than English is spoken, his reply should be written in that language, whether it be Russian, French, Spanish, Italian or otherwise. If, in addition, he sends a catalogue, he should furnish a translation of that part of it which deals with the particular article or articles regarding which information is desired.

When a representative is sent to solicit business in a foreign country, he should be one who is able to converse in the language of that country. Otherwise he will be of very little use no matter how proficient he may be, generally speaking, as a salesman.

Co-operation Is Necessary.

While none of us can agree with the "peaceful penetration" object of Germany, yet we must recognize the fact that in the carrying of it out she reduced her methods to a science. Her exporters acquired complete knowledge regarding the requirements of every country whose market she desired to penetrate, while the representatives she sent were proficient as linguists as well as salesmen. They knew their business from A to Z.

While individual effort is, as a rule, the best when possible, in order to build up a satisfactory export trade, yet individual effort is not possible in all cases. As a rule, it is only the larger firms that can undertake it. But no manufacturer need be precluded from participating in the export trade because of his size. Two avenues are open to him. He can either co-operate with one or more manufacturers, or he can employ the services of a concern whose special business is to develop the export trade for manufacturers generally and are equipped with branch offices at important trade centres throughout the world.

There is still another method of co-operation which Canada should develop, and that is one which embraces the department of trade and commerce, the transportation companies, and the banks as well as exporters themselves. It was largely due to co-operation of this kind that Germany was enabled in a comparatively few years to build up the enormous export trade that she did prior to the outbreak of the war. And that which co-operation of this kind did for Germany can, to some extent at least, be done for Canada.

The export trade may be complex and in the cultivation of it Canada's position may be less favorable than that of certain older countries, but the experience of the past three years afford much encouragement for the undertaking of that which the general welfare of the country demands should be undertaken—namely, a more intensive and wider spread development of its export trade.

FINANCING BY THE UNITED STATES

Nation Will Spend $16,000,000,000 During Current Fiscal Year—Must Finance Allies' Purchases

The war finance arrangements of the United States last year assumed very large proportions. In July, secretary of the treasury McAdoo stated that expenditures for the current fiscal year for purposes of that country would amount to about $11,000,000,000. That sum omitted prospective advances to the allies which, at the rate of such loans in 1917, would bring expenditures for the fiscal year up to $16,000,000,000 or more. This total eclipses the annual expenditures of Great Britain, where, up to the present, the cost of the war has fallen heaviest. In the eight months from the outbreak of the war to the end of the British fiscal year, the outgo through the Exchequer, including ordinary governmental expenses, was $2,485,000,000; in the next twelvemonth, it was $7,800,000,000; while in the year ended March 31st last, it was approximately $11,000,000,000.

At about the time Mr. McAdoo was submitting his estimates in July, chancellor of the exchequer Bonar Law, of the United Kingdom, was saying in the House of Commons that: "We can rely on receiving in the United States resources which are necessary to pay for supplies of all kinds required by the allies in America," much of that expense having previously been borne by England. Further, it was an open secret, he added, "that we had spent so freely of our resources that those available in America had become nearly exhausted."

The first loan of the United States to the allies since its entrance into the war was made to Great Britain. The amount, $200,000,000, was made available out of the proceeds of the $5,000,000,000 Liberty Loan bond issue, of which $3,000,000,000 it was proposed should be loaned to the allies. The first block of $2,000,000,000 of Liberty Loan bonds was offered in June. In reaching the decision to make the first loan to Great Britain, the United States was influenced by the knowledge that Great Britain, as banker for the allies prior to the United States' entrance into the war, had met the heaviest financial strain imposed upon any of the entente governments.

In making the loan the United States accepted British bonds bearing three and a half per cent. interest as security. These bonds were deposited in the United States treasury, and the interest payments made upon them—at a rate considerably lower than that which Great Britain had had to pay for previous borrowings—will balance the payments made by the United States to holders of the American bonds. A similar course was proposed in making loans to other allied nations.

NEW BANK NOTE DESIGNS

The Canadian Bank of Commerce have in course of preparation a new series of bank-notes, which are in originality and beauty of design, a marked advance over those at present in circulation. The designs are copyrighted in Canada, the United Kingdom and the United States, and they will be the bank's exclusive property. The work of engraving the plates is a slow and tedious process and some of the notes will not be completed for several years, but the smaller denominations will be put into circulation during the current year.

WIDER INVESTIGATION OF PAPER SITUATION

The investigation by Royal Commissioner R. A. Pringle, K.C., into the paper situation, in so far as it relates to the requirements of book or magazine publishers, was adjourned on Wednesday to be resumed later after an expert accountant had visited the various mills and reported to the commissioner facts and figures in regard to production costs.

An inquiry into the newsprint situation was again resumed when the commission met yesterday. The paper manufacturers claimed that there should be corresponding inquiry and publicity in regard to the publishing business if their cost of production and profits was made public.

It was then that Commissioner Pringle referred to the necessity of widening the enquiry so as to trace up the profits and costs of the publishers as well as the manufacturers.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

DECEMBER FIRES

Calais, Alta.—December 29—Candy factory of Beckett and Company destroyed. Estimated loss, $30,000.

Camrose, Alta.—December 22—Mrs. Hilland's millinery store. Caused by defect in stove pipe.

Canyon, B.C.—December 26—Boarding house of Canyon City Lumber Company destroyed. Estimated loss, $1,500.

Edmonton, Alta.—December 25—Moses Lyons' store destroyed. Buildings and stock of Cockshutt Plow Company, Limited, destroyed. Estimated loss, $20,000.

Fort William, Ont.—December 31—House of Peter Robbins damaged.

Grand Mere, Que.—December 31—Premises and stock of Edmond Doyon damaged. Estimated loss, $12,000.

Halifax, N.S.—December 27—Clayton Military Convalescent Home destroyed. Estimated loss, $50,000.

Keeler, Sask.—December 29—Office of Agiboie's Elevator Company damaged.

Kitchener, Ont.—December 29—Home of Mr. and Mrs. A. Wolfield was destroyed. Estimated loss, $2,000.

Lachine, Que.—December 31—Premises of Rapid Tool Company and structure containing thirty-five automobiles destroyed. Estimated loss, $55,000.

Montreal, Que.—December 26—Three-story blocks of buildings destroyed. Estimated loss, $40,000.

December 29—Several stores destroyed on St. Viateur Street. The losers were: Michell's millinery shop, Archambault Tailoring and the Nap. Girourard restaurant. Three dwellings on Waverley Street destroyed. The losers were: Mrs. C. Leduc, Octave Vermette and Mrs. E. Duncan. Estimated loss, $40,000. Tenement on City Hall Avenue damaged.

Moose Jaw, Sask.—December 26—Farm house of Mr. and Mrs. George Ross destroyed. Estimated loss, $400.

Ottawa, Ont.—December 30—Office in House of Commons, Parliament Buildings was damaged. Borbridge block was destroyed. Estimated loss, $175,000.

Owen Sound, Ont.—December 28—Shed at rear of residence of Mrs. Hatton destroyed. Estimated loss, $300.

Quebec, Que.—December 28—House of R. Baker damaged. Estimated loss, $500.

Rapid City, Man.—December 22—Home of G. P. Wastle destroyed.

Regina, Sask.—December 27—Imperial Oil Company's plant damaged. Caused by explosion of condenser box. Estimated loss, $30,000.

Sault Ste. Marie, Ont.—December 27—The Pearl Laundry was destroyed. Estimated loss, $50,000.

Sherbrooke, Que.—December 27—Store of O. F. Ticehurst destroyed. Estimated loss, $9,000.

Simcoe, Ont.—December 30—Storehouses of Simcoe Wood Stock Company destroyed. Cause, incendiarism. Estimated loss, $25,000.

Three Rivers, Que.—December 30—Building at No. 111 Bonaventure Street destroyed. Estimated loss, $50,000.

Toronto, Ont.—December 27—Once a Week newspaper printing plant damaged. Estimated loss on building, $350; on contents, $500.

Windsor, Ont.—December 29—Home of Thos. Dufour destroyed. Caused by defective chimney. Estimated loss, $3,000.

December 30—Hydro office destroyed. Estimated loss, on building, $18,000; on stock and fixtures, $25,000.

Winnipeg, Man.—December 25—Eaton employees' lunchrooms destroyed. Estimated loss, $2,000.

December 28—Liquor store of Rosenthal and Adelman damaged. Caused by overheated furnace. Estimated loss, $100.

December 29—Parkyte grease and oil store and stock, owned by Myer Rosenthal, damaged. Estimated damage to store and stock $150.

JANUARY FIRES

Beaconsfield, Que.—January 1—Summer residence destroyed.

Chatham, Ont.—January 6—Plant of Pittsburg and Des Moines Steel Company damaged. Caused by conflagration after two explosions. Estimated loss, $8,000.

Cornwall, Ont.—January 7—Turdif Block, owned by J. H. Turdif, of Montreal, was damaged. Estimated loss, $5,000.

Earlscourt, Ont.—January 2—St. Clair garage damaged. Caused by hot ashes. Estimated loss, $25.

Hartland, N.B.—January 4—C. H. Taylor's brick block destroyed. Estimated loss, $18,000.

Hamilton, Ont.—January 2—Frame shed of the Steel Company of Canada damaged. Estimated loss, $200.

January 7—Cooperage department of the Steel Company of Canada destroyed. Estimated loss, $10,000. Royal Theatre damaged. Estimated loss, $100.

Valleyfield, Que.—December 13—The Montreal Cotton Mills Company lost $100,000 when their plant was damaged. Insurance is carried in the New England Mutual Company.

Victoria, B.C.—December 31—Fire Chief Thomas Davis reports the loss on buildings and contents and the insurance carried thereon as follows: Loss, buildings, $79; contents, nil; total, $79; insurance, buildings, $2,350; contents, nil; total, $2,350; property at risk, $43,000.

Wallaceburg, Ont.—December 10—The Dominion Sugar Company, which was destroyed, carries a total insurance of $96,300, which is divided among the following companies: New York Underwriters, $7,500; Aetna, $2,500; St. Paul, $5,500; Home, $10,000; British America, $15,000; Caledonian, $7,500; North British and Mercantile, $7,500; Ocean, $1,300; Law Union and Rock, $5.000; Phœnix of London, $10,000; Union, $5,000; Commercial Union, $5,000; Connecticut, $6,250; Yorkshire, $6,250. Loss is approximately 50 per cent. of the total insurance.

Winnipeg, Man.—December 22—The Crown Elevator Company's plant, which was destroyed, carries insurance which is divided among the companies as follow: Insurance on contents, North British, $20,000; London and Lancashire, $12,500; American Central and Sun, $7,500 each; North America, $6,500; Royal Exchange, $5,500; Aetna, Calumet, Firemen's Fund, Hamilton, London Assurance, Niagara, National Union and Union of London, $5,000 each; Liverpool and London and Globe, $4,500; Pacific Coast, $3,500; Delaware Underwriters, Fidelity Underwriters, Union of Paris, Norwich Union, Ocean, Providence-Washington, Palatine, Phœnix of Hartford, Quebec, St. Lawrence Underwriters. Scottish Union and Yorkshire, $2,500 each; North-Western National, $1,500; American Underwriters, $1,000; total, $140,000. Loss estimated at 68 per cent. owing to over-insurance. Insurance on building, Lloyds', $10,000; Caledonian, Firemen's of Newark, Imperial Underwriters, Union of Paris, $5.000 each; Yorkshire, $4,500; National Union, $4.000; Aetna, American Central, British Colonial, Continental (N.Y.). Delaware, London and Lancashire, Liverpool-Manitoba, Norwich Union, North Empire, Occidental, Pacific Coast, Palatine, Quebec, Royal Exchange, St. Lawrence Underwriters, Scottish Union, Sun, $2,500 each; Dominion, Firemen's Fund, Guardian, London Guarantee, London Assurance, National Benefit, Providence-Washington, $2,000 each; Fidelity Fire, Hamilton, Liverpool and London and Globe, National Fire and Marine, $1,500 each; Union of London, $1,250; American Underwriters, Continental (Winnipeg), Great American, Globe and Rutgers, Ocean, Phœnix of Hartford, $1,000 each; St. Paul, $750; total, $109,000. Loss, 85 per cent.

Westmount, Que.—January 2—The Arena, which was destroyed, carries a total insurance of $50,000, which is divided among the following companies: Home, $5,000; Liverpool and London and Globe, $10.000; Guardian, $20,000; Northern, $2,000; Royal, $5,000; Sun, $5,000; Union, $3,000. The building is stated to have cost $75,000 20 years ago.

NEW FIRM TAKES OVER BANFIELD BUSINESS

The business of J. J. Banfield, Vancouver, was taken over on January 1st by the incorporated company of Banfield, Gunther and Black, Limited, who will carry on the business in the same city. Mr. Banfield has been actively engaged as general agent for the Norwich Union Insurance Company and in the mortgage, loan and real estate business. Colonel E. F. Gunther went to British Columbia from Toronto several years ago to become superintendent of insurance for the province of British Columbia. He resigned several months ago to re-enter the insurance field. Mr. Black has long been associated with Mr. Banfield as office manager. The new firm have the good wishes of their many friends.

INTERNED GERMAN SHIPS

All the damage done to 109 German ships by their crews, prior to their seizure by the United States government when war was declared, has been repaired and these ships are to-day in service, adding more than 500,000 gross tonnage to the transport and cargo fleets in war service for the United States.

There is evidence that a German central authority gave an order for destruction of these ships, effective about February 1st, 1917, simultaneously with the date set for unrestricted submarine warfare and that the purpose was to inflict such vital damage to the machinery of all German ships in United States ports that none could be operated for from eighteen months to two years. This purpose was defeated in signal fashion. In less than eight months all the ships were in service.

The destructive campaign of the German crews comprehended a system of ruin which they believed would necessitate the shipping of new machinery to substitute for that which was ruthlessly battered down or painstakingly damaged by drilling or dismantlement. There is documentary proof that the enemy believed the damage irreparable. To obtain new machinery would have entailed a prolonged process of design, manufacture, and installation. Urged by the necessity of conserving time, the engineers of the United States Navy Department succeeded, by unique means, in patching and welding the broken parts and replacing all of the standard parts which the Germans detached from their engines and destroyed or threw overboard.

American ingenuity, as our friends at Washington have stated, defeated German malice and craft by restoring to service 109 badly damaged interned ships. We must not, however, overlook the part played by the British Navy in keeping those 109 ships bottled up in United States ports, in many cases for years.

NECESSITY OF ORGANIZATION

We must so co-ordinate the productive forces of the nation that there will be the nucleus of a new organization already prepared to utilize the labor of the unemployed in the production of food and in its distribution and transportation to the great markets abroad. This was the statement of Sir John Aird, general manager of the Bank of Commerce at the annual meeting of that institution this week. It is another reminder that we in Canada must organize and get nearer to a war basis. To-day there is employment at high wages in war industries. Money is plentiful and is being freely spent. But there will come a time, as Sir John said, when high taxation and uncertainty as to the future will make men hesitate to embark on new enterprises, when there will be double the number of applicants for half the number of jobs and when food will be still more scarce than it is at present. Only then shall we realize the full effects of the high cost of living. How shall we prepare for that day? "The great need of the world will then be abundance of food, at reasonable prices," said Sir John, "and if we in Canada by stimulating production, transportation and distribution, are able to supply the nations in abundance, we shall not only have laid broad and deep the foundations of prosperity for ourselves, but shall have earned the gratitude of the nations. We shall have found a way to utilize the services of the unemployed and to lower as far as possible the high cost of living." The machinery for accomplishing this cannot be created on the spur of the moment, and we must equip ourselves beforehand to cope with the changed conditions which will prevail after the war. Our national organization must be made efficient now to cope with post-bellum problems.

FIRE WASTE

According to the record of *The Monetary Times*, the fire waste in Canada last year amounted to $20,086,000. This is exclusive of the losses estimated at over $1,000,000 due to explosion and fire in the Dragon munition plant in Quebec province. The Commission of Conservation records even a higher total, namely, $23,251,000, represented by 14,092 fires. More than $15,600,000 of damage resulted from 76 fires. *The Monetary Times'* records show that there were at least 238 fires involving a loss of $10,000 or over. The average monthly fire waste exceeded $1,500,000. Taking our population at 7,800,000, the fire waste per capita was $2.60.

The Commission of Conservation has drawn attention to these losses in a striking way. It points out that the Canadian government pays $2,000,000 a month in separation allowances to soldiers' wives and dependants, while the Canadian people burn about $2,000,000 worth of property every month. Canada's annual fire waste is sufficient to pay 5 per cent. interest on nearly all our war loans and provide a sinking fund large enough to cancel the total indebtedness in thirty years. One year's fire loss in Canada would purchase 12,000,000 bushels of wheat for our allies. The value of grain and other agricultural produce burned in Canada in 1916 was equal to the average annual production of 1,500 hundred-acre forms. Canada's fire loss in 1916 would have provided 3,500 aeroplanes or 25,000 machine guns or maintained over 20,000 men in the trenches for a year.

Carelessness is responsible far the majority of the fires. Legislation will probably be introduced in due course so that carelessness in regard to fires will be a costly offence.

WAR AND UNREST

In his address at the annual meeting of the Canadian Bank of Commerce, Sir Edmund Walker made an opportune reference to the present social unrest. He pointed out that this is being experienced at a time when those in North America were never so easily able to obtain employment suited to their varied capacities, never so highly paid so far as those are concerned who aid in the production of goods for sale, and never so prosperous, using the word in a material sense. The price of everything, however, was almost never so high, and the purchasing power of the dollar has declined so much and so rapidly that people with a more or less fixed income suffer keenly, while those who earn more money than they could have conceived possible a few years ago, are disappointed and apparently surprised to find that everything else has advanced in price in proportion to their high wages. Out of this turmoil, he reminded us, has come a bitterness towards all who, by any stretch of fancy, can be held responsible for existing conditions, a bitterness often without any real basis, and which is accompanied by explosions of wrath directed at whatever happens to be the nearest object of criticism, but, if continued, and kept at fever heat as it has been of late, promises ill for our country after the war. It is untrue to say that Sir Edmund is defending capital and what are termed the big interests. Sir Edmund is a capable banker and a business man, with a thorough knowledge of conditions outside of banking and business and practical sympathy for the views of the so-called man in the street.

The problems of the social unrest require the serious consideration of capital, labor and government. Their solution cannot be obtained by a generally hostile attitude of the big interests to labor or by bitterness of labor towards capital. Effective results should be obtained by reasonable discussion of differences. Extremists in both camps are largely responsible for the wide gap between the two.

The conditions arising out of the war are at the bottom of most of our present troubles. As Sir Edmund pointed out, what is necessary is not only fair dealing on the part of those who supply the wants of the people, "but patience, and some remnant of belief in our fellow-men, on the part of those who feel the pinch and who, perhaps naturally, would like to punish somebody." If dealers have combined to put up prices, let them be punished, but apparently we are complaining because dealers, in buying from producers, did not combine to lower prices or to keep them down. The needs of the war are, however, so great that no combination can control prices either in one way or the other.

Sir Edmund also said: "If society by its laws should choose to limit the amount of wealth which any one may accumulate, let us wait until it has done so before passing judgment and when we undertake to express our opinion of the character of those who possess great wealth, let us judge them by the use they are making of it, by the extent to which they regard it as a trust which came to them only because they were in some things abler than their fellows, and as a means through which they may leave the world the better because of their existence. Many rich men do not come up to this standard, and by inheritance taxes we are gradually adjusting matters, but in North America there are so many instances of good service rendered to the state by wealthy citizens that one wonders if we should not be greatly the losers by any new condition which would hamper individuality and, in so doing, perhaps destroy the main factors which separate our twentieth century comfort from the miseries of the middle ages. In contending for a more rational consideration of the relations between the consumer and the producer, we have no intention of claiming that conditions are satisfactory, nor are we expressing an opinion regarding the relations of employers and employed, and certainly we hold no brief for either side. A great bank is vitally concerned with what will conduce to the true interest of the country, and that means the greatest amount of well-being on the part of its citizens."

We have referred only briefly to Sir Edmund's references to this important matter. They are printed in full elsewhere in this issue. His remarks were exceptionally thoughtful and fair and merit the widest possible circulation.

TRADE AFTER THE WAR

With comparatively little publicity, the United Kingdom is organizing a commercial intelligence system which eventually will prove of great value to manufacturers and traders there and to British Empire trade generally. Sir Albert Stanley, president of the Board of Trade, recently outlined the programme of the Board's extended activities toward increasing overseas commerce, including the dissemination of up-to-date information from all parts of the world. According to cable despatches, a new Department of Overseas Trade will control the Board of Trade's trade commissioner service within the Empire. It is intended to extend the trade commissioner service to India and some of the principal Crown colonies, and to greatly increase its commercial services.

Sir Albert Stanley described a new step in the distribution of information under the pledge of secrecy to traders and manufacturers regarding possible exporters in certain foreign countries of British manufactured goods. The idea is the outcome of the Trading-with-the-Enemy Act. Ten thousand traders have already availed themselves of its use. All whose bona fides are doubtful are checked, with the assistance of leading commercial organizations. Even more secret is the confidential register which provides for wider information regarding trade openings abroad, reports on foreign competitors, and various overseas industries.

Sir Arthur Steel-Maitland, M.P., who will represent in parliament the new Department of Overseas Trade (Development and Intelligence), speaking in London recently stated that it was now plain that before the war we were face to face with a commercial strategy on the part of the enemy just as real as the military strategy they are now employing to-day. "In many foreign countries," he said, "there is a perfect system of penetration by German finance and German industry, and the two are linked together in a way, if we do not wish literally to copy it—for no foreign country is anxious to rid itself of German penetration merely to substitute English—we intend to combat."

In the United Kingdom, in Canada, and in other parts of the Empire, trade intelligence organizations are being perfected. They will become a formidable opponent of enemy trade and will help to increase materially the sales of our Empire's merchandise throughout the world's markets.

PERSONAL NOTES

Mr. Herbert Hale Williams, of H. H. Williams & Company, real estate brokers, and president of the International Realty Company, was recently elected to the board of the Dominion Bank, to succeed the late Mr. W. R. Brock. Early in December Mr. Williams was elected to succeed Mr. Brock on the board of the Toronto General Trusts Corporation.

(British and Colonial Press Photo.)

H. H. WILLIAMS,

Elected Director of the Dominion Bank.

Mr. George Fisher has been elected a director of the Northern Crown Bank. He is a prominent citizen of Winnipeg, and has a reputation as a sound business man. Mr. Fisher is manager in Canada of the Scottish Co-operative Society, grain buyers. He is a past president of the Winnipeg Grain Exchange, and was recently elected an alderman for the city of Winnipeg.

(The Monetary Times Photo.)

GEORGE FISHER,

Elected Director of the Northern Crown Bank.

Mr. John Stovel, one of Winnipeg's best business men, has been elected vice-president of the Northern Crown Bank.

Mr. C. L. Sweeney, of Montreal, has been appointed branch manager at Montreal for the Manufacturers' Life Insurance Company.

Mr. Hugh Leach, formerly assistant general manager of the Bank of Toronto, but who retired twenty years ago on account of ill-health, died at his home recently.

Mr. T. B. Greening, president of the Pure Gold Manufacturing Company, and Mr. James Hardy, F.C.A., of Jenkins & Hardy, chartered accountants, have been appointed directors of the Standard Bank of Canada.

Mr. G. P. Awrey, who was formerly connected with the Crown Life and also with the Federal Life, has been appointed field secretary for Western Ontario for the Monarch Life Assurance Company, with headquarters at Toronto. Mr. Awrey has had field and head office experience, and should be a valuable asset to the Monarch Life.

Mr. Thomas A. Bradshaw, commissioner of finance and city treasurer of Toronto, has been appointed assistant to Sir Thomas White to obtain information, and advise with the minister as to the administration of the recent order-in-council relating to the issue and sale of securities in Canada. Mr. Bradshaw's services will be honorary, and without remuneration. He is one of the best qualified experts upon municipal securities and finance in Canada, and his appointment will receive widespread approval.

Mr. H. Milton Martin, Edmonton, Alta., who was chairman of District No. 4 Northern Alberta Committee, Victory Loan campaign, is a true westerner, having been 31 years in Western Canada, for the past 11 years in Edmonton and previously in Vancouver and the Yukon. He is chairman of the Edmonton committee, Western Canada Fire Underwriters' Association, and an ex-president of the Edmonton board of trade, and the Canadian Club. He is chairman of the civic interests committee of the board of trade, also chairman of the relief committee, Northern Alberta Branch, Canadian Patriotic Fund. Mr. Martin is consul in Edmonton for Belgium.

QUANTITY AND ESTIMATED VALUE OF LUMBER

The following table shows Canada's lumber production by provinces for the two latest years for which official figures are available:—

1915.

	Quantity 1,000 ft. B.M.	Value.	Value per 1,000 ft. B.M.
Ontario	1,035,341	$19,663,950	$18.99
British Columbia	699,816	8,414,227	12.56
Quebec	1,078,787	17,784,415	16.49
New Brunswick	633.518	9.902,202	15.63
Nova Scotia	294,475	4,366,165	14.83
Saskatchewan	62,864	880,353	14.00
Manitoba	42,357	549,436	12.97
Alberta	17,975	244,487	13.60
Prince Edward Island	7,543	114,577	15.19
	3,842,676	$61,919,812	*$16.11

1916.

	Quantity 1,000 ft. B.M.	Value.	Value per 1,000 ft. B.M.
Ontario	894,050	$17,845,238	$19.96
British Columbia	875,937	12,928,830	14.76
Quebec	818.523	13,726,630	16.72
New Brunswick	513,655	8,382,849	16.32
Nova Scotia	220,718	3,054.737	13.84
Saskatchewan	84,275	1,191,648	14.14
Manitoba	57,711	850,660	14.74
Alberta	18,350	262,405	14.30
Prince Edward Island	7,331	118,175	16.12
	3,490,550	$58,361,172	*$16.74

DECEMBER FIRE LOSSES

Halifax Disaster Makes Big Total—Many Large Fires Reported

The Monetary Times' estimate of Canada's fire loss during December, 1917, is $5,144,100, as compared with the November loss of $959,049 and $3,271,496 for December of 1916. The following is the estimate of the December losses last year:—

Fires exceeding $10,000	$4,654,000
Small fires reported	80,000
Estimates for fires unreported (15 per cent. on total, exclusive of Halifax disaster)	410,100
	$5,144,100

The Monetary Times' record of the past four years shows the following monthly losses:—

	1914.	1915.	1916.	1917.
January	$ 2,796,312	$ 1,249,886	$ 1,649,217	$ 1,918,660
February	2,920,749	1,019,556	3,275,600	2,009,953
March	2,660,666	1,632,696	1,406,501	2,050,650
April	1,916,235	1,463,747	1,460,437	1,317,714
May	1,935,516	881,855	1,850,205	1,163,110
June	1,267,416	1,157,156	494,557	1,184,627
July	2,033,139	773,269	3,039,634	1,101,734
August	2,921,379	403,693	1,057,109	1,230,183
September ..	1,356,281	1,116,109	981,703	1,301,700
October	1,326,565	1,290,325	1,077,815	704,605
November ...	1,524,932	1,087,980	923,235	959,049
December ...	1,661,822	1,595,255	3,271,496	5,144,100
Totals ..	$24,321,012	$13,671,527	$20,487,509	$20,086,085

The fires reported in December at which the losses amount to $10,000 and over were:—

Bathurst, N.B, November 28, John H. Dun, hospital, $20,000.

Fort William, Ont., November 27, stock and fixtures of Chapples, Limited, $13,500.

Halifax, N.S., December 6, large part of city, $2,000,000.

Toronto, Ont., December 6, Polsons Iron Works, $300,000.

Toronto, Ont., December 10, Canadian Auto Sales Company, $17,000.

Wallaceburg, Ont., December 10, Dominion Sugar Company, $100,000.

December .	19	17	28	13	19	11	94	15
Totals	256	317	203	236	175	142	531	207

In *The Monetary Times* of December 28th, page 14, under the heading "Adjustment of Halifax Fire Losses," it was stated that the adjustment is left in the hands of three men who will adjust for all the companies interested. An insurance company writes: "This statement is entirely incorrect. The work of the committee is to apportion losses to the adjusters and not to adjust them. Every company can appoint its own adjuster. As far as our three companies go, and they are very heavily involved, these adjusters will not act for us. Moreover, these adjusters were not appointed by the Halifax committee; they were appointed by various companies interested, and there is no obligation on any company to employ them."

The United States entered the new year with a national debt of $5,615,000,000, more than five times greater than when it entered the war nine months ago, but only one-third of the debt which promises to develop by the first of next year. The debt per capita is about $51, and the percentage of debt to estimated national wealth is 2½ per cent.

ONTARIO GOVERNMENT'S FISH MARKETING

The policy adopted by the Ontario government during the past year of placing on the Ontario markets, virtually at cost, supplies of native fish, thus assisting both to reduce living costs to consumers and to conserve meat supplies for the benefit of Great Britain and her Allies, is to be further developed with assurance of a more abundant general supply, through the attachment of conditions of fishing licenses now being issued for the current year. These conditions merely require the fishermen, if called upon, to furnish to the government a proportion of their catch, not exceeding 20 per cent., at prices not to exceed eight cents per pound for whitefish, trout and pickerel, dore, six cents for herring, pike and similar coarse fish, and nine cents for catfish skinned and dressed. All such fish commandeered in the public interest are to be delivered, boxed and iced, dressed if required and the price to be f.o.b. at the point of shipment.

BANK OF TORONTO

With the well-deserved reputation of an enterprising and properly conservative financial institution, the directors of the Bank of Toronto this week presented an exceptionally strong financial statement at the sixty-second annual meeting of the bank. An examination of the balance sheet shows immediately available assets of $37,938,500, consisting of cash, bank balances, negotiable securities and call loans, equal to over 52 per cent. of the amount owing the public. a gratifying position. The negotiable securities total $17,265,152. This is an increase for the year of $9,092,722, reported chiefly by additional investments in Canadian and British war issues. The cash and gold reserves total $12,582,352, an increase of $2,162,116 for the year. The total assets are $84,293,918, an increase of $11,179,364, equal to more than 15 per cent. over the previous year, a splendid record.

The bank's loans at the end of the fiscal year exceeded $42,000,000, a large sum which reflects the assistance given by the bank to Canadian business. Deposits total $63,907,000, an increase of 16.42 per cent. for the year. Notes in circulation total $7,606,005, a gain of $1,906,872, or 33.63 per cent. The bank has $2,500,000 deposited in the Central Gold Reserves, and $262,273 deposited with the minister of finance as protection to its note issues.

The profits for the past year were $802,920, an increase of $71,966 over the previous year, from which were paid war tax on circulation $49,403, patriotic fund and other subscriptions of $31,200 were made, and the usual contribution of $25,000 to the officers' pension fund. A dividend of 11 per cent. was paid to the stockholders.

The bank's rest and reserved profits total $6,555,306, which with the paid-up capital of $5,000,000 makes the substantial reserve of $11,555,306.

Mr. W. G. Gooderham, president of the bank, gave at the annual meeting his usual instructive annual review of Canadian conditions. Mr. T. F. Howe, general manager, reviewed the progress of the bank and also delivered the following timely warning:—"It is necessary not to be carried away, either in times of prosperity or in times of depression. The country is at present enjoying prosperity, but it is, nevertheless, a time for more than usual caution. Manufacturers, merchants and farmers have been carrying on business on a rising market for their products. This condition has assisted profits for the time being, but as the war is prolonged difficulties will increase. Already there is a scarcity of labor—at least labor of the right class—and of raw materials and food supplies. Prices have reached very high levels, and will probably continue to rise. When the war at last comes to an end and government expenditure for war purposes is reduced to a minimum, there will be a swift reversal of the conditions of the past two years. As the war is the greatest the world has ever known, so will the aftermath be the most far-reaching. It will therefore be the part of wisdom for all classes to conserve their gains and place themselves in a position to meet the period of readjustment."

Officials of the municipalities enjoying hydro-electric service throughout Ontario are to meet in Toronto on Tuesday next for conference with Sir Adam Beck and other officials of the Hydro Commission as to the power shortage and the recent order having for its object the further conservation of power required in the production of munitions.

IS NOW SIR FRANK BAILLIE.

Mr. Frank Baillie, Toronto, has been honored by the king and made a Knight Commander of the new British Empire order. Sir Frank Baillie, for the decoration of Knight Commander of the British Empire carries with it that prefix, has been active in war work since 1914. He is president of the Canadian Aeroplanes, Limited, and a director of the Aviation Department of the Imperial Munitions Board. Born in Toronto on August 9, 1875, Sir Frank commenced his business career as clerk and private secretary to the late Senator Cox. He was later secretary of the Central Canada Loan and Savings Company; subsequently general manager of the Metropolitan Bank, Toronto. In 1903 he formed the brokerage firm of Baillie, Wood and Croft, and in 1912 he organized the Bankers' Bond Company, Limited. He also organized about the same time the Burlington Steel Company, Limited, and the Dominion Steel Foundry, Limited. At the commencement of war Sir Frank formed the Canadian Cartridge Company to manufacture brass cartridge cases for the British government. In July, 1916, he turned over to the government $758,248, profits from the manufacture of munitions.

Sir Frank Baillie is the first Torontonian to receive the Knighthood of the Order of the British Empire, and the second Canadian, as Sir Charles Gordon, of Montreal, was the first, to receive the decoration. The order of the British Empire was instituted in June last. It consists of five classes and is awarded to both men and women for services rendered to the Empire. The first two classes for men are Knight Grand Cross (G.B.E.) and Knights Commanders (K.B.E.) Both these classes are entitled to prefix to their names "Sir."

CANADIAN BANK OF COMMERCE

Second only among the Canadian banks in the matter of total assets, the Canadian Bank of Commerce is high also in the list of the world's great banks. It holds first place in Canada in regard to current loans and discounts in the Dominion, an indication of the important part played by the bank in providing the financial requirements of our mercantile community and of carrying on the daily business of Canada. In his address at the annual meeting of the bank this week, Sir John Aird, general manager, pointed out that in 1912 the current loans and discounts in Canada of the bank were three times as great as those of all the Canadian banks in the year in which the Canadian Bank of Commerce was founded. It was hoped to announce this year the increase of the rest to an amount equal to the paid-up capital of the bank. This would have been accomplished had it not been for the war.

An idea of the vast business carried on by the Canadian Bank of Commerce is gathered from the statement of the general manager that the total turnover of the institution during the past year was $20,000,000,000. The banks lost a large percentage of their trained staffs under the voluntary enlistment system, and the problem of carrying on the large amount of banking business, much of it of great national importance, has become more difficult. The deposits of the Canadian Bank of Commerce have reached the large total of $276,000,000, an increase during the year of $46,529,000. When it is recalled that not until 1901, thirty-four years after the bank's establishment, did the total deposits equal the amount of this increase, and then only after the taking over of the Bank of British Columbia, the extent of the increase and of the difference in scale in Canadian affairs will be better understood.

The profits of the bank last year, which marked its semicentennial anniversary, amounted to $2,637,555, an increase of $198,000 over the figures of the previous year, but an increase not at all commensurate with the additional business transacted or the additional responsibility involved. Large advances have been made from time to time to both the Dominion and the Imperial governments, and these naturally bear low rates of interest. This is considered by the bank as part of their contribution to the cost of the war.

The payment of the usual dividend of 10 per cent. per annum was continued, with a bonus of 1 per cent. at the end of each half-year. The war tax on note circulation last year reached its maximum, and after providing for these items, the bank carried forward the large sum of $1,332,000 at the credit of profit and loss account. The financial statement for the past year was one of the strongest ever presented by the bank.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Canadian Car and Foundry Company.—The company's plant at Kingsland, N.J., has been sold to a chemical concern, which will establish a factory for general manufacture of commercial chemicals. The property consists of 85 acres of land.

Civic Investment and Industrial Company.—The net earnings for the month of November were $520,863. After charges there was available for dividend $437,974, and after dividends were paid there was a surplus of $224,932, compared with $199,316 in October.

Kaministiquia Power Company.—The company's capital stock has been placed on an 8 per cent. per annum dividend basis. The rate since the summer of 1916 had been 7 per cent. This is the second dividend increase since the war started, and prior to that there had been a progressive advance in dividend from year to year since the first declaration of ¾ of 1 per cent. in the first quarter of 1910.

Dominion Glass Company.—The earnings for the fiscal year ended September 30th amounted to $487,000 in round figures, as compared with $454,328 for 1916. Last year an amount of $50,000 was deducted for sinking fund and $182,000 for preferred dividends, while bond interest took $120,000. This would leave a balance of well over $100,000, and the statement was made this morning that surplus account now stands at $725,000.

H. Rogers Company.—By creating 6,000 additional preference shares of $100 each, the company's capital stock will be increased from 2,400,000 to $3,000,000. The new stock will carry a cumulative dividend of 7 per cent, and will be used to acquire the business of Simeon and Geo. H. Rogers Company, of Hartford, Conn., which enterprise is to receive $222,800 of the company's preferred stock for its business and assets. The balance of the increase of $600,000 will not be issued at present.

Imperial Oil Company, Limited.—The incorporation of the Imperial Oil Company, Limited, with a capital stock of $50,000,000, will be followed by the distribution of stock in the new company to shareholders. The new stock will be most likely distributed on a share-for-share basis. The company will take over the business of refining and marketing petroleum now carried on in Canada and Newfoundland, and the charter also gives it the right to operate live stock ranches and to deal in agricultural products.

This new move follows the issuance of 50,000 shares of its stock at par in the ratio of one share for every five shares held by the shareholders. The company is the Standard Oil organization in Canada. It has grown rapidly in the last few years, and now operates a series of refineries reaching across the Dominion. The recent stock issue and the incorporation are the result of expansion in its business.

Coniagas Mining Company.—The output of the property of the company was placed at 1,344,267 ounces for the year ended October 31st, 1917, which is a marked decline from the preceding twelve months. Higher operating costs was another unfavorable factor encountered during the year. The enhanced price of silver tended to counteract the other influences, and the net returns were quite close to those of 1916.

The total revenue for the year was $1,065,745, comparing with $1,192,424 in 1916. A balance of $773,905 was left after operating and administration costs was deducted. After allowing for depreciation, etc., there remained $641,334 to the credit of the profit and loss account. The deduction of two dividends aggregating $300,000 and the addition of last year's balance brought the current balance up to $1,668,360, against $1,363,460 last year.

Little addition has been made to the ore reserves during the year, justifying the company's policy in securing the Ankerite gold property, prospects of which are believed to be encouraging.

Brompton Pulp and Paper Company, Limited.—In the company's first annual report the earnings for the year ended October 31st last are $1,073,562. The figures are given after the deduction of an unstated amount for the business profits war tax provision, for which is included in an item of $233,263 among current liabilities, the item representing pay roll and other charges accrued, as well as the reserve for the tax.

After deducting $176,670 for depreciation, $87,066 for bond interest and $140,000 for preferred stock dividend, there was a net surplus of $669,826 available for the common stock, an amount equal to 9.6 per cent. earned on the $7,000,000 issue. It was found that after distributing 5 per cent. to shareholders for the year, a surplus of $319,825 was carried forward to surplus account. Current liabilities to the public amount to only $366,678, including $133,415 in accounts payable and $233,263 in pay roll, war tax, reserve, etc. With $35,000 in preferred dividend and $87,500 in common dividend, payable after the close of the company's year, the total current liabilities footed up $489,178. Against that the company had $556,169 in accounts receivable, $363,471 in cash and $1,289,293 in inventories, a total of $2,208,934. The net working capital was, therefore, $1,719,756. Cash and receivables by themselves are aapproximtely double the total of current liabilities.

The statement of assets and liabilities shows the following:—

Assets.—Property, plant, etc., $8,896,544; inventories, $1,289,293; accounts receivable, $556,169; cash, $363,471; investments, $149,277; deferred charges, $78,247; total, $11,333,004.

Liabilities.—Preferred stock, $2,000,000; common stock, $7,000,000; bonds, $1,524,000; accounts payable, $133,415; pay roll, tax, etc., $233,263; dividends payable, $122,500; profit and loss, $319,825; total, $11,333,004.

MOOSE JAW'S DEBT AND TAX LEVY

Regarding the annual report for 1916 of the department of municipal affairs for Saskatchewan, extracts from which were reprinted in *The Monetary Times* of December 28th last, Mr. George D. Mackie, city commissioner, Moose Jaw, writes, stating there are inaccuracies in the table of assessment and tax levies of the cities, as published in the provincial department's report. He says:—

"In 1916 the quinquennial federal census was taken in the prairie provinces, and in furnishing the statistics to the minister of municipal affairs for the year 1916, Moose Jaw gave as its population the federal census return as then published, but the other cities evidently furnished figures of the population which, in most cases, were in excess of the census returns, and when these inaccurate figures are used as a basis of arriving at the per capita debt and tax levy they naturally place Moose Jaw in an unfavorable light compared with other cities.

"The population of the three largest cities as per the census returns and these cities' own estimates are:—

	Estimated population, 1916.	Census figures, 1916.
Regina	40,000	26,127
Saskatoon	35,000	21,048
Moose Jaw	16,889	16,934

"Regarding the tax levies, I find from the financial statement for 1916 of the city of Regina that their total levy was $1,338,184, and not $1,143,471, and in the case of Saskatoon, the levy, as shown in the city commissioner's report, is $859,446, to which, however, should be added the sum of $22,407 in respect to business licenses, making a total levy of $881,853. In the cases of Regina and Moose Jaw, the levy in respect to business is included in the tax levy.

"Taking these figures as a basis, the tax levy and debenture debt per capita for 1916 is found to be:—

	Population.	Debenture debt per capita.	Tax levy per capita.
Regina	26,127	$404	$51.21
Saskatoon	21,048	389	41.89
Moose Jaw	16,934	314	51.24

SECURITIES ISSUES REGULATION

Order Stands as Drafted—Abundant Reason for Enactment—Quebec Enters Protest

Late last week it was stated that an order slightly amending the recent enactment in regard to bond issues was under consideration by the government, and was before the justice department. While the principle of control by the minister of finance of all security issues was adhered to, it was stated that authority might be given the minister to define certain classes of bonds in respect to which his consent might be waived.

On Monday, Sir Thomas White, finance minister, declared there was no authority for the above report. Approval of all new issues, therefore, will have to be obtained at Ottawa.

Forms to be Used.

The forms to be issued by the finance minister are simple. There is an application blank and a certificate of approval blank. The application is addressed to the minister of finance. It contains the name and address of the applicant; space for a description of the securities sought to be issued, showing their amount and par value, rate of interest and date or dates of maturity; space for a statement of the purposes for which the proceeds of the securities are to be used and a line for the signature of the applicant, which in the case of a corporation includes the signatures of the proper officers and the seal of the corporation.

The certificate of approval states that "approval is hereby given, under the provision of Order-in-Council (3439), dated the 22nd day of December, 1917, to the issue, offering and sale within Canada of ...." and then follows a description of the issue. The certificate has space for the date and the signature of the minister of finance.

Quebec's Protest.

Last week, an order-in-council appeared in the Quebec official Gazette, in which the executive council of the province protested against the order-in-council and informed the government of Canada that it is the intention of the Quebec government to consider the regulations as illegal, unconstitutional and in no wise binding on the province of Quebec.

Mr. S. P. Grosch, chairman of the provincial local government board has given tacit assent to the measure by suggesting that the body over which he presides might be appointed an advisory committee for Saskatchewan.

The question of classifying companies so as to exempt small mining and other concerns from the necessity of securing certificates at Ottawa has been considered, but this may not be done.

The purpose of the order is to conserve money for future Federal war loans and also to protect existing bonds. It is estimated that about $50,000,000 of provincial and municipal flotations are contemplated this year

Bond Sales Last Year.

According to the bond records of Mr. E. R. Wood, of the Dominion Securities Corporation, Toronto, the sales of Canadian securities in 1917 were larger than ever before, Dominion government issues naturally predominating. The following is Mr. Wood's record of bond sales:—

Securities.	Total sold.	In Canada.	In United States.	In Great Britain.
Government	$693,420,279	$551,180,279	$142,240,000	....
Municipal	25,219,103	19,387,738	5,831,365	....
Railway ..	22,566,666	200,000	17,500,000	$4,866,666
Public service Corporation	15,425,000	1,825,000	13,600,000	....
Miscellaneous	16,110,800	8,370,800	7,740,000	....
Total ...	$772,741,848	$580,963,817	$186,911,365	$4,866,666

Big Tasks Ahead.

Commenting on these figures, Sir Edmund Walker said this week: "That 580 millions of securities could be placed in Canada in one year, in addition to the aid given by the banks to the manufacture of munitions, is very surprising, but we must remember that it was still necessary to obtain 190 millions from outside during the year and that not only are these avenues now completely closed, but if we hope to continue the making of all kinds of war products as actively as heretofore, we must find at home much larger sums in 1918 than in 1917 for investment in war securities. Even if the sale of the relative securities were possible, all expenditures, except for the war, must be restrained, and this is abundant reason for the recent order-in-council under which new issues in Canada of the securities of any province, colonial or foreign government, municipality, corporation or incorporated company, may be sold only with the approval of the minister of finance."

BRITAIN'S VAST WAR CREDITS

To December Last, They Totalled £6,242,000,000—Record of the Credits

Up to December, 1917, Great Britain had voted war credits of £6,242,000,000 as follows:—

No.	Date of Treasury Notice.	Amount. £	Total for each Fiscal Year. £
	1914-15—		
1.	August 5, 1914	100,000,000	
2.	November 12, 1914	225,000,000	
3.	February 25, 1915	37,000,000	
			362,000,000
	1915-16—		
4.	February 25, 1915	250,000,000	
5.	July 10, 1915	250,000,000	
6.	July 19, 1915	150,000,000	
7.	September 14, 1915	250,000,000	
8.	November 9, 1915	400,000,000	
9.	February 17, 1916	120,000,000	
			1,420,000,000
	1916-17—		
10.	February 17, 1916	300,000,000

			2,450,000,000
	Total		£6,242,000,000

Average Daily Expenditure.

In moving a vote of credit of £550,000,000 in December, Right Hon. A. Bonar Law, Chancellor of the Exchequer, estimated that the vote would carry the expenditure to the end of March, 1918. He declared that the average daily expenditure in the previous sixty-three days was £6,794,000, and for the period since the end of the last financial year £6,686,000. The total excess expenditure over the budget estimate, the chancellor said, was £309,000,000.

From the beginning of the financial year to September 29th, 1917, the daily average expenditure was £6,648,000, an increase of £1,237,000 over the Budget estimate. The increase was made up under the following heads:—Army and navy, £590,000; miscellaneous services, £306,000; advances to the allies and Dominions, £341,000.

On September 29th the national debt stood at £5,000,000,000. But from this sum the government are entitled to deduct the amount advanced to the allies and the Dominions. This sum in the case of the allies was £1,100,000,000, and in the case of the Dominions £160,000,000. The government are also entitled to deduct part of the gift of the government of India to the Empire for the war. The gift amounted to £100,000,000, but of that amount about like £34,000,000 had been treated as revenue. The Indian government, however, had taken the responsibility for the balance. The total to be deducted therefore is £1,326,000,000.

Sir Frederick Williams-Taylor, general manager of the Bank of Montreal, has received an official cable from the British secretary of war notifying him that his son, Lieutenant Williams-Taylor, is a prisoner of war in Turkey.

You May Banish Anxiety About Your War Bonds

War Bonds unless registered cannot be reinstated if once lost or destroyed without considerable trouble and inconvenience. Keep them in one of our Safety Deposit Boxes. Our All-Steel Safety Vaults are the final achievement in fire-proof and burglar-proof construction. A Private Box is always accessible to the holder during business hours, and costs only $3.00 per year and upwards, according to size. Visitors would be interested to see the various devices for insuring safety, as well as the attractive accommodations, where box holders can inspect their papers in privacy.

Will Making

THE average human being is very much averse to making a Will; and yet it is absolutely necessary that it be done, if we would dispose of our Estate as we would wish, instead of leaving it to the disposition of the Law.

The making of a Will TODAY will not accelerate death a single instant, but rather tend to make us satisfied with an act timely and properly done.

The Corporate Executor is the only ideal Executor. Consult with us as to the making of your Will. Will Forms Free.

November Bank Statement Makes New Records

Savings Deposits at $1,008,000,000 is Highest Total to Date and Represents an Increase of 60% in Four Years—Note Circulation at $196,000,000 Was a New High Total—Current Loans Declined in November But at $868,000,000 Are Still Larger Than in Any Past November—Call Loans Abroad Reduced.

	November, 1916.	October, 1917.	November, 1917.	Year's Inc. or dec.	Month's Inc. or dec.
Deposits on demand	$459,277,454	$495,058,449	$1,538,869,362	+ 17.2	+ 8.6
Deposits after notice	836,593,269	985,790,850	1,008,657,874	+ 20.6	+ 2.3
Current loans in Canada	813,791,947	883,986,860	868,973,714	+ 9.2	— 1.7
Current loans elsewhere	76,087,370	93,821,865	95,954,524	+ 25.0	+ 2.1
Loans to municipalities	32,945,963	41,204,381	36,459,598	+ 12.5	— 12.2
Call loans in Canada	89,395,370	71,653,719	72,178,345	— 19.1	+ 1.4
Call loans elsewhere	183,250,389	151,018,747	139,832,552	— 24.0	— 7.8
Circulation	148,197,971	195,298,212	202,181,328	+ 36.5	+ 3.5

THE above are the changes in the principal accounts of the chartered banks during November. For the first time on record, savings deposits exceeded a billion dollars, the exact figures being $1,008,000,000. For the first time also, the combined total of demand and notice deposits exceeded $1,500,000,000. Total deposits increased over $66,000,000 in November following an increase of $63,000,000 in October and $27,000,000 in September. As during the past few years a certain amount of demand deposits has been transferred to savings account, it is not correct to describe this large total of $1,008,000,000, as savings. To a large extent, however, that is what the figures represent. In June, the savings deposits stood at $900,000,000. In the past year, there has been an increase of over 20 per cent. in the total.

The growth in demand, usually non-interest-bearing, deposits in the past two months has been substantial, a gain of about 43 millions in October being duplicated in November. In the former month the gain reflected in part the increase in the current loan account, which was $28,000,000 higher for the month. Current loans, however, contracted about $15,000,000 in November. The Victory Loan campaign may have been a factor in this instance, as there was probably some money deposited and ear-marked for loan subscriptions, and which went into current rather than into savings accounts.

Note circulation of the banks made a new high record at $196,000,000, which stood at the end of November against $189,000,000 in October, and against a paid-up capital of about $113,000,000. To provide for the excess issue, the banks' deposits in the Central Gold Reserve were enlarged upwards of $10,000,000 to $91,000,000.

The following table gives a record of deposits for the past 13 months:—

	Deposits payable on demand.	Deposits payable after notice.
1916—November	$459,277,454	$836,593,269
December	458,208,417	845,006,717
1917—January	427,308,526	864,163,344
February	430,331,801	880.456,637
March	448,151,528	888,765,698
April	471,312,285	874,948,724
May	443,839,847	892,562,657
June	449,689,670	900,510,552
July	450,849,356	929,442,340
August	443,317,275	806,774,687
September	451,749,532	965,393,541
October	495,058,449	985,790,850
November	538,869,362	1,008,657,874

The following table shows the record of savings for the past four years:—

November.	On demand.	After notice.	Total.
1913	$384,486,046	$ 625,803,150	$1,012,640,075
1914	350,884,153	625,994,852	976,879,005
1915	406,735,171	714,219,286	1,120,954,457
1916	459,277,454	836,593,269	1,295,870,723
1917	538,869,362	1,008,657,874	1,547,527,236

In four years, the increase in demand deposits has been $154,000,000 or 40 per cent. and in notice deposits, $383,000,000 or 61 per cent. The increase in total deposits in the same period was $535,000,000 or 52 per cent.

The following table shows the course of current and call loans in Canada during the past thirteen months:—

Loans.	Current in Canada.	Call in Canada.
1916—November	$813,791,947	$89,395,370
December	820,378,557	82,569,983
1917—January	806,479,147	79,737,064
February	813,302,717	78,686,535
March	843,054,466	76,478,708
April	880,523,897	82,737,417
May	844,890,589	78,514,798
June	839,355,782	76,085,220
July	829,560,700	71,376,788
August	836,429,670	71,204,351
September	855,306,953	72,421,187
October	883,986,860	71,653,719
November	868,973,714	72,178,345

Current loans were at their highest point in October, but in November showed a sharp contraction of $15,000,000. The decrease in this account probably reflects the rapid payment for grain and other Canadian goods shipped abroad in the month. With the increase in savings deposits it is a complement to the foreign trade return for the month, which showed a record-breaking volume of exports. As the autumn rise in current loans last year continued through November, the easier position at the end of last month is a satisfactory change.

The following table gives a record of the loan accounts during the past four years:—

November.	Current loans in Canada.	Current loans elsewhere.	Call loans in Canada.	Call loans elsewhere.
1913	$830,715,015	$55,819,280	$70,123,101	$122,380,863
1914	794,269,220	42,966,275	69,394,407	74,459,649
1915	777,162,563	55,240,955	83,203,787	135,530,562
1916	813,791,947	76,087,370	89,395,370	183,250,389
1917	868,973,714	95,954,524	72,178,345	139,832,552

While current loans in November were less than in the previous month, they were still $38,000,000 higher than in any November of the past five. Current loans abroad in November last were $40,000,000 higher than in November, 1913. Call loans in Canada were less than a year ago, as also call loans abroad. Cash holdings of the banks, both coin and Dominion notes, made a gain during November, partly in preparation for annual statements made by a number of the banks which close their year on November 30th. There was also a reduction of $11,000,000 in call loans abroad, following a reduction of $15,000,000 in October and $11,000,000 in September.

The course of call loans abroad for the period beginning two months before the declaration of war is of interest and is shown in the following table:—

	1914.	1915.	1916.	1917.
January	....	$ 85,796,641	$134,248,552	$155,747,476
February	....	89,890,982	139,138,651	162,344,556
March	....	101,938,685	141,889,989	161,616,735
April	....	121,522,971	147,146,443	159,156,054
May	....	136,098,835	163,400,659	168,692,675
June	$137,120,167	124,604,875	182,757,015	159,309,133
July	125,545,287	117,821,174	177,121,733	151,875,676
August	96,495,473	120,607,677	171,380,353	176,610,625
September	89,521,859	135,108,412	173,877,586	166,480,004
October	81,201,671	120,681,624	189,346,216	151,018,747
November	74,459,643	135,530,562	183,250,389	139,832,552
December	85,012,964	137,157,869	173,878,134	....

The Hamilton Provident and Loan Society

DIVIDEND No. 93

Notice is hereby given that a Dividend at the rate of Eight per cent. per annum has been declared for the half year ending December 31st, 1917, upon the paid-up Capital Stock of the Society, and that the same will be payable at the Society's Head Office, Hamilton, Ontario, on and after Wednesday, the 2nd day of January, 1918.

The Transfer Books will be closed from the 15th to the 31st of December, both days inclusive.

By order of the Board.
D. M. CAMERON, Treasurer.
Hamilton, November 24th, 1917.

"INVESTMENTS"

A MUCH MISUSED TERM

Many who should be, and think they are laying up money for their old age, are misled into so-called "investments," where their hard-earned money is jeopardized, and frequently lost, though it is of the utmost importance to them and to those who may be dependent upon them that its absolute safety should be beyond peradventure.

To those who should invest safely and with caution, not speculate, the bonds of the Canada Permanent Mortgage Corporation can be confidently recommended. This Corporation is most conservative in the investment of the funds entrusted to it. For more than sixty years it has held a leading position among Canada's financial institutions, and its bonds are a LEGAL INVESTMENT FOR TRUST FUNDS. They are issued for one hundred dollars and upwards. Write for full particulars.

Of the deposit in Central Gold Reserves $19.430,000 is in gold coin; the balance is in Dominion Notes.

LARGE OUTPUT OF CANADA'S MINERALS

The Department of Mines estimates the production of metals from Canadian ores in 1917 as follows:—

Gold, $17,000,000; silver, 23,500,000 ounces; copper, 113,000,000 pounds; nickel, 84,800,000 pounds; lead, 56,000,000 pounds; zinc, $31,000,000.

The production of pig-iron was about 1,106,000 short tons, and steel ingots and direct steel castings 1,735,000 short tons. The production of coal was about 14,100,000 short tons. The production of gold, silver, copper and coal was less than in 1916. The production of nickel, lead, zinc, pig-iron and steel was greater than during the previous year.

Higher prices received for silver, coal and other products considerably enhanced the total value of the mineral production. It is estimated to have been not less than $200,000,000, as compared with $177,201,534 in 1916.

TORONTO AND HAMILTON HIGHWAY BONDS

A block of the Toronto and Hamilton Highway Commission's 6 per cent. gold bonds is being offered at 99.50 by the Dominion Securities Corporation, Toronto. The principal and interest are guaranteed by the endorsation of the province of Ontario. This investment is legal for estate and trust funds in Ontario, and is made particularly desirable for such requirements by reason of being free from all provincial taxes and succession duty. The highway is now completed and the entire bonded indebtedness outstanding.

Dominion Government---Nov., 1917

LIABILITIES

Loans from other banks in Canada secured, including bills re-discounted	Deposits made by and balances due to other banks in Canada	Due to banks and banking correspondents in the United Kingdom	Due to banks and banking correspondents elsewhere than in Canada or the U.K.	Bills payable	Acceptances under letters of credit	Liabilities not included under foregoing heads	Balances due to the Imperial Government	Total Liabilities	Aggregate amount of loans to directors, and firms of which they are partners	Average amount of current gold and subsidiary coin held during the month	Average amount of Dominion Notes held during the month	Greatest amount of notes in circulation at any time during the month

T. C. BOVILLE, *Deputy Minister of Finance.*

EXPORT OF CANADIAN METALS TO BE LICENSED

The government has decided for the present and until further notice to permit under license the free export of the metals molybdenum and tungsten, their ores, concentrates, alloys and chemical salts to approved consignees in the United States and France. This will relieve the situation that has been considered somewhat oppressive to Canadian producers.

Since an embargo was placed on the export of these metals the market for the Canadian production has been confined very largely to purchases made on account of the British government at fixed prices. These fixed prices have been lower, at times considerably lower, than the open market prices offered in the United States and France.

The requirements of the British government are being met and Canadian producers will now be permitted to take full advantage of the open markets in the United States and France. It will be necessary for the exporter, previous to shipment, to obtain from the commissioner of customs at Ottawa a license to export, and in the case of exports to the United States, it will be necessary, under the United States regulations, for the shipper or the consignee to obtain from the Bureau of Imports War Trade Board, Bond Building, Washington, a license permitting the importation of the shipment into the United States.

The Alberta government states that in the interests of farmers themselves the present is not an opportune time to commence the loaning of money under the Farm Loans Act, and it has been decided to postpone its operation until conditions become normal.

The Canadian Bank of Commerce

Report of the Proceedings of the Annual Meeting of Shareholders

TUESDAY, 8th JANUARY, 1918

The Fifty-First Annual Meeting of the Shareholders of the Canadian Bank of Commerce was held in the Banking House at Toronto, Tuesday, January 8th, 1918.

The President, Sir Edmund Walker, having taken the chair, Mr. A. St. L. Trigge was appointed to act as Secretary, and Messrs. W. S. Hodgens and E. M. Saunders were appointed scrutineers.

Before moving the adoption of the Report, the President called on the General Manager to address the Shareholders.

GENERAL MANAGER'S ADDRESS.

We are crossing the meridian into the second half-century of the Bank's existence and, pausing to look back, we may feel satisfaction in what has been accomplished in a comparatively short period of time. While we hold second place only among the Canadian banks in the matter of "Total Assets," we may point to our premier position as regards "Current Loans and Discounts in Canada" as an indication of the importance of the share taken by this Bank in the task of providing for the financial requirements of the mercantile community, and of carrying on the daily business of the country. In this connection it is interesting to note that by the year 1912 the current loans and discounts in Canada of this Bank were three times as great as those of all the Canadian banks in the year in which it was founded. We had hoped on this anniversary to announce the increase of the Rest to an amount equal to the paid-up capital of the Bank, and this doubtless would have been accomplished had it not been for the war. We have deemed it wise to follow a specially cautious and conservative policy and to provide during the war even more thoroughly than usual for any element of doubt in the loans and securities of the Bank. The increasingly keen competition in business has resulted in the banks being called upon to perform far greater services for smaller remuneration, so that the increase in the volume of their business is out of proportion to the increase in their profits. Naturally an increased volume of business means a corresponding increase in the provision to be made for doubtful items, while the profits do not provide in a corresponding measure for the relative appropriations. Whenever there is offered a new issue of government securities yielding a higher rate of interest, the market for existing securities is depressed to a corresponding extent and this entails a writing down of all securities on hand. Doubtless when the war is over this downward movement will cease and securities will tend to appreciate in value, so that much of this may be recovered.

Half Century Mark.

To mark the semi-centennial anniversary of the founding of the Bank it is our intention to publish its history. In the course of a comparatively short career it has taken over several much older institutions, which were among the pioneers of Canadian banking in their respective districts. For this reason in more than one province its roots go back to the beginning of banking in this country and the task calls for more research than would at first appear to be involved. In addition we have in course of preparation a new series of bank-notes, which are, we believe, in originality and beauty of design, a marked advance over those at present in circulation. We have had the designs copyrighted in Canada, the United Kingdom and the United States, and they will be our own exclusive property. The work of engraving the plates is a slow and tedious process and some of the notes will not be completed for several years, but we hope to put the smaller denominations into circulation during the current year.

Advance in Profits.

The profits for the year amounted to $2,637,555, an increase of $198,000 over the figures of the previous year but, as we have already pointed out, an increase not at all commensurate with the additional business transacted or the additional responsibility involved. Large advances have been made from time to time to both the Dominion and the Imperial Governments, and these naturally bear low rates of interest. This may be considered as part of our contribution to the cost of the war.

We have continued the payment of the usual dividend of ten per cent. per annum with a bonus of one per cent. at the end of each half year. The annual contribution to the Pension Fund shows an increase of $5,000, owing to the larger number of members of the staff who come within its provisions. We have again been called upon for subscriptions for various patriotic purposes, for which your approval is asked. The war tax on note circulation has this year reached its maximum, and after providing for these items, we carry forward the large sum of $1,332,000 at the credit of Profit and Loss account.

Increased Note Circulation.

There is again a large increase, amounting to $4,735,000, in the item of notes of the bank in circulation, nearly double the increase reported last year. As pointed out at the last annual meeting, the principal reasons for the high level of the note circulation are twofold: first, the high level of all prices, and second, the great business activity caused by the large orders for merchandise and munitions placed in Canada by the Allied Governments. A few years ago it would have been considered most extraordinary that the total note circulation of all the banks should be throughout the year in excess of the total of their paid-up capital. The course of events has thus fully vindicated the foresight of those who devised the provisions of the Bank Act under which the Central Gold Reserves were established, as otherwise there would be to-day no regular statutory provision for the additional bank-note currency needed to carry on the business of the country.

Twenty Billion Turnover.

The deposits now amount to the very large sum of $276,000,000, an increase during the year of $46,529,000. When it is recalled that not until 1901, thirty-four years after the Bank's establishment, did the total deposits equal the amount of this increase, and then only after the taking over of the Bank of British Columbia, the extent of the increase and of the difference in scale in Canadian affairs will be better grasped. We estimate the total turnover of the Bank for the year at 20 thousand million dollars. Needless to say, with the decrease in our trained staff caused by military enlistment, the problem of caring for this vast amount of business does not grow less difficult. The increases in other items of the liabilities do not call for special remark, as they are merely the result of the growth of our business.

Strong Cash Reserves.

Turning to the assets side of the Balance Sheet, we find an increase in our holdings of cash of $8,361,000, of which $1,722,000 is in gold and silver coin, $2,639,000 in Dominion notes and $4,000,000 in our deposit in the Central Gold Reserves. The last item has already been dealt with. Our cash holdings represent 18.19 per cent. of our deposits and circulation and 17.4 per cent. of our liabilities to the public, from which you will see that we have not deviated from our policy of carrying strong cash reserves in these times of difficulty and uncertainty. The large increases in our holdings of Dominion and Provincial Government Securities and of British, Foreign and Colonial Public Securities consist principally of Treasury bills of the Dominion and the Imperial Governments. We have continued, as opportunity offered, to realize on our holdings of other securities and these show a reduction of $1,618,000. Immediately available assets have increased by $37,995,000 and now stand at 53.2 per cent. of liabilities to the public. Call Loans are slightly lower than last year, but Current Loans in Canada have increased by $16,083,000, the net increase in the total of our current loans being $12,097,000. Bank Premises show an increase of $250,618; this is largely accounted for by the purchase of the premises in Calgary which we have occupied for many years, and have now acquired at what seems to be a reasonable figure. Total Assets have increased by $55,947,000 or 19.39 per cent.

In Mexico we continue the policy indicated in our reports of the last few years, of transacting only such limited business as the prevailing conditions will permit. While these have shown some improvement during the year, the present Government has many serious problems to solve, and we fear that some time must elapse before we can reap the benefit which our standing in the community and strong local connections justify us in expecting.

Halifax Disaster.

Since the report of our Halifax Manager appearing in the Review of Business Conditions was written, the whole country has been appalled by the calamity which laid a large section of the city of Halifax in ruins and cost the lives of so many innocent victims. The damage to property and to shipping proves apparently to be even heavier than was at first anticipated, though from the latest reports we are pleased to learn that the financial position of our customers has not been seriously affected. Our sympathies go out to the sufferers, especially to those who have not only lost relatives and friends in the disaster, but are themselves rendered homeless at this inclement season of the year.

1,121 Women Clerks on Staff.

The members of the staff number 3,633, including 280 messengers and 367 janitors; the total, after the withdrawal of the men called up under the Military Service Act, will still be somewhat larger than a year ago. The increase is, however, entirely in untrained women clerks, the number of women being now 1,121, an increase of about 400. On the other hand, the number of male officers has decreased by 128, in spite of the addition of a large number of inexperienced lads under the age of twenty. Having regard to the continued growth of our business and to the decrease in general efficiency caused by the changes in personnel, the burden laid on our men and women grows heavier with each succeeding month. It was therefore particularly gratifying to us that the results of the year's business were such as to justify a more than usually generous percentage bonus to all the members of the staff.

Of our officers 1,422 have now taken up arms, or 75 per cent. of our present male staff, exclusive of messengers. We know that we have supplied our full quota, but we are making efforts to release every man physically fit who is called up under the Military Service Act and who can possibly be replaced, and are asking exemption for only a few officers, the length and the character of whose training are such that they cannot be replaced.

The Roll of Honor.

With grief mingled with pride, we record a total loss of 153 men killed in action, 69 of whom have made the great sacrifice during the past year. No fewer than 255 have been wounded, many seriously, 7 are missing, and 16 are undergoing the hardships of the enemy's prison camps.

During the year the Canadian banks have been called upon to make large advances to the Dominion Government to provide for expenditures in connection with the war, and have also made advances to the Imperial Government for the purchase of our wheat crop, in addition to those already current for the purchase of munitions in Canada. In all this financing the Bank has taken its full share, assisting the Government in the prosecution of the war to the best of its ability. As an item of interest in this connection we may mention that our customers have during the year executed munition orders for a total of over 84 millions of dollars.

Success of War Loans.

The outstanding success of the Victory Loan was a striking tribute to the energy and patriotism of the organization which undertook to place the loan in the hands of the public, and the Finance Minister is again to be congratulated on the result of his endeavors to obtain within Canada as large a proportion as possible of the funds required to carry on the war. As in the case of the last Imperial War Loan the banks were not called upon to subscribe directly, as this would have meant a locking up of their funds in a permanent investment, and would also have tended to inflation as a result of the additional credit thereby created. Instead of this they undertook to make advances to small subscribers with fixed incomes so as to enable them to take a larger amount of the loan than would otherwise have been possible. The encouragement thus given to the habit of saving throughout the community is of the greatest national importance. The total amount of subscriptions to the loan appears to have reached $417,000,000, from about 807,000 subscribers, a financial accomplishment of the first magnitude. The subscriptions received through the branches of this Bank amounted to about $80,000,000 from over 116,000 subscribers.

Gold Reserves Problem.

After the United States came into the war the shipments of gold from Great Britain to that country ceased, and, as pointed out in the report of our New York Agent, a slight adverse movement set in; in order, therefore, to conserve its holdings and to prevent gold from reaching the enemy, the United States Government placed an embargo on exports of the metal. Upon representations being made at Washington, however, through the Canadian Bankers' Association, as to the unfairness of enforcing the embargo against us, the release to Canada of a certain amount of gold was arranged for. While this will, doubtless, aid in the stabilizing of the exchange between the two countries we feel that it is important that the underlying gold reserves of Canada should be increased to correspond with the great increase in the liabilities of the Canadian banks resulting from war activities. To this end we consider that our endeavors should be directed, and we believe also that the Government of Canada should place an embargo on the export of gold produced in Canada, and see that it is made available for this purpose.

Railways a Vital Factor.

Probably few people realize how essential to modern business is prompt and reliable railway service, or how the lack of such service invariably means high prices to the consumer. No modern business could continue in operation were the transportation facilities of the country suddenly to be suspended. A full consideration of the relation between delays in transportation and increased cost to the consumer is out of place here, but it may confidently be asserted that promptness and regularity of service are of more importance to business men and to the general public than low freight rates. Unfortunately of late years Government efforts have been directed almost entirely to the reduction of the latter, while ignoring altogether the greater importance of the former. The general increase in freight rates recently granted is a step in the right direction. The pass to which the railways of the United States have been brought in this connection is well described by our New York Agent in the Review of Business Conditions, although since his report was written, the United States Government has placed all the railroad lines in the country under the control of a Director-General, to be operated as a single system. Fortunately for the public interest, one of the great Canadian railway systems has not been dependent entirely upon its income from transportation, or the problem here would have become more acute. The cost of operation, that is, of labor, materials and supplies, has risen enormously in recent years, without a corresponding increase in the revenue from transportation. It is not always borne in mind that the development of Canada, and its subsequent increase in wealth and population, would not have been possible without the construction of the railroads, and that the large number of people who have invested in railroad securities have, therefore, performed a public service of the highest importance. Whatever may have been the motives which prompted the investment, this service still calls for some measure of recognition.

Need of Greater Thrift.

And now a few words as to the future. Up to the present the high cost of living, of which we hear so much, has borne heavily on comparatively few. The great majority of Canadians who are not serving in the armed forces of the Empire more to spend than they ever had before, and many are spending it. They scorn carefulness and the small economies that must perforce be practised by the inhabitants of less favored countries. But there will come a time when high taxation and uncertainty as to the future will make men hesitate to embark on new enterprises, when there will be double the number of applicants for half the number of jobs and when food will be still more scarce than it is at present. Only then shall we realize the full effects of the high cost of living. How shall we prepare for that day? The great need of the world will then be abundance of food, at reasonable prices, and if we in Canada by stimulating production, transportation and distribution, are able to supply the nations in abundance, we shall not only have laid broad and deep the foundations of prosperity for ourselves, but shall have earned the gratitude of the nations. We shall have found a way to utilize the services of the unemployed and to lower as far as possible the high cost of living. The machinery for accomplishing this cannot be created on the spur of the moment, and we must equip ourselves beforehand to cope with the changed conditions which will prevail after the war. We must so co-ordinate the productive forces of the nation that there will be, as it were, the nucleus of an organization already prepared to utilize the labor of the unemployed in the production of food, and in its distribution and transportation to the great markets abroad. The period of strain immediately following the war will pass away in time and normal conditions will again prevail. In order that this trade should be permanently successful under these normal conditions, it must be organized from the beginning with a view to efficiency and placed on a sound economic basis. When we consider what difficulties have been overcome in order to transport fresh meat from Australia, New Zealand and the Argentine through the tropical zone to the markets of Europe, we cannot but believe that the less serious difficulties confronting Canada can be successfully solved. We have millions of acres of productive land, we expect to have an abundance of labor, but we require organization and leadership.

PRESIDENT'S ADDRESS.

We meet again with the shadow of the great war affecting everything we say or do. We are nearer the end than we were a year ago, but only because a year has passed; in other ways there is no sign of the end. Although the war is in its fourth year, it is still full of surprises, indeed, the year has been one of many and swift changes. The submarine menace, so ominous at one time, is still very serious, "held but not yet mastered," as Sir Eric Geddes lately said. However, we no longer doubt our ability to cope with it, partly by a lessening in the number of ships lost and partly by vastly increased shipbuilding. The collapse in Russia and the set-back in Italy have altered the aspect on the Western front from one in which victory seemed near to one in which it may perhaps be necessary to wait for the new armies of the great republic, before the war can be pressed to its final stage. Unless Russia comes back into the fighting line, we have to meet the armies of the enemy thus released, but we are not afraid of the enemy ever again breaking through the Western front, and by next spring not only will there be a great accession of strength from the United States for fighting on land, but the building of aircraft and the training of armies of airmen will vastly alter the character of the struggle. Our greatest danger is lest we should falter, because victory is less easy to attain than we thought.

Foreign Trade Improves.

In considering our industrial affairs we find that, disregarding as usual shipments of gold and bullion, our exports for the fiscal year ending 31st March last, were $314,706,654 in excess of our imports, and for the following six months ending 30th September, the excess was $237,574,462, making for the eighteen months a surplus of $552,281,116 in the value of our exports. The gain in exports for the fiscal year was $399,911,030, while the increase in imports was $334,292,650. We therefore improved the results of our foreign trade by $65,618,380 as compared with the year preceding. The figures for the broken period indicate an increase on a much larger scale. Of the improvement during the fiscal year, over 350 millions is due to agriculture and to manufactures, the total increase from the mine, the forest, the fisheries, and animals and their products being less than 50 millions. The exports of manufactures amounted to 487 millions, an increase of 237 millions over those of the preceding year. There is an increase in exports and imports under almost every heading, but the only very noticeable item is that of $149,930,000 for military stores, munitions of war, etc., "imported and remaining the property of the Imperial Government." In this there is an increase of $111,296,000 over the corresponding figures for 1916. These imports, mainly necessary to complete munitions being made in Canada, do not affect this country in a financial way. Coal cost us $11,500,000 more, sugar $10,800,000 more, and provisions, much of which was doubtless exported again, $17,500,000 more. Of the various forms in which iron, copper and other metals are used as raw materials, ranging from the ore to beams, tubes, wiring, etc., we imported about $42,000,000 more than in 1916. These partially manufactured articles come under a great variety of headings, but they are all, or almost all, forms that we should eventually make in Canada. I regret to say that articles of luxury still show rather too prominently in the list of imports, and there is not much evidence of restraint on the part of Canadians in the purchase of unnecessary things. A surplus of 550 millions in our foreign trade for the 18 months ending September last leaves, even after interest on foreign indebtedness has been paid, a sum of money unheard of in the past, and to this is to be added the results of the crops since marketed or still to be marketed at prices hitherto unequalled, as well as the results of other products of our industry. The field crops of Canada for 1917 are valued at $1,089,000,000. All of this vast wealth is, however, needed for the conduct of the war, and the problem of the hour is how to apply it to that purpose, wherever it is not needed for some other equally urgent purpose. Great Britain, by shipments from various parts of the world through Canada to the United States, has sent to that country over a billion dollars in gold, but the time has now come when she must have credit for practically all her purchases, and obviously our own Government must have similar credit, except to the extent to which the cost of the war is paid by taxation. The extent to which we can supply money to our own Government for its share in the cost of the war and also supply money to Great Britain for munitions of all kinds, including the agricultural and pastoral products of Canada bought by Great Britain, depends on how far we are willing to avoid spending money on anything unnecessary to reasonable well-being, and clearly such an effort we have not made. Capital is not, however, in any large measure, being fixed in betterments, either by individuals, municipalities, or provincial and Dominion governments, and thoughtful people, at least, are spending less, and realize that we are engaged in the struggle of the ages. Now that the United States has entered the war there is no market for our securities outside our own borders, and therefore we are being put to a greater test of our economic powers than ever before. If provinces or municipalities have securities to sell they must be sold at home.

Trade With United States.

In the year ending 31st March, 1917, we bought goods to the value of 865 millions abroad and of these 678 millions came from the United States. As we sold that country only 290 millions we had to find 388 millions in money or securities. We can now sell securities nowhere but at home, and our export and import business is done almost entirely with Great Britain and the United States. We export to Great Britain enough more than we import to cover our shortage with the United States, and a large sum besides. Therefore it is clear that in respect of what we owe the United States that country must lend to Great Britain a sum corresponding to our sales to the latter country, if we are to continue to trade with the United States. Since the United States has entered the war, however, large orders for war supplies for their use have been placed in Canada, and it is too early to tell how these will affect our trade balance with that country. It should not be hard to understand from these figures how vitally important it is that we should not buy outside Canada a dollar's worth of merchandise that is not absolutely required for our most pressing national purpose, which is to win the war.

Government Issues.

The success of the Finance Minister in his share of the financing of the war has been so signal and its latest phase is so well known to you, that I repeat certain details now only for the information of our foreign shareholders and correspondents. In January the issue of War Savings Certificates began and thus far over 195,000 have been sold, amounting to twelve million dollars. The importance of these certificates, which are issued in denominations of $10, $25, $50 and $100, is not so much the amount thus secured as the opportunity they offer to almost every individual to save and to take some share in the nation's financing. In March the third Canadian war loan was brought out. The amount to be issued was $150,000,000, the loan being for twenty years with 5 per cent. interest, and the price 96. The net subscriptions, after deducting conversions and the subscriptions of the banks, amounted to $182,000,000. There were over 40,000 subscribers, as against 25,000 for the first and 30,000 for the second loan, the total thus far secured being $350,000,000. As no unusual effort was made, the results were very gratifying. In August the Minister secured in New York, by two-year 5 per cent. notes, $100,000,000, of which 20 millions were used to retire the balance of a loan obtained in 1915. In November the fourth Canadian war loan was offered. At that time we had before us the fact that while the Finance Minister had readily obtained from the Canadian people what he had asked for, they had subscribed to the third loan in the proportion of only about one in every two hundred.

807,000 Subscribers.

Having this in mind, the Finance Minister created an organization calculated to show what the Canadian people could do. An extraordinary body of bond-dealers, bankers and other business men, aided by the 3,000 branches of the banks, in a comparatively short campaign secured subscriptions for 417 millions of dollars from 807,000 people. If to these we add the 195,000 purchasers of War Savings Certificates and disregard the duplication of names, we find that about one in eight of our people have responded to the call. The Minister had offered a loan of $150,000,000, repayable in 5, 10 or 20 years with 5½ per cent. interest, issued at par with a slight advantage in interest to the subscriber in making his payments. He had stated that subscriptions in excess of 150 millions would be accepted in whole or in part, and the hope was that 250 or 300 millions would be secured. It is safe to say that such a figure as 400 millions was not deemed to be within the realm of possibility.

War Finances.

The actual disbursements of Canada for the war, to 30th November amounted to $685,000,000. To this must be added outstanding expenses and estimates for the balance of the year to cover requirements here, in Great Britain and in the field of war. These, carefully computed, indicate that at the end of the year the cost of the war to Canada was about $760,000,000. It is well known that, in addition to the task of finding money for such vast expenditure, the Finance Minister has been called upon to aid the Imperial Government to provide for a large part of the cost of munitions, etc., purchased in Canada. In addition to advances to the Imperial Munitions Board of 380 millions, as much as 32 millions was lent for the purchase of cheese, 15 millions for agricultural products, and about as much more for other items. Against this there are offsets in connection with the upkeep of our troops and with other matters, but the final result at the moment leaves Great Britain considerably in debt to the Canadian government.

The Chartered Banks.

A comparison of the figures of the chartered banks as in July, 1914, and in October last is very impressive. The total liabilities have grown from $1,323,252,000 to $1,995,488,000, an increase of $672,236,000, the growth in deposits being $589,837,000 and in note circulation $95,037,000. As against this, loans have increased $128,544,000, securities $320,742,000, cash $70,572,000, exchanges with other banks $50,911,000, balances due by foreign banks $20,429,000, and deposits against excess circulation $76,370,000. The addition to loans and securities of $450,000,000, and that large part of the remaining loans which has taken the place of ordinary industrial loans before the war, represent the financial aid rendered by the banks to the carrying on of the war, but the banks have now to face the loss in deposits which will be caused by the payments to be made for the Victory Loan. This will in any event mean something between three and four hundred millions of dollars by next May. It is true that the money in the end will return to the banks in one form or another, but not necessarily to the same banks and not in the same form. The loss of savings deposits, built up over a series of years and now transferred permanently into a new form of saving in which the banks have no part, is being borne cheerfully because the reason for it is imperative, but it would be foolish not to recognize what a serious and difficult operation the great war loan is to the banks. The banks still hold the Imperial obligations for munitions amounting to one hundred million dollars referred to a year ago, and during the past year they have made loans to the Dominion Government more or less connected with aid to the Imperial Government. In January they bought Canadian Treasury bills for 50 millions maturing early in 1918, in July and August 70 millions of three and five months bills, and in October 75 millions maturing in 1919. It will be observed that all of these loans except the last have been or will be shortly repaid.

Absorb Securities at Home.

The sales of Canadian securities for the calendar year 1917 show a much larger total than ever before, but the issues, other than those of the Dominion government, are naturally very small. As usual we supply the following details from the annual estimate of the Dominion Securities Corporation:—

Securities.	Total Sold.	In Canada.	In United States.	In Great Britain.
Government .	$693,420,279	$551,180,279	$142,240,000	
Municipal ..	25,219,103	19,387,738	5,831,365	
Railway	22,566,666	200,000	17,500,000	$4,866,666
Public Service Corporation .	15,425,000	1,825,000	13,600,000	
Miscellaneous	16,110,800	8,370,800	7,740,000	
Total	$772,741,848	$580,963,817	$186,911,365	$4,866,666

That 580 millions of securities could be placed in Canada in one year in addition to the aid given by the banks to the manufacture of munitions, is very surprising, but we must remember that it was still necessary to obtain 190 millions from outside during the year and that not only are these avenues now completely closed, but if we hope to continue the making of all kinds of war products as actively as heretofore, we must find at home much larger sums in 1918 than in 1917 for investment in war securities. Even if the sale of the relative securities were possible, all expenditures, except for the war, must be restrained, and this is abundant reason for the recent order-in-council under which new issues in Canada of the securities of any province, colonial or foreign government, municipality, corporation or incorporated company, may be sold only with the approval of the Minister of Finance.

Clearing House Records.

The totals of the twenty-five clearing houses re[illegible]ect the increased volume of almost all products and the high [illegible] prevailing. In every clearing house there is an in[illegible] compared with 1916. The total amounts to $12,554,[illegible] compared with $10,557,060,000 for the previous year, a growth of 18.92 per cent. The total for the eight clearing houses in existence in 1901 was $1,871,061,000 so that in sixteen years the figures have grown 571 per cent.

We also subjoin as usual the building permits of the four chief cities of Canada for 1913, the year previous to the outbreak of war, for 1916, and for the year just ended:—

	1913.	1916.	1917.
Montreal	$27,032,000	$5,334,000	$4,387,000
Toronto	27,038,000	9,882,000	7,163,000
Vancouver	10,423,000	2,412,000	768,000
Winnipeg	18,621,000	2,507,000	2,212,000

War Supplies.

We have found it rather more difficult than usual to obtain statistics regarding the quantity and the value of the various kinds of war supplies made in Canada, but as heretofore such figures as we are able to give are highly illustrative of the importance of this work, both as a part of our contribution to the war and as the main basis of our prosperity at the moment. There is a reduction in the output of many kinds of shells, fuses and cartridge cases, as purchases are being restricted to certain sizes. On the other hand, however, there is an important development in the building of steel and wooden ships and of aeroplane engines, and also of aeroplanes of a certain type. With these exceptions there is a large decrease in purchases by Great Britain, due doubtless to the inability of Canada to grant the necessary credits. It is therefore most gratifying to know that the Chairman of the Imperial Munitions Board has made arrangements with the Ordnance Department of the United States to use, until next midsummer, such surplus facilities existing here for the production of munitions as will help to meet the requirements of that country. Canada is producing gun ammunition, including propellants, high explosives, fuses and cartridge cases in 550 factories situated from St. John in the east to Victoria in the west. In addition to contracts given to private corporations, the Imperial Munitions Board has developed government factories for the loading of fuses, for the production of powder and high explosives, for the manufacture of sulphuric and nitric acids and acetone, and of steel and forgings, and for the construction of aeroplanes. On these plants the sum of $13,500,000 has been expended for account of the Imperial Government. The Board has also contracted for the building of a large number of the latest type of high-power aeroplane engines for the use of fighting planes at the front. This engine represents the highest type of workmanship of any engine that has been produced, and we may well be proud that such a young and inexperienced country as Canada is able to undertake the work. Even more important from the industrial point of view is the fact that there are now under contract in Canada for the Imperial and the Norwegian Governments, steel and wooden ships aggregating in value over $90,000,000. Up to December, forty-four steel and forty-six wooden steamships had been ordered. The steel ships range from 1,800 to 8,800 tons dead-weight, with a total carrying capacity of 213,600 tons, and the wooden ships have an individual carrying capacity of 2,500 tons dead-weight, with a total of 115,000 tons. In addition to this twenty-two steel vessels, of 3,500 tons dead-weight capacity each, have been ordered on Norwegian account, a total of 77,000 tons. This makes a grand total of one hundred and twelve ships with 405,600 tons capacity. The steel ships are being built at New Glasgow, Montreal, Toronto, Welland, Midland, Collingwood, Port Arthur, Vancouver, North Vancouver. The wooden ships are being built at Liverpool, St. John, Isle of Orleans, Côte St. Paul, Quebec, Three Rivers, Toronto, Fort William, Coquitlam, New Westminster, Vancouver, North Vancouver and Victoria.

Munition Metals.

As a consequence of the work of the Imperial Munitions Board, Canada is for the first time producing refined spelter (zinc) and refined copper and there is an important increase in the output of refined lead. The natural result of refining our spelter and copper is the local production of brass, and this again enables many articles made of brass to be produced from our own metal. The value of the orders thus placed by the Board exceeds $1,000,000,000 and the actual disbursements to date are almost $800,000,000. The number of complete shells thus far produced is 49 millions.

War Purchases.

The purchases made under the authority of the War Purchasing Commission for account of the Department of Militia, of the Department of Justice for interned aliens, and of the Department of the Naval Service, have been smaller as a whole than last year, although the purchases for the last-mentioned department have been larger owing to the increase in naval work at Halifax. We have been able to secure some interesting figures covering a part of the activities of the various departments. They are as follow:—

Department of Militia:	
Arsenals, supplies for manufacture of ammunition, etc.	$ 1,500,000
Clothing	5,000,000
Dental Supplies	120,000
Fish for C.E.F. in England	300,000
Mechanical Transport Supplies	300,000
Medical Supplies	500,000
Provisions, including food, fuel and forage..	7,500,000
Railway Construction Equipment	270,000
Stoves and Miscellaneous	2,500,000
	$17,990,000
Department of Justice:	
Internment Operations	700,000
Department of Naval Service	2,500,000

These departments also have appropriations which do not come under the control of the War Purchasing Commission.

British Purchases.

The public will be interested to learn that the Navy and Army Canteen Board of London, through which the various canteens of all the British forces are mainly supplied, sent a representative to Canada to secure assortments of Canadian products for sale in the canteens. The products selected were: canned meats, canned salmon and other fish, condensed and evaporated milk, biscuits, chocolate, candies, preserved fruits, jams, evaporated fruits, etc.

About a year ago the War Purchasing Commission secured samples of fish such as cod, haddock, pollack, etc., for the Board of Trade in London. This resulted in their placing in Canada large contracts for fish.

We are also able to afford approximate figures for purchases made on account of the British War Office by the Canadian Pacific Railway Company, as follows:—

Foodstuffs	$14,000,000
Merchandise of Iron and Steel	700,000
Sugar	8,000,000
Forestry and Railway Equipment	2,000,000
Other Articles	1,000,000
	$25,700,000

The purchases by the Department of Agriculture down to December cover about 110,000 tons of hay, 35 million bushels of oats, and 275,000 tons of flour, requiring about 14 million bushels of wheat. The total value of these purchases is about $48,000,000

Activities in Production.

We have made an attempt also to follow the purchases of such ordinary articles as wheat, cheese and meats. It is understood that the purchases in Canada by the Wheat Export Company of wheat and oats from this year's crop will reach 350 million dollars in value, and that there have been shipped cheese valued at between 30 and 40 million dollars and a large supply of meats, partly the product of Canada, and partly from animals bred in the United States, but cured here. The published returns are not easy to follow but we appear to have exported, during the year ending March, 1917, live animals, including horses, to the value of 15 millions and meats to the value of over 60 millions; against this we have apparently imported meats to the value of about 25 millions. For the six months ending September the totals of both imports and exports, measured only by value are on a basis 50 per cent. higher than for the previous year.

These figures show some of the activities of the Canadian people in the way of production, but the need is greater, in some directions much greater, than ever before. The outpouring of supplies of all kinds, from wheat to shells, must go on, but the most crying needs are for sea-going ships, aircraft and those forms of food which are more necessary than others to sustain life in its fullest vigor and without a sufficient supply of which the allied nations are threatened with starvation. The supply of wheat is vital, and the losses of shipping add enormously to the difficulty of obtaining supplies from the southern half of the world. At the same time the scarcity of labor makes the life of the North American farmer so difficult that he needs all our sympathy, and should have all the assistance which the city worker or student can give him in summer time.

The Food Question.

One of the most valuable foods for the soldier is bacon. He can apparently do more fighting on it than on anything else. In the United States, when necessary, breeding stock and help in other forms is being supplied to farmers to ensure the largest possible production of bacon, and associations of breeders have been formed for the purpose of distributing well-bred stock. This is being done by men who realize that if we fail in producing greater quantities of bacon than ever before, we shall fail in our duty to the soldiers. In this country we have been occupied in an effort to place the blame for the high price of an article, which, beyond any doubt, we ought not to consume in large quantities just now, and we have apparently forgotten that the price has gone up mainly because bacon is vital to carrying on the war and that if we do anything to lessen the efforts of the producers, the price will certainly be much higher next year than it is now. In England well-to-do people are standing in line for their food supplies, and they, at least, are learning that the talk of famine is not a story to frighten children with, but a terrible possibility. The harvests have not been plentiful and the danger is as real as the menace of the submarines. We ask the farmer, in spite of the great difficulties which confront him, to produce to the last ounce, but how can we make our city people save food, remembering that every ounce saved will provide food elsewhere for those who without it must starve?

High Cost of Living.

We are living in a time of social unrest affecting greater areas of disturbance than the world has ever known. We are experiencing this unrest at a time of which it may be said, that those who live in our part of the world were never so easily able to obtain employment suited to their varied capacities, never so highly paid, so far as those are concerned who aid in the production of goods for sale, never so prosperous, using the word in a material sense. The price of everything, however, was almost never so high, and the purchasing power of the dollar has declined so much and so rapidly that people with a more or less fixed income suffer keenly, while those who earn more money than they could have conceived possible a few years ago, are disappointed and apparently surprised to find that everything else has advanced in price in proportion to their high wages. Out of this turmoil has come a bitterness towards all who, by any stretch of fancy, can be held responsible for existing conditions, a bitterness often without any real basis, and which is accompanied by explosions of wrath directed at whatever happens to be the nearest object of criticism, but, if continued, and kept at fever heat as it has been of late, promises ill for our country after the war. I am aware that I shall be accused of defending Capital and what are called the Big Interests, but there must be many readers of the annual addresses made by the officers of this Bank who will believe that we try as faithfully as we are able, to portray conditions as they exist. Nothing in the end is to be gained by blaming the premier or the food controller, the provision dealer or the farmer, for high prices which are not merely a result of the war but a result of war requirements so peremptory that the question of cost almost disappears. The conditions arising out of the war are at the bottom of most of our troubles, and what is necessary is not only fair dealing on the part of those who supply the wants of the people, but patience, and some remnant of belief in our fellow-men, on the part of those who feel the pinch and who, perhaps naturally, would like to punish somebody. If dealers have combined to put up prices, let them be punished, but apparently we are complaining because dealers, in buying from producers, did not combine to lower prices or to keep them down. The needs of the war are, however, so great that no combination can control prices either in one way or the other.

The Ruling Motive.

At the present moment the world provides wealth, and also material comfort, on a scale so vast, when compared with conditions a century ago, that surely no one will deny that the energy and the laws which have made this possible have been as a whole of enormous benefit to humanity. Yet this improvement in conditions is created by an appeal to the self-interest which exists in us all. To produce the best that we are able and to sell it for the highest price we can get, is what we are trying to do, whether our product be a day's work, a bushel of wheat, a plough, an intellectual or an administrative service of some kind to society, or a creation in the fine arts. Those who can honestly say that they are not so moved are either the idle rich, who are always a problem, or are too exceptional to affect the world as a whole. What is surely necessary is not to restrict the production of labor or merchandise at a profit, because clearly that is the impetus to industry, but to see that this industry and ability are guided into channels which are beneficial to the community and not hurtful. That the free exercise of industry and ability in accordance with the laws of the country and with the best existing standards of character, will enable one man to become very rich and another to earn only enough to support his family, is a fact for which nature is mainly responsible, and for which the ingenuity of man has not thus far found a remedy. If society by its laws should choose to limit the amount of wealth which any one may accumulate, let us wait until it has done so before passing judgment and when we undertake to express our opinion of the character of those who possess great wealth, let us judge them by the use they are making of it, by the extent to which they regard it as a trust which came to them only because they were in some things abler than their fellows, and as a means through which they may leave the world the better because of their existence. Many rich men do not come up to this standard, and by inheritance taxes we are gradually adjusting matters, but in North America there are so many instances of good service rendered to the state by wealthy citizens that one wonders if we should not be greatly the losers by any new condition which would hamper individuality and, in so doing, perhaps destroy the main factors which separate our twentieth century comfort from the miseries of the middle ages. In contending for a more rational consideration of the relations between the consumer and the producer, we have no intention of claiming that conditions are satisfactory, nor are we expressing an opinion regarding the relations of employers and employed, and certainly we hold no brief for either side. A great bank is vitally concerned with what will conduce to the true interest of the country, and that means the greatest amount of well-being on the part of its citizens.

Conditions After the War.

We have to face new and probably very difficult conditions after the war. If we are filled with animosity and distrust in our attempts to adjust our differences, the result will be a sorry one; if, on the other hand, with the experience we shall gain in many ways by the war, we co-ordinate the forces of industry we possess so as to present a united and efficient front, we may hope to enjoy in the fullest degree the peace and liberty for which our boys are fighting, together with greater prosperity than we have ever known. To accomplish this there are at least three elements which must be present. In our leaders of industry we must have enterprise and skill, and we must have plant and capital on a scale adequate to compete with other nations. Only the profits made and the experience gained during the war can render this possible. We must have technical knowledge of how to solve every difficulty, physical, chemical, or whatever it may be, that confronts the manufacturer, and some steps are being taken towards that end. More, however, than anything else, we must have such relations between the employer and the employed as will cause the employed to do heartily each day a full measure of his best work. The last is the great difficult to be overcome, and the element about which there is unfor tunately the most doubt. This is said with no intentic whatever of apportioning blame. One would suppose there must be faults on both sides. The fact remains if we are to compete successfully with other nations we r recover the older condition when men were proud of the they worked in and of its product. It may only be a mate question, but it may be a psychological one. Have emplo and employed struggled with each other until the only na feeling is antipathy, or can each be made to feel that so necessary to the other that not to work together at best is folly, apart from the economic crime involved?

The Monthly Letter.

In the President's address until a few years ago an a tempt was made to cover in more or less detail the industri position of Canada and of such other areas as, through o branches, we may be connected with. This is now done muc more satisfactorily in the Review of Business Conditio written by leading officers of the bank, and this makes it u necessary for me to deal with the financial and other con tions in Great Britain and the United States arising out the war and in which Canada is so deeply interested. For last two years we have also been publishing a Monthly Lett the importance of which is now widely recognized. In it current statistics of finance and trade are published, and addition to notes on subjects of interest, there were in 19 diagrams covering the mineral production of Canada, earnings of Canadian railways, freight traffic through canals at Sault Ste. Marie, agricultural and industrial prod tion, and wood for pulp exported and manufactured. We h that those among our shareholders and customers who sufficiently interested will read these publications.

Personal Thrift.

We have been told that we should save money, not fo our own benefit so much as because we should not spend unnecessary things the money needed to carry on the war. It is even more necessary that we should eat less, again not so much because we need to save for ourselves but because if we do not eat less others across the sea must go hungry. If we have men, money and food we shall win. If we fail in any of these we may lose. Individual tests, particularly in hotels and restaurants, show that very large savings can be made wherever the effort is directed to that end, but the difficulty is to make advice, or even the regulations of the Food Controller, effective in a country which produces food largely in excess of its own requirements and where economy in the use of food is thought to be evidence of a mean and sordid disposition. It is not, however, enough that we should eat less but that we should as far as possible replace some articles of food, especially white bread and bacon, with others. There is a satisfactory increase in the use of fish but only a small fraction of our people are responding in any degree to the call to economize. England has reduced the supply of sugar per capita per annum from 93 pounds to 26. Our normal supply is 90 pounds and we are not reducing it yet. Working in harmony with the United States, an order-in-council has been passed prohibiting the export, except to places within the empire, of food and relative commodities, unless a license has been obtained. The Food Controller is bringing under license the milling and packing industries, and is controlling the refining and distribution of sugar.

The license system will also be applied to fish, fruit, vegetables, groceries, package cereals, milk, etc. In our London Manager's Review of Business Conditions the following deeply significant words will be found:—

> "Too much importance cannot be attached to the "steps that may be taken in the United States and Can-"ada towards conserving food-stuffs, with a view to in-"creasing the amount available for export to the Allies. "The shortage of food, with which all the belligerents "are confronted, and the difficulty of increasing produc-"tion, owing to the lack of available man power, may "hasten, or even prove the dominating factor, in bring-"ing about a cessation of hostilities."

He means, of course, that such a shortage may prevent us from continuing the war until we can end it on our own terms. Do you wonder therefore that we return so often to this subject? Difficult as the problem may be, we must produce more, and we must eat less, otherwise some of those who are dearest to us across the sea must starve and we may lose our chance of dictating a peace, the nature of which shall be a guarantee that our children shall not have to fight again for those iberties which are now in jeopardy.

MONEY MARKETS

Messrs. Glazebrook and Cronyn, exchange and bond ers, Toronto, report the following exchange rates to *The etary Times*:—

	Buyers.	Sellers.	Counter.
funds	1 1-16 pm	1⅛ pm	....

Report of the Auditors to the Shareholders of the Union Bank of Canada

In accordance with the provisions of sub-sections 19 and 20 of Section 56 of the Bank Act, we report to the Shareholders as follows:—

We have audited the above Balance Sheet with the books and vouchers at Head Office and with the certified returns from the branches.

We have obtained all the information and explanations that we have required, and are of the opinion that the transactions of the Bank which have come under our notice have been within the powers of the Bank.

In addition to our verification at the 30th November, we have, during the year, checked the cash and verified the securities representing the investments of the Bank at its chief office and principal branches and found them to be in agreement with the entries in the books of the Bank relating thereto.

In our opinion the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the affairs of the Bank, according to the best of our information and the explanations given to us, and as shown by the Books of the Bank.

T. HARRY WEBB, E. S. READ, C. R. HEGAN,
Auditors

Winnipeg, 18th December, 1917.

THE BANK OF TORONTO

Report of the Sixty-Second Annual General Meeting

The Sixty-second Annual General Meeting of the Stockholders of the Bank of Toronto was held at the Head Office, in Toronto, Wednesday, 9th January, 1918.

The chair was taken by the President, Mr. W. G. Gooderham; the Assistant General Manager, Mr. John R. Lamb, was requested to act as secretary, and Messrs. George R. Hargraft and C. H. Taylor were appointed scrutineers.

The Secretary read the Annual Report as follows:—

The Directors of the Bank of Toronto beg to present their Report for the year ending 30th November, 1917, accompanied by the Statement of the Bank's affairs and the results of the operations for the year.

PROFIT AND LOSS ACCOUNT.

The Balance at credit of Profit and Loss, on November 30th, 1916, was	$ 507,989 87
The Net Profits for the year, after making full provision for all bad and doubtful debts, and deducting expenses, interest accrued on deposits and rebate on current discounts, amounted to the sum of	802,920 49
	$1,310,910 36

This sum has been appropriated as follows:—

Dividend No. 142, Two and three-quarters per cent.	$137,500 00	
Dividend No. 143, Two and three-quarters per cent.	137,500 00	
Dividend No. 144, Two and three-quarters per cent.	137,500 00	
Dividend No. 145, Two and three-quarters per cent.	137,500 00	
		550,000 00
War Tax on Circulation	$ 49,403 83	
Transferred to Officers' Pension Fund	25,000 00	
Patriotic Fund and other War subscriptions	29,200 00	
Toronto General Hospital	2,000 00	
Written off Bank Premises	100,000 00	
		205,603 83
Carried forward to next year		555,306 53
		$1,310,910 36

The business of the country has continued throughout the year at increasingly high levels. The resources of the Bank have increased and have been steadily employed.

The Head Office and Branches of the Bank have been regularly inspected by the Inspection Staff, and at the Head Office the usual special inspection of cash and securities has been made.

Mr. G. T. Clarkson, C.A., the Auditor of the Bank, has made his examination of the principal offices of the Bank, and his report is appended to the general statement presented herewith. Mr. Clarkson's name will be submitted to the Shareholders at the Annual Meeting for re-appointment as Auditor.

All of which is respectfully submitted.

W. G. GOODERHAM,
President.

W. G. GOODERHAM, President.
THOS. F. HOW, General Manager.

Toronto, 30th November, 1917.

AUDITOR'S REPORT TO THE SHAREHOLDERS.

To the Shareholders of the Bank of Toronto:

I have compared the above Balance Sheet with the books and accounts at the chief office of the Bank of Toronto, and certified returns received from its branches, and after checking the cash and verifying the securities at the chief office and certain of the principal branches on November 30th, 1917, I certify that, in my opinion, such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs, according to the best of my information, the explanation given to me, and as shown by the books of the Bank.

In addition to the examination mentioned, the cash and securities at the chief office and certain of the principal branches were checked and verified by me during the year, and found to be in accord with the books of the Bank.

All information and explanations required have been given to me, and all transactions of the Bank which have come under my notice have, in my opinion, been within the powers of the Bank.

G. T. CLARKSON,
Chartered Accountant.

Toronto, December 19th, 1917.

After the Report had been read, the President, Vice-President and General Manager addressed the meeting.

It was then moved by the President, seconded by the Vice-President, and resolved that the Report of the Directors and Statement now presented be adopted, and that printed copies thereof be distributed to the Stockholders.

Motions were also passed approving the action of the Directors in subscribing to Patriotic Fund and other War subscriptions, appointing Mr. Geoffrey T. Clarkson as Auditor for the current year, and tendering the thanks of the Stockholders to the President, Vice-President and Directors for their attention to and careful management of the Bank's affairs during the past year.

The following Directors were then elected for the ensuing year: W. G. Gooderham, William Stone, John Macdonald, Lieut.-Col. A. E. Gooderham, Joseph Henderson, Brig.-Gen. F. S. Meighen, J. L. Englehart, William I. Gear, Paul J. Myler and Archibald H. Campbell.

At a subsequent meeting of the new Board, Mr. W. G. Gooderham was unanimously re-elected President and Mr. Joseph Henderson Vice-President.

TO TAKE UP RAILS ON LINES NOT VITAL

Main Arteries of Railway Traffic to be Kept in Condition —Action by War Board

In order to secure the rails required to keep the main arteries of traffic in good condition, it was decided at a meeting of the Canadian Railways War Board at Montreal on Tuesday to petition the government to take up the metal on lines that are not vital. This work will entail the removal of 1,500 to 2,000 miles of rails, and the government will be asked to hold over certain classes of labor continually passing through Canada to Europe to handle it. Some 20,000 laborers will be wanted, and their wages, about $50,000 a day, will be spent in this country.

The Canadian Railways War Board, furthermore, in view of the growing scarcity in food supplies and the imperative necessity that Canada produce every bushel of grain possible, has addressed the food controller, asking that he use his influence with the government to have sufficient of this labor retained here during the next summer in order that the farms may be worked to their limit.

To Send Back Cars.

As a result of representations made by the Canadian Railways War Board to the American railway authorities at Washington, the United States railways have been ordered to send nearly six thousand empty box cars to Canada, and deliveries of these cars will be accomplished as speedily as the lines to the south can move them out of the congested district. With these cars available the Canadian railways will be in a position to move a great deal of the freight which has been delayed in Canada awaiting cars to move it to the United States.

With a view to expediting the movement of traffic between Toronto and Montreal, the Canadian Railways War Board directed the Canadian Northern Railway to accept fifty cars of freight per day from the other lines at Toronto for movement east.

To Help Coal Shortage.

Action taken towards remedying the coal shortage in the Dominion was also reported. The government railways have been ordered to run only one train a day between Halifax and Montreal, it was stated, while it was also announced that the accumulation of traffic, consisting principally of coal coming into Canada at the American frontier, was entirely cleared.

The shortage of flat cars for the movement of munitions and other important materials in Ontario, it was stated, had been met by the rushing of 300 idle cars from the west.

Supplementing the saving in coal consumption which the railways have already accomplished, an order was issued today by the Michigan Central Railway calling for a reduction in the passenger service of that line in Ontario, which at present is in excess of the needs of necessary travel.

In Western Canada, the action taken by the Canadian Railways War Board to increase the movement of coal from the mines to the prairie cities and towns, it was said, has had the effect of greatly diminishing the shortages which were reported a few weeks ago.

NATIONAL LIFE REPORT

The National Life Assurance Company held its nineteenth meeting this week. Mr. Elias Rogers is president of the company, Mr. Albert J. Ralston is first vice-president and managing director, and Mr. F. Sparling is secretary. A good financial statement was presented. It was explained at the meeting that Dominion government, provincial government, city, town, county, village, township and school debentures, are taken in the statement $109,498.70 below the par value. The bank stocks and Toronto Consumers' gas stock are taken in at book value. The head office building is given a market value of $275,000. Under the Insurance Act the company is entitled to use this value, but it has been taken in at the book value of $230,000. Equipment and treasury vault include all supplies, office furniture and treasury vault, costing originally approximately $45,000, is now taken in at $14,902.

The outstanding premiums at the close of business a year ago were approximately $182,000, and this year are reduced to $111,765. This computation is based on the statement of 1916. The increase in actual cash receipts from insurance premiums and interest income for 1917 by way of comparison with the year 1916, as appears in the government blue book, shows an increase of $233,965. A more extended reference to the company's statement will be made in these columns next week.

CONSOLIDATED MINING AND SMELTING COMPANY

The main achievement of the Consolidated Mining and Smelting Company for the year was the production of 10,000 tons of pure zinc of a value of $3,000,000, which event may be said to mark a definite stage in the metallurgical history of the country. The company increased its production of refined lead by 2,000 tons to 22,000 tons, doubled its capacity for the production of sulphuric acid, and made a new record by producing over $13,000,000 worth of metals.

The writing off for depreciation of plant and equipment, and development of properties was $1,028,000, against $876,000 charged against these accounts in the 1916 year, included in the charge for depreciation is $450,000 written off the zinc plant, which for a certain period was in an experimental stage.

The net profit was $1,076,828, against $996,496 in 1916. Depreciation charges were, therefore, about $162,000 more, and the increase in profits was $80,000. This is rather a better showing than the incessant labor troubles, shortage of coal and the curtailment of ore shipments gave the shareholders reason to expect. The company's net after depreciation, however, closely approximates its increased dividend requirement, the surplus after payments of $995,012 to the shareholders being $81,816. The results for the three years compare as follow:—

	1917.	1916.	1915.
Written off for depreciation	$ 648,058	$ 278,368	$ 193,140
Written off for development of properties	380,071	508,745	......
Net profits	1,076,828	996,496	795,411
Dividends	995,012	770,337	464,308
Profit and loss	2,360,274	2,278,458	2,058,200

CANADA LIFE

Net Surplus - - - - - - -	6,731,192.38	Increase	687,514.61

Above, *in brief, are the Results for 1917 as shown by the Financial Statement.*

Below, *are a few other important accomplishments during the year.*

THE CANADA LIFE IN 1917:—

1. Subscribed practically its entire revenue to the Victory Loan.
2. At the request of the Chancellor of the Exchequer of Great Britain, purchased £100,000. 0. 0. of bonds of the United Kingdom, to help Great Britain's finances.
3. Maintained an interest rate of 5.85% notwithstanding large purchases of 5½% bonds.
4. Extended the sale of Monthly Income and Business Insurance, many applications for very large amounts having been received during the year.
5. Carried out the year's operations with an important decrease in the ratio of expenditure.
6. Placed more additional insurance with existing policyholders than ever before.

CONSTRUCTION OF SHIPS PLANNED

Government Will Build Ships for Canada's Trade—Steel to be Rolled in Canada

"The government's progressive shipbuilding plan," announced the Hon. C. C. Ballantyne, minister of marine and fisheries, at Ottawa recently, "will involve the expenditure of between fifty and sixty million dollars per annum.

"The ships will be built and owned by the government, and the policy inaugurated is a policy of government ownership of ocean transports. They will be partly operated by the government, and perhaps wholly, although some may be chartered to responsible parties. After the war they will likely be used as a government-owned ocean line to co-operate with the Intercolonial and public-owned railways.

Use Yards to Utmost.

"No new shipyards will be established at present, but the present yards will be utilized to the utmost capacity. The main yards are the Vickers, Montreal; George Davies, Levis; Polson Iron Company, Toronto; Collingwood Shipbuilding Company, Port Arthur Dry Dock and Shipbuilding Company, and the yards at the Pacific coast.

"Ships now under contract for the British government will be completed. These were let by the Imperial Munitions Board, and will be completed early in the summer, and after that date Canada will undertake all construction. It is felt that as Canada provides the finances, it should exercise control.

"There will be an equitable distribution of labor between the various plants in order to secure the maximum of efficiency, and Mr. Charles Duguid, naval architect of the government, will be the technical officer in charge of the work. He designed all the more modern steamers and had years of practical experience on the Clyde and at Belfast.

To Roll Steel in Canada.

In conclusion Mr. Ballantyne announced that "steel rolling mills to make plates, will be located in Canada. Lately all steel has come from the United States, but to meet this programme mills will likely be located in connection with existing plants at Sydney, New Glasgow, Hamilton and Sault Ste. Marie.

"The present total capacity of the Canadian mills is 300,000 tons per year, which, considering Canada's population, compares favorably with the one million-ton capacity of the United States. The whole shipbuilding programme is being launched with a view to helping the world's shortage of transportation and should be an important factor in the fight against the Huns."

SHAWINIGAN WATER AND POWER COMPANY

A syndicate of United States investment bankers is offering a block of the Shawinigan Water and Power Company's 2-year 6 per cent. convertible gold notes due December 15th, 1919, at 97½ and interest, yielding 7⅜ per cent.

The following points are taken from a letter of the president of the company. This company owns or controls developed water powers of a capacitly of 330,000 horse power and furnishes electricity to more than 50 communities throughout the province of Quebec. The total population of the territory served is about 1,500,000.

These notes are convertible at 110 into stock, which has paid continuous dividends for ten years, the rate since 1915 being 7 per cent. This stock is quoted to-day at about 107, and the high price in 1916 and during each of the preceding three years, was over 140. This stock has a market value at present quotations of about $16,000,000, indicating a substantial equity above these $4,500,000 notes.

Net earnings for 1917 (two months estimated) are equal to more than 3 times the interest paid, or 2⅓ times interest for 1918, including interest on these notes. As a result of the expenditures represented by these notes, very substantial increases in net earnings for 1918 and thereafter are assured.

Mr. Arthur Worley has been appointed general manager of the North British and Mercantile Insurance Company in London.

NIAGARA FALLS CYANAMID PLANT

No Market in Canada; Products Go to Great Britain and United States

The development of manufactures from atmospheric nitrogen at Niagara Falls was the theme of an interesting address to the board of trade, Niagara Falls, Ontario, last month, by Mr. Horace Freeman, F.C.S., research chemist, American Cyanamid Company. Mr. Freeman stated that "the cyanamid process requires large amounts of cheap electrical energy for its operation and for this reason it has not been developed in England, which has no water powers, although the improvements in steam engineering and gas engine developments might yet allow of its introduction there, especially if some concerted movement should take place for the more direct development of power at the coal pit or even in the mine itself." He continued:—

"The cyanamid process is the best adapted for the conditions and requirements of North America, and was chosen after exhaustive investigation of the different processes in Europe, in 1907, by Mr. Frank S. Washburn, who went abroad with the object of securing the most attractive process in order to make a profitable market for the proposed power development in Alabama. The patent rights were purchased for this purpose in 1907 by the American Cyanamid Company.

First and Only Factory.

"The establishment of the first, and at present only factory for the fixation of atmospheric nitrogen in America or the British Empire at Niagara Falls, Canada, by this company, was due to the failure of negotiations for the development of hydro-electric power in the United States, and to the cheap power offered at that time in Canada. When in 1913 capital was obtained in London for the extension of the industry to Alabama, where it was originally intended to go, similar conditions prevailed and the Canadian plant was extended by the expenditure here of some millions of dollars. There is at present practically no market in Canada for the products of the plant, which find their way to the United States and England, chiefly at present in the form of materials for munitions of war, but its operation has been of inestimable benefit to Canada, and particularly to the community of Niagara Falls. The factory has been enlarged by additions of capital to a possible capacity of 64,000 tons of cyanamid per annum, and it is a matter of regret for ourselves, as well as for the company, that owing to the shortage of power the Hydro Commission has reduced the power available for this important manufacture of fertilizer and explosives materials.

Commenced in 1909.

"Since the commencement of operations in 1909 the American Cyanamid Company has energetically sought the maximum development of the possibilities of cyanamid in many fields and at this plant a great amount of technical work has been carried on under the direction of Dr. W. S. Landis, and the use of cyanamid has been extended into many arts. The plant is up-to-date in every respect. Its employees are better paid than those of any other similar factory, and their welfare is taken care of by a very efficient safety committee, whose endeavors have made conditions of working far better than those in the majority of chemical factories.

"The raw materials used in the manufacture of cyanamid are the atmosphere, lime and coke, and to bring them into the proper combination a plentiful supply of electric power is required.

CANADIAN NORTHERN NOTE PAYMENT

The Canadian Northern Railway paid off yesterday $1,250,000 of its secured gold notes, due on that date. This is the second note issue paid off within six weeks by the Canadian Northern Railway, a loan of $1,750,000 having been paid early in December. This is exclusive of equipment issues of the company with maturities of about $3,250,000 per year, maturing in various months made during the year, and paid out of cash resources.

Mr. Owen D. Jones has been appointed general manager of the North British and Mercantile Insurance Company in Edinburgh.

LIFE INSURANCE HELPS CREDIT

Bankers are Impressed with Its Value to Business Men

"The best thought of the age considers that life insurance is the practical solution for many of our economic ills and business failures," was the remark recently made by former President Neil D. Sills, chairman of the United States committee on the use and extension of life insurance as credit. "The whole plan of life insurance is one of mutual helpfulness conducted on a scientific basis. Credit, properly used, is man's greatest asset in business; and that credit is built on his determination and ability to pay.

"Most progressive men die owing money. A prominent banker told me a few days ago that one of the hardest parts of his work was the collection of notes from men's estates, for those notes often took the all from the widows and children, including their homes.

"Life insurance now constitutes 87 per cent. of what Americans leave at death.

"Practical experiences have in the last few years caused the business world to attach more and more value to life insurance as a basis of credit. This great plan is as yet only in its infancy; but is growing rapidly.

Financial Constructive Force.

Mr. J. Howard Ardrey, vice-president of the National Bank of Commerce, New York City, says: "Men no longer think of life insurance in terms of protection alone, but now regard it as a constructive force in commercial and financial life. It has become the basis of credit at the bank, and is the foundation of many partnership agreements. It is the means by which the profits of a firm in the days of prosperity may be hoarded up for the days of adversity. No man engaged in active business life can afford to be without life insurance, and the time is fast coming when creditors are going to require that the debtor insure his life just as he would his merchandise."

Within the last few years there has been written in America over $600,000,000 of business life insurance.

Last November the Harriman National Bank ran the following display ad. in the metropolitan papers:—

"Life Insurance a Credit Factor.—The honorable man in his will first makes provision for the payments of his just debts, and only thereafter seeks to provide for even those nearest and dearest to him. This is proper, and should be so regarded, particularly by the active business man who would leave to his family not only the material rewards of his endeavors, but that which is greater than riches—a good name. In no better way can this provision be made than by life insurance in favor of his business.

"Instances are numberless where such insurance would possibly not only have saved creditors from loss, but surviving partners from failure and family from distress. Failures in business are due in the least degree to lack of intention to pay, and in the greatest degree to inability to pay from a dozen other causes, one of which is untimely death of the individual upon whose personal activities or invested capital the business is dependent for its success.

"An important feature of business life insurance is the additional credit responsibility which it confers; it is also an asset of growing value from year to year; and, all in all, this type of insurance is so reasonable and so obviously advantageous, that it might readily be made a requirement of all commercial borrowers.

"The Harriman National Bank does not hesitate to recommend, and in many instances to demand, the protection of business insurance for its own interests as well as those of the borrower."

Banks Show Appreciation.

The Union Savings Bank of Pittsburg has opened a new department, known as the "Union Savings Insurance Club," to aid life insurance policyholders in systematically providing for their annual premium payment. This great savings bank states: "There used to be a feeling in certain quarters that life insurance companies and savings banks were direct competitors. That feeling has given place during recent years to a realization that the activities of both institutions can be welded together in a bond of mutual helpfulness, to the very great benefit of policyholders and bank depositors."

The above is only one of the many cases where banks have shown their appreciation of the value of life insurance, and indicated a practical desire to assist policyholders in carrying more. This fine co-operation on the part of banks is appreciated by the members of the National Association of Life Underwriters; and we want to in every possible way show our appreciation to our good friends—the bankers. One of the most effective ways to help is to spread the great gospel of "The Value of Life Insurance as Credit."

Business and Life Insurance.

To meet a future known loss, most bankers or business houses charge off a certain per cent. of that loss each year. Ninety-five per cent. of the element of success in any business originates in the personality of the management. The strong man or men of the business house or bank will at death become a total loss to their concerns. This loss can and should be covered by life insurance. It would cost from 2 to 5 per cent. per year, according to age, thus making a very small per cent. yearly to write off, and the total loss may come in one year.

The work of our committee is mainly educational, and we are beginning to see a general awakening all over the country among financial institutions and business men regarding the great value of life insurance as credit.

The credit forms of most of the federal reserve banks ask the amount of life insurance carried. The National Credit Men's Association recognizes the importance of this information; and now the American Bankers' Association is about to include it in its credit form blanks. All of these help greatly in the service life insurance can render to mankind. The Canadian bankers are also strong in their approval of life insurance as an aid to credit.

BRITAIN'S LOANS TO ALLIES

In Less Than Three Years of War, the Total was £1,038,000,000

Of the $340,000,000 of advances by the United Kingdom to its allies and dominions made in the five weeks to May 5th, 1917, only $20,000,000 was for the dominions, who now are in a position to finance the major part of their own war requirements. In the period to the end of March, 1917, Great Britain had advanced to allies and dominions a sum of $4,590,000,000, to which has to be added $260,000,000 due to Britain for interest, discount, etc. With the further advances made since April 1st, the indebtedness of the allies and dominions to Britain was in May raised to $5,190,000,000, of which $4,460,000,000 was on account of the allies, and $730,000,000 the dominions. As far as it is possible to ascertain, the advances made have been in pounds sterling as follows:—

Loans of United Kingdom to Allies and Dominions since War Began.

	Allies £	Dominions £	Total £
Aug. 4, '14—Mar. 31, '15.	18,000,000	44,000,000	52,000,000
Apr. 1, '15—Mar. 31, '16.	270,000,000	54,000,000	324,000,000
Apr. 1, '16—Mar. 31, '17.	540,000,000	54,000,000	594,000,000
	828,000,000	142,000,000	970,000,000
Apr. 1, '17—May 5, '17 .	64,000,000	4,000,000	68,000,000
	892,000,000	146,000,000	1,038,000,000

For the financial year 1917-1918, British loans to allies and dominions it is estimated will amount to £400,000,000, or about $1,950,000,000.

France had advanced by June to her allies or friendly nations a total of $748,000,000. Permission was then asked of the Chamber of Deputies for authority to loan an additional $412,000,000, which would bring the total advances by France up to $1,160,000,000.

The British advances to Canada are discussed elsewhere in this issue.

Mr. B. B. Cronyn has been elected vice-president and managing director of the W. R. Brock Company, the well-known drygoods house at Toronto.

LUMBER IN BRITISH COLUMBIA

Log Production was 40 Per Cent. Higher Last Year—Wooden Shipbuilding

(Staff Correspondence.)

Vancouver, Jan. 1st, 1918.

In 1916, the value of the timber products of British Columbia was $35,528,000. In 1917, the output of shingles has been just as great, with prices much in advance of those of 1916; more lumber has been manufactured, and as quality was the particular essential, the price was high; log production for the year will be about 40 per cent. higher than in 1916, with prices 75 per cent. greater—so it may safely be estimated that the total for last year will be greater than for 1916, which was the record. Lumbermen believe that it will overtop mining, which, in 1916, recorded a new high mark at $42,970,555, which last year should be as great, although strikes in coal mines have interfered with continuous operation of smelters.

Wooden Schooners Help Lumber Trade.

The building of wooden auxiliary schooners has done much to give an added activity to lumber manufacturing plants in Vancouver and Victoria. The contracts of the Canada West Navigation Company gave the industry its initial start, and many bottoms are now being built for the Imperial Munitions Board. The aggregate value of all the ships built and building last year was roundly $25,000,000. The material required in these boats is clear timber, with a price in the neighborhood of $40 per thousand feet.

The fact that ships have been built has enabled mills to ship overseas, exports of lumber having been almost stopped for a while owing to the lack of carriers. The Wallace Shipyards has launched six off its ways at North Vancouver and all are in the lumber trade. The Cameron Genoa Mills Shipbuilders, Limited, Victoria, launched the last of five on November 1st; all these being for the Canada West Navigation Company. Most of the lumber going offshore just now is for Australia, with some for South America.

Lumber Mills and Export Trade.

More lumber mills are in the export business now than ever before, and with a volume of trade offering, there does not promise to be any falling off. Worth mentioning is the shipment of lumber overseas again from Alberni Canal (Port Alberni) for the first time since the lumber industry was started in this province. The first sawmill was at Victoria, built by the Hudson's Bay Company, but the first big mill was at Alberni, when Capt. Stamp, with British capital, started to cut the fine timber there in the middle sixties, and shipped lumber foreign. It was not long after, though, before he came across to Burrard Inlet and the Hastings mill was built on the present site. The outlook now is that Port Alberni will continue to export lumber.

When the figures of shingle production for last year are available, an increase should be noted. Not only has the production of the mills been nearly up to capacity, that is about 80 per cent., the usual average, but several new large plants will have been put into operation before the year is out. Raw material has been scarce, bolts being at $9 and $10, and shingle cedar logs at $14 and $15. Shingle prices at the middle of November were: Perfection, $4.25; Eurekas, $3.40; XXXXX, $3.25; XXX, $2.55.

Shingle Exports to United States.

Exports of shingles for the first nine months of 1917 to the United States were: January, 101,702,340; February, 67,589,199; March, 96,699,482; April, 130,655,412; May, 147,178,970; June, 131,123,803; July, 96,612,658; August, 116,865,816; September, 100,587,980; October, 150,740,410.

Despite the great increase of production of the logging camps, the demand for logs is greater than the supply. For the first nine months of last year the cut was 1,072,210,445 feet, as compared with 750,091,000 feet for the corresponding period of 1916. The total cut for 1916 was 1,084,733,000 feet, so that production for the first nine months of 1917 is about the same as the whole of 1916, which was up to that time a record. November log prices were: Fir, $10, $13, $16; spruce, $10, $20, $30; cedar, $14 and $17; hemlock, $10. Camps are operating to as great a capacity as is possible with a scarcity of labor, and new camps are steadily starting up. United States loggers who have held timber for many years, are opening up some of their limits. The output for the last three months of 1917 will be large, for the weather since July 1st has been very favorable, October and November being the best months in years.

Log Production in British Columbia.

Comparative figures of log production are:—

	1916. Feet.	1917. Feet.
January	38,424,000	74,971,000
February	34,860,000	48,864,000
March	45,349,000	80,658,000
April	63,877,000	87,792,000
May	113,488,000	155,798,000
June	120,389,000	144,345,000
July	108,751,000	176,963,000
August	116,144,000	170,994,000
September	108,809,000	131,922,414
October	131,559,000	....
November	91,776,000	....
December	111,307,000	....

From the foregoing it may be noted that production of the camps started large in January, 1917, and the comparative monthly increase over 1916 has been steadily maintained. These figures are, of course, for the whole of the province, indicating that activity in the industry is general. This is also shown by the smaller lumber stocks on hand in the Kootenay and Boundary districts, less than usual, while along the line of the Grand Trunk Pacific more than a dozen new plants have come into operation during 1917. While greater profits may not be in proportion to the increase of activity, owing to the heavier cost of every article needed in production, the wide range of the industry means a large volume of general business in all parts of the province.—R. B. Bennett.

PRESENTATION TO MR. A. HOMER VIPOND

A luncheon was tendered Mr. A. Homer Vipond recently at Montreal on the occasion of his twentieth anniversary with the New York Life Insurance Company, at which a presentation of silver plate was made by the local representatives.

The chair was occupied by Mr. J. G. Pelton, the local manager, who referred in complimentary terms to Mr. Vipond's work during his twenty years' service, giving figures of the large amount of business secured during that period, which sands first amongst the company's agents of Canada. There were also present from the home office Mr. J. E. Briggs and Mr. Robert Dedell, who both spoke of the high esteem in which he was held by the home office.

Letters of congratulations were read from the president and the vice-president of the company, as well as from several officials of Canadian companies. Addresses were also delivered by several of the company's representatives in Montreal and outside points. Mr. Pelton announced that the Montreal branch had written over $4,500,000 of business during the year that has just closed.

CONTINENTAL INSURANCE COMPANY IN CANADA

In November last, the business of the Guardian Casualty Company was reinsured in British Columbia by the Continental Casualty Company, of Chicago. Under the agreement, existing accident, health and liability contracts of the Guardian Casualty and Guaranty Company were reinsured, the bulk of this business consisting of accident and health policies having an aggregate annual premium income of approximately $50,000; the balance of liability premiums amounted, roughly, to $20,000 per year. Much of the liability business was written at non-tariff rates. The Continental, however, has joined the Western Canada Casualty Underwriters' Bureau, and will renew all liability business on a tariff basis. In other words, the Continental in Canada, as in the United States, will operate strictly as a tariff company. Their operations in Canada at present are confined to British Columbia for the purpose of taking care of this reinsured business, and the company will not expand their development to other provinces until some time after February 1st, 1918.

Mr. H. G. B. Alexander is president and general manager of the Continental Guarantee Company; Mr. H. A. Behrens is vice-president; and Mr. W. H. Bettes is secretary.

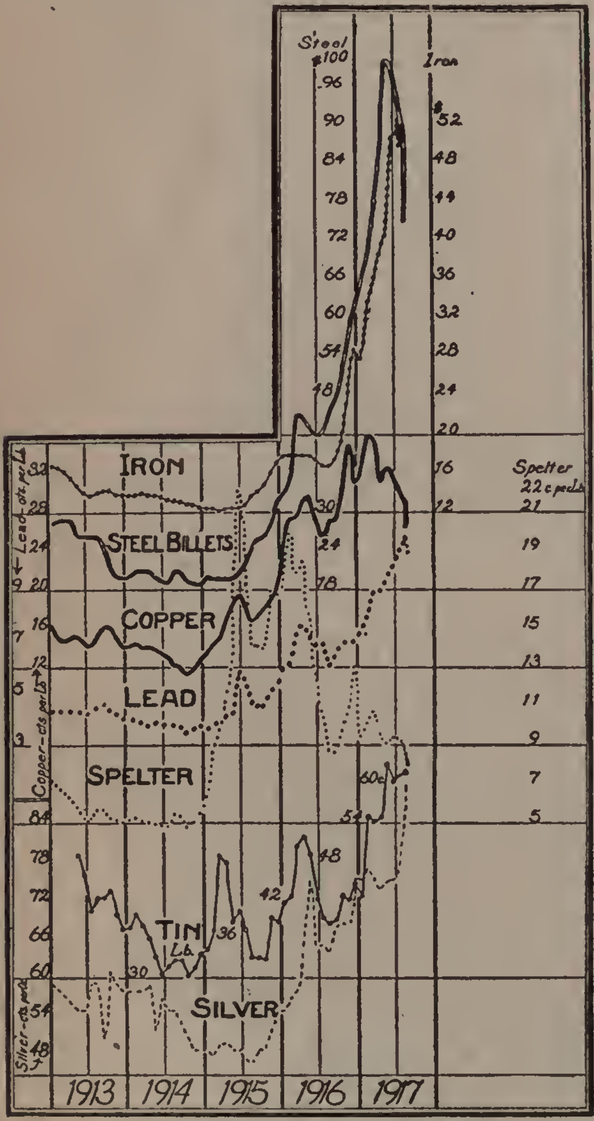
METAL PRICES HERE HIGH

Range of Prices Since 1914 Has Been Wide—Increase in Steel Production

Metal prices continued to increase last year. The accompanying chart, prepared by the Alexander Hamilton Institute, New York, shows the trend of metal prices for several years.

The production of iron in 1917 in the United States amounted to over 40,000,000 tons. A perpendicular rise in the price of coke and the higher wages caused iron producers to advance prices gradually during 1916, but most of the advance from around $13 a ton to over $50 a ton in 1917 came after it was seen that the war order business would continue for some time because the United States had entered the conflict.



How Metal Prices Have Risen.

Increase in Steel Production.

Steel production in 1916 showed an increase of 32 per cent. over 1913. The price of semi-finished steel in June last was about four times that charged three years ago, but now that the car shortage has been relieved and the prices of coal and coke fixed on a reasonable basis, steel billets can be produced at a good profit around $40 to $45 a ton, except where excessive ocean charges must be paid on imported ore.

Copper prices have advanced only about one-third as much as steel, the greater stability of copper being due partly to the fact that the copper in a shrapnel shell is saved when a gun is fired and partly because production during 1916 was fully 57 per cent. greater than in 1913.

Spelter prices increased most noticeably in 1915, but production increased so rapidly that prices have steadily declined for over a year. Indications are that the spelter output will take care of requirements.

Lead is relatively not as important in warfare as in the days of the Civil War "minnie" ball. Prices increased only gradually during 1915, and production in 1916 was nearly 35 per cent. ahead of 1913, but consumption has steadily increased, and the situation has permitted a considerable rise of price in the past year.

The following table shows the approximate extremes of prices (in round numbers) during the past three years:—

Commodity.		Price, 1914.	High war price.
Coke	ton	$2.50	$14.00
Coal, bituminous	"	1.00	6.00
Iron	"	13.50	52.90
Steel, billets	"	20.00	100.00
Copper	lb.	.12	.36
Spelter	cwt.	5.00	21.00
Lead	"	3.75	11.00
Aluminum	"	18.00	66.00

OUTLOOK IN PULP AND PAPER INDUSTRY

"The recent agreement between publishers and manufacturers in the United States, by which the price of newsprint is fixed at 3 cents a pound," say Messrs. Greenshields and Company, in their December monthly review, "is satisfactory to the pulp and paper industry of Canada. Some mills have been securing a slightly higher price for their exports. On the whole, 3 cents represents a fair average, and a concession from the higher price obtained by some mills is offset by the removal of an uncertainty of long standing and of the possibility that the fixed price presently in force in Canada, namely, 2½ cents, would be used as a leverage to force a like price in the United States. The arrangement of a price of 2½ cents in Canada will expire January 20th, and there is a reasonable prospect that an upward revision will be ordered then. The agreement in the United States is to extend until April 1st, and in the interval a new inquiry into mill costs will be made by the federal trade commission.

"The manufacturers have the right, however, to appeal to the United States circuit court against any decision given by the commission—an important point. This is the only industry so far granted this privilege. In view of the admission at the Canadian inquiry that the manufacturers had established a sound case in their argument for a 3-cents-a-pound basis, the present position is not likely to be disturbed by the new investigation. If it is finally established as the price for the duration of the war, it is believed that the Canadian pulp and paper industry will have before it a long period of satisfactory prosperity.

"The many uncertainties of the past year as to what would be the effect of government interference have checked the normal growth of the newsprint industry. A few new paper machines have been installed in existing plants in Canada, and new enterprises have been started, and the actual increase in Canadian production has been nominal. With an unrestricted market, quite another situation might have been created. High prices inevitably having over-production as a natural sequel, made it important, from the manufacturers' standpoint, that, disturbing as has been the policy of government regulation, the danger of over-production has been avoided in the past year and is minimized for the immediate future.

"At 3 cents a pound, established companies will enjoy satisfactory profits; but under existing conditions, with labor and construction costs likely to continue high for a long period, the incentive to new enterprise is lacking. Many months ago, the publishers' policy in invoking government interference with the law of supply and demand was short-sighted. The opinion, it is believed, is justified by the present situation. With an unrestricted market, the price of newsprint would have gone much higher for a short time. That would have stimulated the building of new mills and brought about a condition of over-production which would have been as favorable to the publishers as unfavorable to the mills."

Service for Women

IN the management of property and the investment of money, women often find themselves handicapped by inexperience. Mistrusting their own judgment, they appeal to friends for financial guidance. Such a course is not safe nor businesslike.

Insure your property against mismanagement, and relieve yourself of worry by enlisting the services of this company. You will receive the benefit of experience gained in the management of many estates, both large and small.

Our office will be glad to explain—by letter or interview—about the making of your will or any matters regarding a trust or banking business.

LIFE INSURANCE LEGISLATION

Differences in Provincial Legislation Affecting Life Insurance Contracts in Canada

BY WILLIAM B. TAYLOR, B.A., LL.B.

I.

There is considerable variation in the legislation in the different provinces of Canada affecting life insurance contracts, but while this is the case, looking more closely into the legislation there is great similarity, and we find that the different provinces, with the exception of the province of Quebec, have largely followed the province of Ontario in connection with life insurance legislation, and especially that part referring to insurance for the benefit of wives and children. For the convenience of companies, we have included the colony of Newfoundland.

It is over fifty years since the first legislation on the subject was passed in the province of Ontario, and, after many amendments and changes from time to time, the subject is now very fully covered in the statute book of that province.

Uniformity of law is desirable where a company is operating through a country like Canada, which is sub-divided into many provinces, but the difficulties experienced here are very slight when we compare them with those which are experienced in the United States where there are 46 states, in each of which there is some change or modification affecting the subject which is to be constantly kept in mind in dealing with these contracts.

In the United States.

In the United States the power of the state legislature over property and civil rights is supreme, and the Federal government only has such powers as are specially delegated to it by the constitution. Insurance, not being one of these delegated matters, is therefore under the control entirely of the state governments. Attempt has been made at different times in the United States, by the superintendents of insurance in some of the states, to make the legislation in the different states more uniform, but this has not been very successful except in regard to the regulations affecting the companies in their dealings with the insurance department, and it has not been effective in passing a uniform legislation affecting the contracts and the beneficiaries.

Under Canadian legislation, by the British North America Act, certain subjects are specially placed under the control of the parliament of Canada, and the better opinions seem to treat the subject of insurance as one which comes under the control of the provincial authorities rather than under the parliament of Canada, and especially that portion of the subject which affects the policy contract, the beneficiary, and the assignment or transfer of an interest in the policy. In Canada the provinces are given exclusive power of legislation over property and civil rights within the province, and it is for this reason that insurance contracts appear to fall under the control of provincial legislation. The parliament of Canada has certain legislative power over a company which is incorporated by it, and, under this jurisdiction, the parliament of Canada has passed an insurance act which imposes certain regulations on the companies incorporated thereunder, or by separate act of Dominion incorporation. The subject of insurance is not declared to be exclusively within the jurisdiction of the parliament of Canada, and an insurance company may be incorporated under the insurance act of the parliament of Canada, or, if intending to operate in one province only, it may be incorporated under a provincial charter. It may also apply to another province for license to do business and may be licensed to operate there.

For Ready Reference.

The following summary is intended to show the differences in insurance legislation as now in force in the different provinces of Canada, and in order to render the statement useful for ready reference the subject is placed under the headings which most frequently come up for consideration in practice. Where the provision in one province affecting the matter is exactly similar to that of another province the alphabetical index letter placed at the beginning of the paragraph refers to the provision in the province of Ontario, and the repetition of the letter in other provinces indicates that the same provision applies in that province as in Ontario:—

Relating to Contracts of Insurance Generally.

Ontario.

A. Where the insured is domiciled or resident in Ontario, the contract of insurance if signed, countersigned, issued, delivered, or mailed there or handed to any agent for delivery, is deemed to be an Ontario contract and construed according to the law of Ontario and payable therein. 2 Geo. V. Chap. 33, 1912 (S. 155, 1).

B. All conditions of the contract are required to be set out in the policy or by writing attached thereto when issued in order to be effective. Sec. 156 (1).

C. Erroneous statements in the application shall not void the contract unless material thereto.

D. Copy of the application must be furnished the insured upon request. S. 157 (1).

E. Where the policy is delivered and the premium has not been paid the contract is nevertheless binding on the company. Sec. 159 (1).

F. Where a premium is paid by cheque or promissory note which is not honored at maturity, the contract at the option of the company may be treated as void.

Manitoba.

A. Where the insured resides in the province the moneys payable shall be paid therein. R.S.M. Chap. 98 (1913), Sec. 47.

Saskatchewan.

A. Similar provision as in Ontario respecting the effect of domicile and payment of moneys under contracts.

B. Similar provision under this heading as in Ontario. Chap. 15 (1915), Sec. 193.

C. Provision is similar to Ontario.

D. Same provision as in Ontario.

Alberta.

A. Moneys payable under policies issued or to be issued by insurance corporations now or hereafter licensed in the province shall be payable therein when the insured is or dies domiciled therein.

British Columbia.

A. No statutory provisions.

Quebec.

C. Misrepresentation or concealment either by error or design of a fact or nature that affects the risk is a cause of nullity. C.C., 2487.

New Brunswick.

A. Same as Ontario.
B. Same as Ontario.
C. Same as Ontario.

Nova Scotia.

A. Same as Ontario.
B. Same as Ontario.
C. Same as Ontario.

Prince Edward Island.

A. Similar to Ontario but providing that the status of the beneficiary shall be determined according to the law of P.E.I., Chap 16, Sec. 4 (1), 1906.
B. Same as Ontario.
C. Same as Ontario.

Newfoundland.

A. Same as Ontario.
B. Same as Ontario.
C. Same as Ontario.

(To be Continued.)

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the week ended January 4th:—

Dominion Reduction Company, 88,000; Buffalo Mines, 88,090; O'Brien Mine, 65,617; Penn Canadian Mine, 62,858; Nipissing Mine, 175,077; Coniagas Mines, 264,000. Total, 743,642 pounds, or 371 tons.

Lieutenant-Colonel Henry Brock has been elected president of the W. R. Brock Company, Toronto.

GOLD PRODUCTION WAS LARGE

War Has Had Little Adverse Effect on Output—Canada's Record—Where Gold is Mined

The production of gold in Canada last year was probably the largest for 15 years. Official figures are not yet available, but mining has been active and the output in 1917 will likely be as large, if not larger, than in the previous year. According to the preliminary report issued by Mr. John McLeish, chief of the division of mineral resources and statistics, Dominion department of mines, last fall (the latest official figures available) the gold production for 1916 was the largest since 1902, amounting to 926,923 fine ounces, valued at $19,162,025, an increase of 1 per cent. over 1915. Of this production the Hollinger Consolidated Mines contributed about 48 per cent. and the Dome about 21 per cent.

The report shows that Ontario has been since 1914 the largest gold-producing province of Canada. For 1916 the production was 489,679 fine ounces, valued at $10,122,563, being 52.8 per cent. of the total production for Canada and an increase of 20.4 per cent. over that of 1915 and 82 per cent. over the 1914 production.

Of the total 1916 production $4,957,663 or 26 per cent. were derived from placer and alluvial mining; $10,472,723 or 54 per cent. in bullion and refined gold and $3,731,639 or 20 per cent., contained in matte, blister copper, residues and ores exported.

Production of Other Provinces.

The production in Nova Scotia was about $103,359, a decrease of 24.4 per cent. from that of 1915, and was due to the water shortage which interfered seriously with the operations of the hydro-electric plants.

The production in Quebec is derived from the pyrites ores of the Eastern Townships. The gold content of these ores is very low, and apart from a very small recovery of alluvial gold in Alberta no production is recorded from this province nor from Manitoba, or Saskatchewan.

The production in British Columbia was $4,520,868, as against $5,651,184 in 1915, a decrease of 20 per cent.; this total includes $575,000 estimated by the provincial mineralogist as being the output of placer mining, and $3,945.000 recovered from milling and smelting operations.

The production from the Yukon Territory amounted to $4,391,669, as against $4,750,450 in 1915, a decrease of 7.5 per cent., and was derived from the alluvial deposits with the exception of about $9,000 which was produced from the gold and copper ores of White Horse and the silver-lead ores of the Silver King mine near Mayo.

The exports of gold-bearing dust, nuggets, gold in ore, etc., in 1916, are reported by the customs department as $18,382,903.

World's Gold Production.

The total production of gold in the world in 1916 amounted to $470,442,068, according to the Engineering and Mining Journal of New York. This was less than that of 1915 by $8,110,154, or 1.7 per cent.; but it exceeded that of 1914 by $10,344,640, or 2.2 per cent. The most important gain shown in 1916, as compared with 1915, was of about $6,000,000 in the Transvaal; but this was offset by decreases of $8,720,000 in the United States and $6,980,000 in Australasia. Apparently the war has had little direct effect on gold production, most of the producing countries being out of the direct track of the conflict.

The accompanying table gives the value of the gold won in the world for the three years, 1914-16 inclusive. The figures give the value in dollars of the fine gold reported in each case:—

	1916.	1915.	1914.
Transvaal	$192,138,770	$186,105,890	$173,176,166
Rhodesia	18,957,310	18,892,959	17,745,980
West Africa	7,861,210	8.521,682	8,671,371
Madagascar, etc.	1,905,000	1.865,000	1,980,000
Total Africa	$220,862,290	$215.385,531	$201,573,484
United States	92,315,363	101.035,700	94,531,800
Mexico	14,150,000	14.950,000	18,185.000
Canada	19,162,025	18,977,901	15,925,044
Central America	3,605,000	3,575.000	3,500.000
Total North America	$129,232.388	$138.538,601	$132.141,844
Russia, including Siberia	$ 34,750,000	$ 35,150,000	$ 34,458,088
France	950,000	1,025,000	1,450,000
Other Europe	1,580,000	1,675,000	2,350,000
Total Europe	$ 37,285,000	$ 37,850,000	$ 38,258,088
British India	11,184,062	11,484,169	12,327,980
British and Dutch East Indies	4,960,000	4,825,000	4,690,000
Japan and Chosen	7,980,000	7,850,000	7,476,500
China and others	3,750,000	3,675,000	3,625,000
Total Asia, not including Siberia	$ 27,874,062	$ 27,834,169	$ 28,119,480
South America	13,975,000	13,750,000	13,525,000
Australasia	38,213,328	45,193,921	46,479,532
Total for the world	$470,442,068	$478,552,222	$460,097,428

Twenty Years' Record.

The total gold production of the world for 20 years past is given in the next table. As already noted, the total for 1916 was less than that of 1915; but it was greater than that of any preceding year, except 1912. It was nearly twice that of 1897, or 20 years ago:—

1897	$237,833,984	1907	$411,294,458
1898	287,327,833	1908	443,434,527
1899	311,505,947	1909	459,927,482
1900	258,829,703	1910	454,213,649
1901	210,877,429	1911	459,377,300
1902	298,812,493	1912	474,333,268
1903	329,475,401	1913	462,669,658
1904	349,088,293	1914	460,097,428
1905	378,411,054	1915	478,552,222
1906	405,551,022	1916	470,442,068

NORTHERN MANITOBA

In 1912, the boundaries of Manitoba were extended to the north and northeast, adding an area of 178,000 square miles, which gives the province a total area of 251,832 square miles. The north boundary was extended to the 60th parallel, which is the line of the north boundary of the provinces of Alberta and Saskatchewan. It extends to the eastern shore of Hudson Bay. The eastern boundary of the added section extends from the northeast angle of Old Manitoba, northeast to where it intercepts the southern shore of Hudson Bay in longitude 89 degrees.

The vast added territory commonly known as Northern Manitoba or New Manitoba, with its hundreds of miles of ocean frontage on Hudson Bay, has remained to this day but little known to the white man. In the earliest days it was the exclusive preserve of the fur traders and trappers.

Traders and missionaries and a few government surveyors and other official explorers have hitherto been practically the only source of information regarding the characteristics and possibilities of this enormous country. The Manitoba government has just issued an interesting booklet in regard to the country. Its object is to present in summarized forms as much as possible of the information available.

The building of the Hudson's Bay Railway from The Pas to Port Nelson is nearing completion. The length of the railway will be 424 miles.

Recent discoveries of minerals north of The Pas are attracting a great deal of attention to this new country. Details of these discoveries and of the development work to date are given in this booklet. Those who know the country best are agreed that only the edge of the mineral resources of Northern Manitoba has been touched as yet and predict that if prospecting is continued and means of transportation opened up, the mineral development will become very great.

Other resources also await only the opening up of the country. There is much valuable timber and pulp wood, the lakes and streams are reported to be stocked with many kinds of fish, and there are vast tracts of fertile soil. Generally speaking the climate is not much different from the settled parts of the province. The booklet will well repay a careful perusal.

DIVIDENDS AND NOTICES

DOMINION TEXTILE COMPANY, LIMITED

NOTICE OF DIVIDEND

A dividend of one and three-quarters per cent. (1¾%) on the Preferred Stock of the DOMINION TEXTILE COMPANY, LIMITED, has been declared for the quarter ending 31ST DECEMBER, 1917, payable JANUARY 15TH, 1918, to shareholders of record December 31st.

By order of the Board.

JAS. H. WEBB,
Secretary-Treasurer.

Montreal, 20th December, 1917.

THE CANADIAN FAIRBANKS-MORSE COMPANY, LIMITED

PREFERRED DIVIDEND NO. 25

Notice is hereby given that a semi-annual dividend of 3 per cent. (3%) on the preferred stock of this company has been declared due and payable on this fifteenth day of January, 1918, to preference shareholders of record at the close of business, Monday, December 31st, 1917. The transfer books will not be closed.

By order of the Board.

T. M. CULLEN,
Assistant Secretary.

THE MERCHANTS BANK OF CANADA

QUARTERLY DIVIDEND

Notice is hereby given that a dividend of Two and one-half per cent. for the current quarter, being at the rate of Ten per cent. per annum, upon the Paid-up Capital Stock of this Institution, has been declared, and will be payable at its Banking House in this city and at its Branches, on and after the 1st day of February next to Shareholders of record at the close of business on the 15th day of January.

By order of the Board.

D. C. MACAROW,
General Manager.

Montreal, 28th December, 1917.

NOVA SCOTIA STEEL AND COAL COMPANY, LIMITED

DIVIDEND NOTICE

A dividend of two and one-half per cent. of the Ordinary Shares of the Company has been declared payable on January 15th, 1918, to Shareholders of record of December 31st, 1917.

By order of the Directors,

THOMAS GREEN,
Cashier.

New Glasgow, Nova Scotia, December 24th, 1917.

NOVA SCOTIA STEEL AND COAL COMPANY, LIMITED

DIVIDEND NOTICE

A dividend of two per cent. of the Preferred Shares of the Company for the quarter ending December 31st, 1917, has been declared payable on January 15th, 1918, to Shareholders of record of December 31st, 1917.

By order of the Directors,

THOMAS GREEN,
Cashier.

New Glasgow, Nova Scotia, December 24th, 1917.

MARCUS LOEW'S THEATRES, LIMITED

Notice is hereby given that a dividend of 1½ per cent. for the quarter ending 31st December, 1917, being at the rate of seven per cent. per annum, on the Preference and Common shares of Marcus Loew's Theatres, Limited, has been declared payable on 15th January, 1918, to shareholders of record on 31st December, 1917.

By order of the Board.

SAMUEL D. FOWLER,
Secretary.

Toronto, 31st December, 1917.

CONDENSED ADVERTISEMENTS

"Positions Wanted," 2c. per word; all other condensed advertisements, 4c. per word, Minimum charge for any condensed advertisement, 50c. per insertion. All condensed advertisements must conform to usual style. Condensed advertisements, on account of the very low rates charged for them, are payable in advance; 50 per cent extra if charged.

THE STORY OF A YOUNG FINANCIAL MAN'S SUCCESS.—A financial man, thirty-three years of age, came to our office four years ago to take up a new line of business—a line against which he had been prejudiced, but which he knew carried great rewards for the successful. His average commissions this year will be over $5,000.00, and he has built up a future income of over $3,000.00 a year on business already written. We are enlarging our organization to prepare for an enormous expansion of business during the next few years. We have positions for two good men with successful records. This offer will be open during the next week. Only applicants of unquestioned integrity and with the highest references will be considered. W. A. Peace, Manager Toronto Branch, Imperial Life Assurance Company, 20 Victoria Street, Toronto.

MOOSE JAW RENTAL AGENTS.—The Ralph Manley Agency, Limited, Walter Scott Block, Moose Jaw, handle the renting of Moose Jaw Improved City Property. Their facilities permit them to rent and re-rent property as well as looking after collections and any necessary repairs. Established 1908. Correspondence solicited.

AGENT WANTED for Toronto for strong, Tariff, Fire Insurance Company. Liberal contract and sole Agency to the right party. Apply Box 137, *The Monetary Times*, Toronto.

PUBLIC ACCOUNTANT is desirous of relinquishing practice on own account and joining the staff of a good live concern; chartered secretary of joint-stock companies, capable, experienced manager and systematizer, married, not eligible for military service; can arrange to transfer practice instanta if necessary. Box 139, *The Monetary Times*, Toronto.

CANADIAN GOODS IN TRANSIT VIA UNITED STATES

The War Trade Board at Washington has advised the Department of Trade and Commerce, Ottawa, that commodities passing through the United States in transit and not for consumption in that country do not require an import license.

All United States' collectors of customs have these instructions, and there should be no delay as to any goods coming within that category.

Creation of a war trade board to do for Canada what a commission similar in character is already doing for the United States is being strongly urged upon the government by the Canadian Manufacturers' Association. A deputation of manufacturers will wait upon Sir Robert Borden in connection with the matter as soon as he returns to the capital.

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

The following table, compiled by *The Monetary Times*, shows the volume of bank loans to municipalities since January, 1914, to November, 1917:—

	1914.	1915.	1916.	1917.
January	$29,301,620	$35,952,805	$32,015,371	$24,487,272
February	30,372,854	38,437,903	35,149,915	26,121,324
March	31,890,843	41,227,449	38,649,462	29,877,911
April	30,168,812	43,031,360	44,371,050	35,931,996
May	33,689,577	43,948,436	43,924,036	39,790,191
June	37,260,571	46,889,816	46,773,032	42,757,673
July	36,372,334	44,029,446	42,385,096	43,989,207
August	39,664,534	46,020,730	39,882,811	43,940,176
September ..	44,338,873	43,928,331	38,708,745	42,721,563
October	47,316,076	45,682,230	37,613,530	41,204,781
November ...	44,706,055	41,064,550	32,945,963	36,459,598
December ...	38,256,947	30,878,028	24,056,797	....

Gloucester, N.B.—The county reports the assessed value of real estate and personal property as follows:—Real estate, $3,107,963; personal property, $412,332.

St. John, N.B.—D. G. Lingley, chamberlain, reports the city's assessed value of real estate and personal property as follows:—Real estate, $21,346,000; personal property, $11,507,500.

Lethbridge, Alta.—Local improvement 6 per cent. debentures of $70,312 will be sold to install an electrical turbo-generator, electric light equipment, and for engineering and superintendence.

Quebec, Que.—A temporary loan has been arranged with the Bank of Montreal for $79,000 to retire a bond issue falling due in January. As soon as authority is secured from the legislature the loan will be permanently financed.

Fort William, Ont.—An application will be made for a special act validating and confirming a by-law to raise the sum of $225,000 by way of debentures for the purpose of taking care of deficits in connection with the city's electric street railway at the next session of the Ontario legislature.

New Westminster, B.C.—In 1915, in order to finish some local improvement work, the city issued about $750,000 three-year treasury certificates on the security of $330,000 unsold debentures. These certificates mature next August. Recently City Treasurer Gilchrist went to Portland to ascertain whether the present holders, the Lumbermen's Trust Company, would be likely to renew for three years.

Moncton, N.B.—F. A. McCully, secretary board of school trustees, submits the following report for the year 1916:—The total assets are $214,189, consisting of real estate, $188,000; plant and movable property, $12,538; sinking fund, $6,101; cash in banks, $7,550. The liabilities are:—Debentures afloat per list, $187,500; owe banks, $4,789; making a total of $192,289; giving the assets excess over liabilities by $21,900.

St. George, N.B.—John C. O'Brien, town clerk, submits the following report for the year 1916:—The total valuation on property and income, $379,835. Rate per $100, $1.88. The assets are:—School building and grounds, $8,200; school furniture, $500; town hall, $1,600; fire engine, etc., $400; cash on hand and in Bank of Nova Scotia, December 31st, $4,577.45; making a total of $15,277.45. The total liabilities are $3,000.

Maisonneuve, Que.—A proposition was made recently for an extension with the holders of $800,000 of 6 per cent. debentures issued in 1915 and due January 1st. Between now and the first of May the financial necessities of the municipality at the western end of Montreal will aggregate pretty close to five millions. There are some more maturities besides which there are unsold debentures to be taken into the calculation. The proposition made concerning the $800,000 maturity is for an extension of time for two years. The holders of the bonds are asked to exchange them for an issue due on January 1st, 1920, by which time it is hoped the war will be over and financing less difficult. The municipality agrees to pay the bondholders a bonus of 2 per cent. of the par value of the bonds deposited. It is agreed that if the city fails to comply with the conditions on or before March 15th, the rights will lapse and the bonds deposited returned to their owners.

Saskatchewan.—The following is a list of authorizations granted by the local government board, December 17th to 21st, 1917:—

School Districts.—Davidson, $2,000 20-years not ex 8 per cent. annuity. F. S. T. Hutchison, Davidson.

Rural Telephone Companies.—Baljennie, $9,200 15-years not ex. 8 per cent. annuity. J. W. Rayner, Baljennie.

Rural Municipality of Scott, $6,000 15-years not ex 8 per cent. instalment. J. M. Scott, Yellow Grass.

The following is a list of debentures reported sold from December 17th to 21st, 1917:—

School Districts.—Osgoode, $1,200; town of Biggar sinking funds. Six Mile Lake, $1,800, Lamb Hill, $2,000; Goldman & Company, Regina.

Rural Telephone Companies.—South Gravelbourg, $7,300; Western Canada Bond Corporation, Winnipeg. Anglia, $11,500; Wood, Gundy & Company, Saskatoon.

Villages.—Esterhazy, $1,000; Jos. Lomenda, Esterhazy.

UNITED STATES CROPS

The December estimates of the crop reporting board of the United States Bureau of Crop Estimates of the acreage, production, and value (based on prices paid to farmers on December 1) of important farm crops of the United States in 1917, with the average for the five years 1911-1915, based on the reports of the correspondents and agents of the bureau, are as follow:—

Crop.	Acreage.	Production.	Farm value December 1.
Corn	119,755,000	3,159,494,000	$4,053,672,000
Winter wheat	27,430,000	418,070,000	848,372,000
Spring wheat	18,511,000	232,758,000	459,046,000
All wheat	45,941,000	650,828,000	1,307,418,000
Oats	43,572,000	1,587,286,000	1,061,427,000
Barley	8,835,000	208,975,000	237,539,000
Rye	4,102,000	60,145,000	100,025,000
Buckwheat	1,006,000	17,460,000	27,954,000
Flaxseed	1,809,000	8,473,000	25,148,000
Rice	964,000	36,278,000	68,717,000
Potatoes	4,390,000	442,536,000	543,865,000

N. B.—Production of tobacco and hops, in pounds; cotton, in pounds (per acre); hay, sugar beets, and cabbage, in tons; apples and cranberries, in barrels; oranges, in boxes; other products, in bushels of weight.

Approximately $2,000,000 were realized by British Columbia trappers last season, according to figures tabulated by Provincial Game Warden Bryan Williams, who based his calculations on the returns made by the 947 of the 1,161 licensed trappers who have filled out and returned the forms demanded by law. These show a total fur value of $300,000, to which must be added $100,000 worth of coyote pelts, which come in under a separate heading in the classification. All licensed trappers are whites, but as there are at least six unlicensed Indian line runners for every white man, Mr. Williams is confident that his estimate of $2,000,000 is well within the mark.

UNION BANK OF CANADA

Deposits of the Union Bank of Canada show an increase and the net earnings are the highest on record. Total assets of the bank are $143,411,927, an advance on previous years. Liquid assets exceed $77,000,000; gold coin and Dominion notes amounting to over twenty millions. During the year dividends were paid at the rate of nine per cent., 8 and a bonus of 1, as has been the custom for several years. Mr. Galt, president of the bank, announced at the annual meeting held at Winnipeg this week that in future the shares would be definitely on a nine per cent. basis and that the dividends would be 2¼ per cent. per quarter. A further reference will be made to the statement in these columns next week.

Mr. A. Hitchcock, of Moose Jaw, and Mr. A. H. Malcom, of Vancouver, were chosen as additional directors. Mr. John Galt, president, in the course of his address, intimated that the bank would eventually be represented in each of the provinces, in which it does a substantial business.

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental lines for December, 1917:—

Canadian Pacific Railway.

	1916.	1917.	Inc. or dec.
December 7	$3,139,000	$3,280,000	+ $150,000
December 14	3,106,000	2,908,000	— 198,000
December 21	2,979,000	3,051,000	+ 72,000
December 31	3,065,000	3,679,000	+ 614,000

Grand Trunk Railway.

December 7	$1,151,306	$1,218,138	+ $ 66,832
December 14	1,203,868	1,040,349	— 163,519
December 21	1,164,962	1,355,105	+ 190,143
December 31	1,760,109	2,040,966	+ 280,857

Canadian Northern Railway.

December 7	$ 917,900	$ 916,000	— $ 1,900
December 14	892,600	753,800	— 138,800
December 21	805,700	738,300	— 67,400
December 31	869,200	865,100	— 4,100

EAGLE-STAR INSURANCE AMALGAMATION

The Eagle and British Dominions Insurance Company and the Star Assurance Company have been amalgamated, the former concern absorbing the business of the latter.

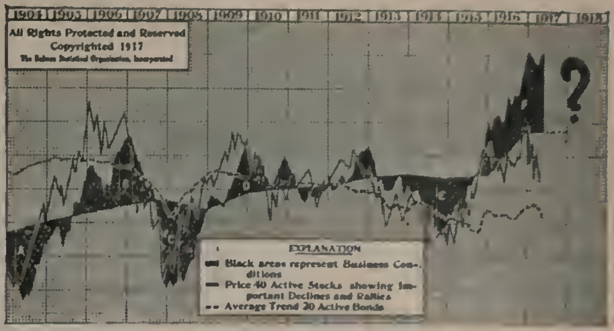
The Star has been transacting life insurance business in Canada since 1868, and at December 31st, 1916, had $224,141.67 business in force in this country. Its assets in Canada totalled $170,452.35, and its liabilities, $120,187.12. Its income in 1916 was $14,272.27, and its expenditure, $21,607.65. It has not been actively prosecuting its business in this country for a number of years.

The British Dominions has been transacting fire insurance business under Dominion license since July 22nd, 1915, prior to which it operated under provincial license for a number of years. Its total assets in Canada at December 31st, 1916, were $218,107.42, and its total liabilities, $94,781.20. Its income in 1916 was $97,375.39, and its expenditure, $101,096.51.

The Eagle and British Dominions has had a Canadian branch, with headquarters at Montreal, in charge of Messrs. Dale and Company, Limited, Canadian managers, a well-known underwriting firm.

Under the amalgamation, the goodwill of the Star was transferred absolutely to the British Dominions; the uncalled capital of the Star was not transferred at all; the other assets were transferred, and were called the Star fund. They were transferred to the British Dominions, as trustees, the trust to satisfy the Star policy liabilities, and any balance after satisfying these liabilities to belong to the British Dominions. The Star policyholders have their fund as security, and, in addition, they got the liability of the British Dominions in the event of that fund being insufficient, the British Dominions having an uncalled liability of nearly £2,000,000.

The new company will be known as the Eagle Star and British Dominions.



What's Coming?

Babson's investment bulletin, just off press, carefully analyses

"The Outlook for 1918"

It discusses the extraordinary conditions of the stock and bond market here and abroad.

This bulletin is of vital interest to investors and bankers, to whom it will be sent free.

Largest Organization of its Character in the World

A SQUARE DEAL IN LIFE ASSURANCE

"First in the Northwest."

Do YOU know anything about "loadings" ? ? ?

When the average Life Assurance Actuary figures out your premium he first finds the "net" premium, then adds to it a percentage called a "loading" to provide for expenses.

This method has been condemned by world famous actuaries for over half a century.

The Northwestern is the only Canadian Life Company that uses a scientific method of providing for expenses, and this results in

LOWER PREMIUMS

Write for our circular entitled "Life Assurance Rates" exposing the unsound methods generally followed and justifying our claim to be

Canada's only scientific Life Company.

The Northwestern provides the highest reserves of any Canadian Company.

The Northwestern Life
Assurance Company
WINNIPEG CANADA

CANADA'S STEEL PRODUCTION

It was 42 Per Cent. Greater During First Half of Past Year—Fixed Prices

The total production of steel ingots and direct castings in Canada in the first six months of 1917 amounted to 836,149 short tons, an increase of 246,596 tons, or 42 per cent., over the corresponding period of 1916. Average monthly production was 139,858, against 98,259 in the first half of 1916, and 106,268 tons for the full year, 1916. A new high record in output was reached in May, 155,346 tons, but the June figures showed a decline of about 18,000 tons.

The figures as compiled by the mines branch of the department of mines at Ottawa cover the entire output of the country with the exception of two small plants. Pig iron output, as estimated by the mines department from returns covering all producers, was 586,998 short tons, as against 562,097 in the first six months of 1916. The average monthly production was 97,833 tons, or only slightly higher than the average for the full year, 1916, which was 97,438 tons.

Imports from the United States have been on a considerably larger scale. The total imports of steel ingots and direct castings for the first six months of the year totalled 139,640 short tons, against 47,493 in the same period in 1916; in pig iron the increase was from 29,801 tons last year, to 38,858 tons this year. Production figures in short tons by months last year are as given as follows:—

	Pig iron.	Steel ingots, etc.
January	89,187	130,990
February	83,801	120,629
March	103,789	152,420
April	101,504	139,669
May	108,799	155,346
June	99,858	137,095

President Fixes Steel Prices.

The president of the United States approved in September an agreement between the war industries board and the steel men, fixing the following prices, which became effective immediately, and were subject to revision January 1, 1918:—

Commodity.	Basis.	Price agreed upon.	Recent price.	Reduction. Amount.	%
Iron ore	Lower Lake Ports	*$ 5.05	*$ 5.05	....	....
Coke	Connellsville	†6.00	†16.00	$10.00	62.5
Pig iron		*33.00	*58.00	25.00	43.1
Steel bars	Pittsburgh Chicago	‡2.90	‡5.50	2.60	47.3
Shapes	Pittsburgh Chicago	‡3.00	‡6.00	3.00	50.0
Plates	Pittsburgh Chicago	‡3.25	‡11.00	7.75	70.5

*Gross tons. †Net tons. ‡Hundredweight.

It was stipulated, first, that there should be no reduction in the present rate of wages; second, that the prices above named should be made to the public and to the Allies, as well as to the government; and third, that the steel men pledge themselves to exert every effort necessary to keep up the production to the maximum of the past, so long as the war lasts.

Measures were taken by the war industries board for placing orders and supervising the output of the steel mills in such manner as to facilitate and expedite the requirements of the government and its allies for war purposes, and to supply the needs of the public according to their public importance and in the best interest of all as far as practicable.

Fixed Prices and Averages.

The following table shows a comparison of the fixed prices with average prices from 1901 to 1916 in the United States, the prices being given in gross tons (2,240 pounds):—

Year.	Ship plates.	Steel beams.	Steel bars.
Fixed price	$72.80	$67.20	$64.96
1916	79.18	57.04	59.73
1915	29.34	29.12	29.34
1914	25.53	25.76	25.76
1913	33.60	35.39	34.72
1912	29.79	29.57	28.90
1911	29.25	29.34	28.22
1910	32.60	32.92	32.03
1909	31.70	31.58	29.56
1908	36.84	36.73	33.15
1907	38.08	38.08	35.84
1906	35.84	38.08	35.39
1905	35.61	35.28	35.39
1904	34.52	34.49	29.56
1903	35.84	36.84	34.94
1902	35.84	35.38	37.40
1901	34.87	35.39	32.92

Here is an interesting comparison. Bars, shapes and plates are figured by the hundredweight, coke by the net ton, and ore and pig iron by the gross ton:—

	Fixed price.	Former price.	% of reduction.	High, 1916.	High, 1915.
Iron ore	$ 5.50	$ 5.50	....	$ 5.05	$ 3.55
Pig iron	33.00	50.00	34.0	30.00	17.50
Steel bars	2.90	4.00	27.5	3.00	1.84
Shapes	3.00	4.00	25.0	3.25	1.78
Plates	3.25	8.00	58.7	4.25	2.04
Coke	6.00	12.50	52.0	8.37	2.64

Underwriters were interested in a cable despatch recently regarding the absorption by the London Assurance of the British Law Fire Insurance Company, of London. The latter company, although having a volume of fire business comparatively small, say, $600,000, as compared with the London's $4,000,000, is, nevertheless, a desirable acquisition for the London, because the business of the British Law consists almost altogether of buildings understood to have been secured by their agents, who, as a rule, are the family lawyers representing the estate owning the buildings.

"GREAT AMERICAN" APPOINTS GENERAL AGENTS

The Great American Insurance Company of New York have appointed Messrs. Pemberton and Son, Vancouver, general agents in British Columbia. This company is one of the strong and enterprising companies of the United States.

GOVERNMENT WILL ASSIST PROVINCIAL FINANCING

Sir Thomas White has arranged to assist the provincial governments in their financing this year, according to Ottawa advices. With the United States in the war, and the British and New York financial markets closed to Canada, the Dominion has now to be completely self-supporting from a financial standpoint. A number of the governments have obligations maturing in the United States for which the money must be found in Canada.

In order to relieve this congestion in the Canadian market, which might otherwise happen with large provincial and municipal offerings, Sir Thomas has arranged to assist in meeting the obligations maturing in the United States.

This plan will diminish the amounts of provincial securities to be thrown in the market and will make the situation better for other Canadian securities. When later, market conditions improve and securities are more in demand, provincial issues may be made and the advances by the Dominion repaid.

YIELD ON INVESTMENTS IN STOCKS AND BONDS

The following table of investment yields of stocks and bonds is compiled for *The Monetary Times* by Messrs. Morrow and Jellett, members, Toronto Stock Exchange, 103 Bay Street, Toronto:—

A proposal for the Dominion government to take over the port of St. John, make it a Dominion property, and place it under a commission similar to the Harbor Commission at Montreal, has been considered by some of the members of the Dominion government. Hon. F. B. Carvell is taking the matter up with the Dominion cabinet.

THESE BONDS ARE LOST

The following certificates of the third Canadian war loan have been lost:—

No. E14023	$1,000
E14024	1,000
E14025	1,000
E14026	1,000
E14027	1,000

CANADA LIFE ASSURANCE COMPANY

An exceptionally strong report was presented by Mr. H. C. Cox, president, at the annual meeting of the Canada Life Assurance Company at Toronto this week. The meeting was attended by a large number of policyholders and branch managers. Mr. Cox reviewed the company's remarkable progress during its 71 years' career and noted the excellent results of the past year. The report showed assurances issued during 1917, including revivals of $367,665, amounting to $23,542,464. This is the largest amount ever issued by the company in one year, and exceeds the business issued in 1916 by $3,018,420. The new policies paid for exclusive of bonus additions, were $21,368,943, which represents an increase of $2,331,797 over the corresponding figures of the previous year. The total assurances in force are $183,016,760, there having been an increase of $13,051,956 during the year, after providing for death claims, maturing endowments and other terminations.

The premium income, new and renewal, after deducting payments made to other companies for reassurances, amounted to $6,016,099, the considerations for annuities to $201,977; the interest income, including profits realized on the sale of securities, $3,329,517, and income from other sources $23,397. The total income was $9,570,991, an increase over that of 1916 of $733,098. The payments during the year to policyholders and their representatives, and to annuitants, in settlement of death claims, matured endowments, dividends, cash values for policies surrendered, and annuities, amounted to $4,340,963. In this sum are included death claims due to the war of $570,238.

In accordance with the conditions of their contracts, loans were made to a number of the policyholders, but these loans, which total $9,222,925, increased in the past three years by only $194,443, while the increase in assurances in force in the same period has been $25,609,589.

The total assets, which amount to $62,580,336, show an increase for the year of $3,341,153. The greater proportion of this increase has been invested in government bonds. A careful revaluation and adjustment has been made of the securities in conformity with the unusually low market prices prevailing at the end of the year and it is felt that, when conditions are again normal, these investments will show a marked appreciation in value. The policy reserves, under the same stringent method of valuation as in past years, on December 31st amounted to $52,562,478, an increase of $2,466,241 over the corresponding reserves of 1916.

The president stated that the mortality amongst the regular body of policyholders had been exceedingly favorable and although the death claims due to the war were included, the total represented only about 75 per cent. of what was expected and provided for.

The dividend to policyholders has been maintained at the present rate, it having been felt that the general progress of the company and the savings in expense and otherwise warranted this. As a measure of additional precaution $100,000 was added to the contingent fund, making this $500,000. This is intended as a special fund for war contingencies, or any abnormal conditions which require to be offset, although up to the present no apparent need has developed requiring the apportionment of any of these funds.

The outstanding features of the report were the increases made in premium income, interest income, assurances paid for, surplus, assets, assurance in force, policyholders' reserves and payments to policyholders. There were decreases in lapses of policies, war claims and expenses. The Canada Life presented the best report in its history.

The company is in a strong position and is a credit to Canadian business and finance.

SHAWINIGAN WATER AND POWER COMPANY

A block of $1,500,000 two-year 6 per cent. convertible gold notes of the Shawinigan Water and Power Company will be offered to the shareholders of the company at a price of 97½. The offering is part of a total issue of $4,500,000, of which $3,000,000 has been sold to a group of American bankers and already placed in the United States.

This offering is the first issue of new securities by a corporation to receive the consent of the minister of finance under the recent order in council restricting new issues in the interests of the general financial situation.

Subscription to the $1,500,000 notes of the Canadian end of the $4,500,000 issue will be offered to Shawinigan shareholders of record January 14th. Shareholders will have until March 1st to signify their intention as to whether they will take up their share which will be pro rata with stock holdings. The issued capital stock of Shawinigan is $15,000,000, so $1,000 notes will be offered to the holder of 100 shares of stock. On March 1st a first instalment of 50 per cent. of the subscription will be due; the balance and accrued interest will fall due on April 1st. The notes are convertible into stock at the rate of $110 in notes for $100 of stock.

MATURING OBLIGATIONS

The New York Times publishes a list of maturing obligations in 1918 amounting to $669,943,772, divided as follows:—Railroads, $259,775,238; public utilities, $214,661,089, and industrial and miscellaneous, $105,507,454.

Many of the maturing obligations have already been arranged for either through refunding issues held in the treasuries of the various companies, or, because of the disturbed conditions in the investment markets, through short-term securities, mainly in the form of note issues. Among the maturing issues in which Canadians are interested are $750,000 Winnipeg Electric Railway notes due this week; $3,500,000 Detroit United 5 per cent. collateral notes, due in May; $3,000,000 on 6 per cent. Canadian Northern gold notes, due in July; $9,733,333 5 per cent. sterling notes of the Canadian Northern Railway; $2,000,000 Grand Trunk Railway of Canada 5 per cent. two-year gold notes, due in August; $10,000,000 Canadian Northern Railway collateral trust 6 per cent. notes, and $1,750,000 one-year notes, due in September; $10,000,000 Grand Trunk Railway of Canada 5 per cent. notes; $2,500,000 5 per cent. notes of the Shawinigan Water & Power Company, due in October; $750,000 Toronto Railway one-year 6 per cent. gold notes; $2,500,000 Canadian Consolidated Rubber Company 5 per cent. debenture notes, due in December.

PUBLICATIONS RECEIVED

Calendar.—Bank of Hamilton, Hamilton, Ont.

Sugar.—The World's Sugar Supply; its Sources and Distribution. Issued by National Bank of Commerce in New York.

Calendar.—Issued by the Government Printing Bureau. Mr. Fred. Cook, Assistant King's Printer and Controller of Stationery, Ottawa.

Railroad Bonds.—Messrs. Spencer Trask and Company, New York, have just issued a circular describing 15 selected railroad bonds which they classify as high grade, conservative investment, and semi-investment. In view of the recent action of the United States government in taking over control of the railroads, this circular is of special interest to investors contemplating the purchase of railroad bonds.

Reference.—Heaton's fourteenth annual edition for 1918, published by Heaton's Agency. It contains a complete interesting list of titled and decorated Canadians which the war has swelled to several pages, and under the heading of "Commerce," an interesting compilation of the pre-war imports from enemy countries into Canada, which will be a useful guide to firms considering the establishment of a new industry in the Dominion. At the end of the book a new section under the heading of "Colonization," gives some very interesting and valuable information, giving for each province land available for farming; fruit farming; cattle and sheep ranching, etc.; Crown land regulations; financial assistance of farmers by provincial and Dominion governments; special provisions for returned soldiers, etc. The first part of the book contains the Official Directory; Postal Information; Shipper's Guide; Commercial Regulations; Railway and Steamship Guide and the Customs Tariff. In the last half is a complete up-to-date summary of the resources of the provinces including Agriculture; Canals and Waterways; Commerce; Education; Finance; Fisheries; Forests; Fur Farming; Mining; Water Powers, etc. This is followed by the Official Boards of Trade Register giving complete descriptions of every commercial town in Canada with its industrial opportunities. References are given throughout the text to a section entitled, "Where to Find It." This contains a guide to the more important Dominion and Provincial Government reports and standard publications from which all available information on any subject can be obtained. Cross references are given to this section throughout the text. Heaton's Annual is found in all the leading business offices.

CANADIANS AND THEIR LOAN SUBSCRIPTIONS

Some interesting facts and figures, regarding our loans, were noted by Mr. W. G. Gooderham, president of the Bank of Toronto, at the annual meeting of the bank this week.

"Although the Dominion has, since the outbreak of war, increased her funded debt to a very large extent," he said, "it is a matter for congratulation that Canadians themselves have become the holders of so large an amount of government securities. On the 30th November, 1917, the amounts of war loans that were outstanding in connection with loans issued in Canada since the beginning of the war were as follows:—

War Loan maturing 1925	$ 93,926,100
War Loan maturing 1931	106,706,300
War Loan maturing 1937	141,903,600

"War savings certificates have been sold amounting to $11,912,300. The people of Canada have, therefore, by purchase of bonds and war savings certificates, provided about $350,000,000. To this must now be added the subscriptions to the Victory Loan, which reached a total of $418,000,000, from about 800,000 subscribers. The amount of these subscriptions which will be allotted has not yet been definitely announced.

"The result of the recent campaign for subscriptions to Victory Loan bonds is a striking evidence of what can be accomplished by intensive cultivation of the financial field. When it is remembered that shortly after the outbreak of war, when Commissioners from France and Great Britain were negotiating with bankers in the United States for an Anglo-French loan, based upon the joint obligations of these two countries, it was with some hesitancy that so large an issue as $500,000,000 was presented to the people of the United States, it is creditable to the people of Canada that after having responded to every previous call by our government they should have again responded to the appeal made to them and sent in subscriptions of $418,000,000. Great credit must be given to the leaders and workers of the canvassing organization who brought about so gratifying a result, and great tribute must also be paid to the people of Canada for their patriotic response.

"In additions to loans thus provided by public subscriptions, the banks of Canada have, from time to time, made advances to the Imperial government, and quite recently opened a credit to that government, through the Wheat Export Company, of $100,000,000 for the purchase of grain, and a further sum of $80,000,000 has been placed at the disposal of their representatives for the purchase of cheese, bacon, and other foodstuffs.

"While the result of the successful campaign for the Victory Loan, with its large number of subscribers, will be to temporarily reduce the amount of the savings deposits that have accumulated in the banks, yet we believe that the distribution of these bonds to such a large number of our people will, in the long run, have a most beneficial effect, and the impetus that has been given to habits of thrift and saving will be of immense advantage to individuals and also to the nation. Another result that will follow from this campaign will be that orders will be placed in this country for supplies in the form of foodstuffs, munitions, clothing, and other necessary war requirements, that will enable manufacturers and others to carry on production on a scale that should ensure a continuance of the prosperity we are now enjoying."

NEW INCORPORATIONS

Several Large Companies Chartered During Past Few Weeks

The largest companies incorporated during the past two weeks were:—

Nickel Lake Mining Company, Limited (no personal liability), Fort Frances, Ont., $1,000,000; Maritime Wrecking and Salvage Company, Limited, Montreal, Que., $1,000,000; Colborne Trading and Transportation Company, Limited, Montreal, Que., $2,000,000; St. Lawrence Shipbuilding and Steel Company, Limited, Sorel, Que., $1,000,000; Three Stars Silver Mines, Limited, Toronto, Ont., $3,000,000; Co-operative Shipping Company, Limited, Montreal, Que., $1,000,000; Canadian Co-operative Marine Corporation Company, Limited, Montreal, Que., $1,000,000; Great West Coal Company, Limited, Brandon, Man., $2,000,000; Union Collieries, Limited, Montreal, Que., $1,000,000; Canadian Kodak Company, Limited, Toronto, Ont., $5,000,000; Utility Securities and Realties, Limited, Montreal, Que., $1,000,000; Realties, Limited, Montreal, Que., $2,000,000.

The following is a partial list of charters granted during the past two weeks in Canada. The head office of the company is situated in the town or city mentioned at the beginning of the paragraph. The amount named is the authorized capital, and the persons named are provisional directors:—

Fernie, B.C.—Northern Club and Cafe Company, Limited, $10,000.

Victoria, B.C.—The Victoria Business Institute, Limited, $25,000.

Kelowna, B.C.—The Ballard Hotel Company, Limited, $10,000.

Courtenay, B.C.—The Gwilt Lumber Company, Limited, $25,000.

Seymour District, B.C.—Hillcrest Lumber Company, Limited, $50,000.

Vulcan, Alta.—The Vulcan Farmers' Oil Company, Limited, $20,000.

Shaunavon, Alta.—The Barr Springate Lumber Company, Limited, $100,000.

Maria, Que.—J. F. Guite, Limited, $49,000; J. E. Guite, J. A. Guite, C. F. X. Guite.

Saskatoon, Sask.—Nat Bell Liquors, Limited, $5,000. N. Bell, W. Sugarman, G. H. Yule.

Kenora, Ont.—Superior Liquor Company, Limited, $45,000. R. C. McPherson, R. W. Killey.

Winnipeg, Man.—Cotter Brothers, Limited, $50,000. T. Cotter, D. H. Chisholm, E. M. Cotter.

Ottawa, Ont.—Producers Dairy, Limited, $200,000; W. F. Argue, F. Finlayson, J. L. Gillespie.

Georgetown, Ont.—Canada Needle Works, Limited, $50,000. F. A. Harley, R. I. Creelman, L. A. Cook.

Edmonton, Alta.—Graham and Reid, Limited, $25,000; City and Farm Lands Company, Limited, $20,000.

Brandon, Man.—Great West Coal Company, Limited, $2,000,000; E. Spice, H. E. Swift, R. W. Campbell.

Pontiac, Que.—The Portage-du-Fort Milling Company, Limited, $30,000; G. Dagg, J. E. Dolan, E. Beaman.

Guelph, Ont.—The Modern Paper Box Company, Limited, $100,000. J. P. Hale, W. L. Clark, W. R. MacKenzie.

Dunham, Que.—Longue Pointe Land Company, Limited, $48,000; C. M. Cotton, F. T. Enright, H. C. Mariotti.

Walkerville, Ont.—Beaver Truck and Tractors, Limited, $500,000; E. P. Brownell, C. J. Stodgell, H. P. Crocker.

Upper Bedford, Que.—The Torrington Company, Limited, $150,000; W. R. L. Shanks, G. Bush, G. R. Drennan.

Hartland, N.B.—Hartland Manufacturing Company, Limited, $24,900; H. H. Hatfield, F. G. Scott, R. W. Cameron.

Sorel, Que.—St. Lawrence Shipbuilding and Steel Company, Limited, $1,000,000. P. Bercovitch, E. Lafontaine, N. Gordon.

Dauphin, Man.—The Dauphin Milling and Creamery Company, Limited, $125,000; S. Code, F. Gostick, D. R. Richardson.

Calgary, Alta.—Archibald and Company, Limited, $10,000; the Mouat-Eoll Company, Limited, $50,000; Apartments, Limited, $25,000.

Fort Frances, Ont.—Nickel Lake Mining Company, Limited (no personal liability), $1,000,000; A. A. Macdonald, E. M. Miller, K. Donahue.

Winnipeg, Man.—Gibson Paterson Company, Limited, $40,000; W. J. Donovan, T. E. Paterson, R. M. Gibson. The Rideau Stock Farm, Limited, $20,000; E. B. Reynolds, W. H. Hammell, J. B. Hugg.

Vancouver, B.C.—Pacific Galvanizing Company, Limited, $10,000; Lead Products, Limited, $100,000; Nimpkish Timber Company, Limited, $500,000; British Columbia Woolen Mills, Limited, $100,000; McAllister Spring Company, Limited, $25,000; Empire Brewing Company, Limited, $10,000; R. G. Bedlington and Company, Limited, $25,000; Merrill-Ring-Moore Company, Limited, $150,000; Richmond Arts, Limited, $10,000; D. E. Brown's Travel Bureau, Limited, $25,000; McTavish Fisheries, Limited, $25,000; Banfield, Gunther and Black, Limited, $10,000.

Toronto, Ont.—Capreol-Hamner Lands, Limited, $50,000; G. Ruel, R. H. Temple, A. J. Reid. Toronto Hardware Manufacturing Company, Limited, $400,000; A. W. Langmuir, W. A. J. Case, W. M. Smith. Canadian Kodak Company, Limited, $5,000,000; J. F. Boland, J. C. German, M. E. Cherrier. Three Stars Silver Mines, Limited, $3,000,000; A. L. Reid, A. M. Borthwick, C. H. Leggott. Chipman Canada, Limited, $50,000; W. W. Skinner, W. G. Pugsley, G. G. Hyde. Utility Securities and Realties, Limited, $1,000,000; W. K. McKeown, L. C. Herdman, G. E. Chart. Union Collieries, Limited, $1,000,000; E. M. McDougall, S. C. Demers, L. G. Bell. H. Gray and Company, Limited, $150,000; E. E. Howard, J. DeWitt, H. E. Rose.

DIVIDEND FOR FLOUR MILLS COMPANY

The St. Lawrence Flour Mills Company, Limited, which started dividends on the common stock with a declaration of 1¾ per cent. three months ago, has declared the same quarterly payment, with a bonus of 1 per cent. The 2¾ per cent. will be paid on February 1st to shareholders of record January 20th.

PROVINCIAL BANK RESULTS

The annual report of the Provincial Bank of Canada for the 12 months ended December 31, 1917, shows profits of $207,483, compared with $203,983 in 1916. The four dividends aggregated $70,000 and war tax $10,000, both items corresponding to similar amounts paid in 1916. There was written off bank premises $23,500, compared with $16,000 the previous year. There was set aside for provision against contingencies the sum of $40,000. Contributions to the Patriotic Fund totalled $6,500; reserve for pension fund, $5,000, and there was $50,000 transferred to reserve fund.

COLLECTION BY DRAFT

Most Common and Advantageous for Home Use as Well as Foreign

In the November issue of the Foreign Trade Bulletin, issued by the Foreign Trade Information Bureau of the American Express Company, 65 Broadway, New York, the subject of collecting foreign drafts is covered as follows:—

"Undoubtedly the most commonly used process for making collections against shipments of United States products going abroad is an arrangement whereby the exporter draws a draft upon the purchaser. By this means neither the exporter nor the purchaser need tie up their capital, but, by combining their signatures, can jointly obtain the credit facilities which are advantageous to both parties.

"In a great many cases, however, shippers prefer not to offer these drafts for sale to the banks which handle them, but, after having made them out for an amount sufficient to cover exchange, interest and all other charges, turn them over to their banker for collection. Under these circumstances, payment is not made by the United States banker until the proceeds have been received from his foreign correspondent.

"This does not necessarily mean that the standing of the shipper makes it inadvisable for the bank to purchase his bills of exchange. On the contrary, it may be that the discount rates are unfavorable, and the exporter, having ample funds, prefers to wait for the returns after collection abroad. Or, again, it frequently happens that the consignee is unknown and the shipper does not wish to discount his draft with his bank, when he feels uncertain that it will be taken care of at the other end, thereby possibly incurring expensive protest fees and other charges.

"In other instances, shippers arrange with consignees to allow them to take delivery of the underlying merchandise in part lots, making pro-rata payments, and, therefore, it is preferable not to sell the draft, but to have returns made for each part lot as delivered.

Adoption of Method.

"Once having decided to adopt this 'collection' method, it is important that instructions given with the drafts sent for collection should be full and complete. For example, in India and other eastern countries, and occasionally in Europe, documents accompanying the draft are always delivered 'against payment,' if definite instructions are lacking. On the other hand, in some countries of South America shipping documents are not held by the bank, once a time draft has been accepted. Therefore, it is advisable for the exporter to include in his letter to the banker a statement as to whether documents are to be given up 'against acceptance' or 'against payment.'

"Furthermore, the instructions should outline whether the draft is to be protested in case of non-acceptance or non-payment, and whether advices of non-payment are to be made by mail or cable.

"If such advices are received, the exporter will find that his banker usually is in a position to look after his interests in numerous ways. For example, new instructions often are given to clear and store the goods, pending their re-sale to someone else in the same foreign city. This is of great importance in many South American countries, where clearance must be effected within a limited time after the arrival of the shipment, or else heavy penalties are incurred. Or, if non-payment is due to temporary financial difficulties of the purchaser, the collecting bank, upon receipt of new authority, is in position to obtain full satisfaction by using the instalment plan. Allowing payment of one-third of the draft in thirty, sixty or ninety days has been successfully applied in cases which have appeared to be hopeless at first. Or again, if the shipment is valuable, instructions may be given to reforward it to another nearby market, or even to return it to the United States.

Return of Funds by Cable.

"In many cases, shippers request that return of their funds should be made by cable. It should be noted that when this procedure is adopted for obtaining funds from drafts drawn in United States dollars, interest has to be deducted from the face amount of the draft for the approximate time for mail advices to reach this country. This is due to the fact that payment at the cable transfer rate cannot be enforced abroad, and the drawee, if he insists, may legally pay at the cheque rate on New York.

"Next comes the question as to who is to pay the collection charges, these being nominal sums levied upon a graduated scale and based upon the face amount of the draft. The answer depends entirely upon the conditions previously agreed upon between the seller and the buyer. If such charges are to be assumed by the purchaser of the goods, the clause 'payable with all collection charges' should be added to the draft.

"In the absence of any previous agreement as to the payment of such charges, exporters should remember that the laws of many foreign countries, particularly in South America, make it impossible for the banker to collect more than the amount for which the bill is drawn.

"Quite frequently, the above clause is used without the consent of the purchaser, and the collecting bank has the alternative of declining to receive payment altogether or of waiving all claim to the charges. If they are waived, the banker does so because he believes it to be against the exporter's interest to refuse the face amount of the draft, and naturally will look to the exporter to refund him for his services to the extent that he was entitled to collect from the drawee."

IMPERIAL LIFE ASSURANCE COMPANY

The annual meeting of the Imperial Life Assurance Company has become one of the notable financial gatherings of the year. The meeting was held at Toronto this week, and in addition to the company's directors, head office executives, branch managers and field men, the presidents and general managers of several other Canadian life insurance companies were present. The addresses at the meeting gave an excellent idea of the strength of the company and of the esprit de corps permeating the institution, and which in no small measure is responsible for the rapid progress made by the Imperial Life during the past few years especially. Mr. G. A. Morrow, the president, presented a splendid review of business conditions, a document which should be widely circulated.

The directors' report showed the new assurances issued and assurances revived in the year amounted to $13,087,584, establishing a new high record and exceeding the best previous record—that of the preceding year—by $2,580,264. The gain made is assurance in force was also the greatest in the history of the company, being $8,278,209, and bringing the total assurances up to $63,362,339. The cash income from premiums was $2,272,278.87, from interest $862,674.07, and from other sources $92.37, making the total cash income $3,135,046.21—an increase of $462,866.95 over the corresponding income of 1916. The benefits paid to policyholders, comprising death losses, matured endowments, profits, etc., amounted to $1,030,392.09, exceeding by $380,282.46 the payments made to policyholders in the previous year. The ordinary death losses of the year were 47 per cent. of the normal table mortality. Claims due to the war brought the death losses up to 78 per cent. of the normal table mortality. The total death rate, therefore, notwithstanding losses due to the war, was still well within the ordinary provision contained in the premiums and reserves.

The total assets of the company were increased during the year by $1,309,428.87 and at the end of the year amounted to $14,283,845.89. The sum of $1,330,739.83, constituting nearly the whole of the funds available for new investments in the year, was placed in Dominion government loans. Our bonds and debentures are carried out in the statement at an amount well within the valuation as at the 31st December, 1917, authorized by the government for life companies' investments. The average rate of interest earned on all invested funds was 6.72 per cent., showing, therefore, that a substantial margin for security and surplus exists above the policy valuation rate of 3 per cent.

After providing for all policy liabilities on the strong basis just stated, and for payments of surplus due in the year to policyholders amounting to $107,601.00, the policyholders' net surplus fund was increased by $143,366.25 and now amounts to $2,001,820.23. The company's directors, shareholders, staff and policyholders have every reason to be satisfied with the year's results, the company's standing, and the outlook for business.

National Inventory of Industrial Organization

NECESSITY *for Inquiring Into a Range of Important Subjects is Suggested—Relation of Monopolies to High Prices—Canadian Combines Act Said to Be of Doubtful Utility—The Advantages of Combination—How to Foster Foreign Trade—The Antagonism Between Labor and Capital; the Dangerous Tendency Towards Socialism.*

By **W. T. JACKMAN, M.A.**

IT has become the custom in business, a custom which has been recognized as a virtual necessity, for each establishment to take, at least once a year, an inventory of stock on hand and to make up statements showing the condition of the business and the profits or losses which have accrued during that period. In this way, and in no other, is it possible for the management to know what lines of activity have been most successful, what changes need to be made in the character of the service undertaken or the personnel of departments, and, generally, to adjust its methods of operation toward securing the largest measure of success. There are some concerns which never take such an inventory, nor make out any periodical financial statements; but those establishments which have attained to any importance in the commercial or industrial world find it impossible to continue their work without regularly taking stock of their affairs.

As a condition of securing credit at the bank, a business house is normally required to show its latest balance sheet or statement of affairs, when requested by the bank, as a guarantee that the business is being conducted upon a safe and economical basis. If such an establishment wishes the services of the banks and desires to stand well in the business world, it must eliminate all objectionable or shady practices and do its business in the open; it must keep as far removed as possible from doubtful methods and not "tread the borderland dim 'twixt vice and virtue"

What we have said concerning an individual business, is true likewise of the collective industries of the nation; and the government which is entrusted with the conduct of the nation's affairs should regularly take a national inventory of its stock-in-trade and the methods of doing business which are sanctioned by it. Business men are compelled to carry on their work under the circumstances which are largely made *for* them, not *by* them; and it is the duty of the government so to direct and control the fundamentals of business life that the mercantile and industrial classes may have the most favorable environment for the conduct of their work. To direct trade and industry that there may be the greatest degree of freedom and initiative consistent with the largest amount of public benefit, should be the aim of the government in all its departments; and until both these aspects of advantage are secured there is room for amelioration.

The work of the Conservation Commission of the Dominion shows us great resources which are to be developed and utilized. We have, as a result of the services of that body, a fairly complete and adequate knowledge of such resources as they have investigated; and the activities of certain other governmental bureaus have shown us that our mineral wealth and water power facilities are of paramount importance. Of nickel alone, 80 per cent. of the world's needs comes from the Sudbury district, and the supplies of gold, silver, coal, iron ore, etc., are attracting attention by their richness and profusion. During 1917 we have been noting our progress in these and other lines in the fifty years since Confederation, and this half century shows a period of great natural expansion and development, a time of increasing strength and prodigious increase of wealth.

With such a heritage in nature's bounty and the development of capitalism upon a great scale, it would be strange indeed if there were not in this development some excrescences which indicate unhealthy growth in some directions. In the utilization of such abundant natural assets, the tendency is to enhance private interests to the greatest degree; and sometimes public welfare has been subjugated to private emolument. It must be acknowledged that individual enterprise and ability have met with many barriers and it was appropriate that they should have correspondingly ample remuneration when the results attained have been given constructive effect. But the recent disclosures in a few instances have attested the fact that the public welfare has suffered in the enrichment of certain individuals. Has the balance of advantages from the unfolding of our industrial and commercial structure accrued to the promotion of the general well-being in the most substantial manner possible, or have private interests secured the largest share of these advantages? The answer cannot be given until we have made a critical examination of the methods and results under the present régime. As already noted, we have ample information of the natural resources of the country, but we have little information, and most of it unorganized, as to the methods pursued by those whose business activities, in employing these resources and forwarding them from one stage to another, bring them into vital relation to the consuming population

As a consequence, there is the necessity for inquiring into a range of subjects upon which there is scant knowledge but much conjecture. Even those who are elected to positions in our legislative halls are woefully deficient in their knowledge concerning the businesses affected by their legislative measures. One has but to read the discussions in the House at Ottawa or at any of the provincial deliberative assemblies to see how erroneous and defective are many of the so-called statements of fact. Such assertions, made, perhaps, in good faith but upon insufficient evidence, cannot be contradicted by others, because the latter are equally in the dark. Observation in a particular locality is made to furnish "facts," for which there is no substantiation as general statements; and in other instances, the suppositions of one of the people's representatives in parliament are given on the floor of the House and are made to have the appearance of truth, when in reality the facts are unknown.

The same lack of definite knowledge and the prevalence of surmisings is manifested by assertions in the daily press and on the public platforms of the country, until people are fed upon the "knowledge" that is too often nothing but chance guesses, or at least, mere possibilities. Some of our most carefully edited technical journals, like *The Monetary Times*, are doing their utmost to provide information that is authentic, but they are seriously handicapped by the fact that the detached information given out by private concerns gives nothing but a brief financial note as to the assets and liabilities of the company or a reference to some forthcoming or outstanding issue of bonds or stock. It is evident, therefore, that we have profound need of a full investigation of our trade methods and of the financial practices and relations of the corporations doing business in this country.

Encouragement of Enterprise.

We need this, in the first place, to give us accurate knowledge of what the commercial and industrial conditions are in Canada, as a basis of forming correct judgments. Industry has become organized into larger and larger units, and these units have found it advisable, from their own financial point of view, to ally themselves in a great variety of ways with other units, thus building up great consolidations of enterprise or community of interests. These have proved to be very advantageous to the concerns thus linked together, but has the public derived its share, or indeed any share, from the economies of these increasingly large-scale enterprises? If private interests alone have been served and the community has not profited from these advances, it behoves us diligently to inquire into a state of things under which the great mass of the people are exploited for the profit of a few. On the other hand, if the consuming public has derived advantages commensurate with those of the business entrepreneurs, the more encouragement that is given to these advances the better.

At present, we have but insufficient data upon which to base a sound conclusion; and it depends chiefly upon mental attitude, not upon supported and buttressed evidence, whether one assails or accepts the present régime of business life. The development of our water powers, mines and other natural endowments may be carried out by private individuals or corporations for private gain, or, while giving reasonable returns to those who bring out this wealth, these forces of nature may also be used for the general advancement of the public welfare. For which purpose are they now used? An answer cannot be given until a faithful survey has been made of the entire situation.

The man who gains a million dollars and adds ten millions to the country's wealth is much more desirable than the man who gains a million dollars at the expense of the country's or his fellow citizens' welfare. In the one case, we have a productive worker whose activities contribute to the welfare of all others in equal or greater proportion than to his own wealth. For the services of such a man or group of men the community can afford to give ample remuneration. In the other instance, the profiteering business concern may leave the community the poorer for its presence there; it may accumulate vast wealth, but the advantage to the community may be insignificant or even negative. The payment for such services can be ill afforded.

Conduct of Business.

A business may be so conducted that the managers of it are continually bringing forward new goods which enrich the social life of the country or giving old goods at lower cost on account of improvements in the processes of manufacture or economies of sale. Or, on the other hand, a business may build itself up and become strong financially by merely taking the ideas of others and interposing barriers to their advancement while confirming its own position by the attempted ruin of others in the same line. How much of the present-day business is of the former class and how much of the latter we have no means of knowing, until more adequate information is given us of the commercial practice. The words of an eminent economist and a keen and thoughtful observer of public affairs are to the effect that "a large part of what is ordinarily called 'business' must be placed under the ban," as being unprofitable for the public good. Of course, we do not mean that much of the business is carried on illegally, but that much of the activity of certain classes is predatory or parasitic and does not conduce to the common good.

It is not intended by such a proposed investigation to reveal to the public or to competitors the foundations upon which a particular business has been established, such as the formulæ of drug concerns, the composition of special articles of manufacture, or, generally, the inside information necessary to the continuance of the business. No government would authorize the publication of such things unless for the protection of its citizens. But this protection should be accorded to the populace with reference to those things which are detrimental to the physical or moral life.

We hear also a great deal said, especially under the existing conditions of the high cost of living, as to the evils of monopoly in enhancing the prices of certain commodities; and not a few are found, especally those with socialistic tendencies or those who foment trouble among the laboring classes, railing at the industrial system as the builder of monopolies, through which certain persons have become very wealthy by the extortionate prices charged for their products. It must be acknowledged that monopolies have the power of oppressing the people unless they are restrained in the exercise of their possibilities. But we have no precise knowledge in regard to Canadian industry as to how far monopolistic conditions prevail in any line.

It is true that since the beginning of the century, and especially in the years 1909-1912, there was a vast movement of consolidation by which large-scale enterprise became prominent throughout the Dominion; but there is a great difference between large-scale enterprise and monopoly, although the former invariably tends toward the latter. What proportion of these concerns are still under the regulative influence of competition and what proportion has emerged into the class of virtual monopolies, we have no means of knowing at present. In certain industries it seems as if competition has ceased, since the prices charged by one establishment are the same as those charged by others in the same line; but we have no information as to whether this is simply a temporary price determination as the result of the organization of a pool or whether it is permanent as the outcome of the merging of formerly competing interests.

Intolerable Competition.

Another reason why there should be such a survey of industrial and trade conditions is to bring to light those practices which are regarded as unfair in the competitive struggle. So great have these become in the United States that one of the most renowed merchants in that country has recently declared that the competition which prevails in large-scale business has become almost intolerable. The practices of which he and many others complain may not be so rampant in Canada, but we are safe in saying that much the same conditions exist in the two countries.

In its latest annual report, the Federal Trade Commission has listed twenty-two unfair methods of competition, among which are included such things as false labelling and advertising, use of coupons, simulation of slogans, use of leaders, cutting off competitors' supplies and credit, bribery and enticement of employees, use of bogus independents, increasing prices of raw materials, inducing breach of contract, institution of malicious and vexatious suits, use of same or similar trade name or trade marks, conspiracy to injure competitors, espionage, exclusive dealing contracts, defamation of name and goods, refusal to accept advertising, intimidation, threats, boycotts, etc. Such practices tend to drive competitors out of the field and to build up into strong concerns those which are able to dominate and impose their will upon others.

Inquiry among business men who are thoroughly responsible and endeavoring to be honest with themselves and others shows that practically the same methods are in use here, as are found in the neighboring republic. Much litigation has been necessary there in the last twelve years in order to correct abuses which were tolerated until they became a public menace, and there has been much waste of funds in carrying on protracted lawsuits in the higher courts, which might have been avoided had the results of such unfair methods been foreseen. A carefully conducted investigation of such things in Canada at the present time would show us the hidden dangers and pitfalls that lurk in the pathway of progress and would enable us to profit by the mistakes and experience of other countries. Prevention, rather than correction, should be our aim.

Relations of Corporations.

The financial relations or inter-relations of the large corporations should also be a subject of careful inquiry. Is the practice of intercorporate holdings of stock carried to such an extent that corporations are thereby compelled to work together in harmony of policy? Are the banks large holders of stock in industrial or railway enterprises, so that, while furnishing great advances of capital or credit, they are enabled to control the policy and command the business of these enterprises? Are our manufacturing establishments, in some cases, able, through ownership of blocks of stock, to secure from those concerns which furnish them their raw material, prices which are lower than those charged to other manufacturing companies which have no such stock control or influence? Or, have we a number of groups of companies, each of which has its member companies united into a compact and harmonious organization through the system of interlocking directorates, so that if one is threatened with restriction or obstructive measures all the others of that group rally to its aid?

Are any of our banks so closely affiliated with some concerns in this way that the latter are able to secure better terms in borrowing than others which are not thus associated? Do the financial institutions of the country use their great power for building up the strength and expanding the power of a coterie of their favorite companies, while directly or indirectly refusing to grant similar aid to other companies, simply because the latter do not belong to their organization of related companies? Or, again, how far are the great industrial establishments integrated with others above or below them in the scale of forwarding the process of manufacture from raw material to finished product?

How great is the control exercised by manufacturers over the distributive agencies for their products? Are the selling organizations part of the manufacturing concerns, or are they entirely separate from them? If separate, does the manufacturer in any case exercise such a dominating influence over the seller that he can fix the resale price which the seller must charge the consumer? Another aspect of the financial problem is as to the prevalence of holding companies—how many of these are there and have they been the means of securing private advantages at the expense of the public? A few years ago, as the result of an investigation into such matters in the United States, the people awoke as from a bad dream to find a vast amount of concentration of control of industrial and financial businesses in relatively few hands, and Congress was required to legislate against such concentration of capital and money power. Should we have the same experience in Canada as the outcome of a similarly searching inquiry?

Canadian Combines Act.

Such an examination of the industrial and commercial fabric of the nation would also show whether public interests are being safeguarded, and whether existing laws are effective for the purposes intended. If not, it would show what further legislation, or abrogation of existing legislation, is necessary at the present stage of expansion, to curb injustice and to foster the greater advance of industry which is so earnestly desired. We have upon the statute book the Canadian Combines Act, enacted by Parliament in 1910; but although the effectiveness of that act when invoked has been attested, there are many ways in which combinations of interests may be effected to secure unduly high prices from the consuming public and yet the Combines Act remain a dead letter.

The fact that this Act has provided the machinery for setting the law in action against a concern which exercises any unreasonable restraint of trade or performs other acts which render it liable under the criminal code, does not of itself insure the public against such criminal conduct. That the Act has not been made the basis of an appeal for a board of inquiry does not indicate that there is no reason for its use, but rather that the method to be employed in its execution is faulty and unsatisfactory. Like its antecedent legislation, the Industrial Disputes Investigation Act, it is recognized as being of doubtful utility; and although it may have some restraining influence in preventing a corporation from doing what is illegal, the information which has come to light in recent times shows that this law is practically useless, at least in some important instances.

Advantages of Combination.

As we have seen in the past few years, and particularly within the last year, enormous increases have taken place in the prices of commodities, which were evidently not justified by the increased expenses of production. Publicity should be given to the facts before it can be relied upon to effect a remedy, but until these facts are know it is idle to speak of the corrective influence of publicity. In the last session of the Dominion parliament one of the people's representatives gave some facts regarding one of our most oppressive corporations, but his information failed just before he reached the crucial point as to the company's organization and methods. So, when we speak of turning the light of publicity upon the affairs of these corporations to see whether the public may not be protected more effectively, we are but emphasizing what is already patent that we are wholly in the dark in regard to their inner and outer workings.

We would not want to see the advantages of combination of capital lost through disrupting industrial and mercantile concerns; but we would like to see a larger share of its benefits divided among those who make such combinations possible. In the case of our railways we have a vast amount of publicity through the regulative work of the Board of Railway Commissioners, and no serious-minded student of railway affairs, not even the railway officials themselves, would want to go back to the former days of unregulated competition, when each company considered its own financial advantage without the consideration for the public interests which is manifested to-day. So must we move forward in these other fields of enterprise, illuminating the pathway of public welfare by the light of investigation. Not wealth accumulation but service rendered should be the test of the success of the individual or the corporation.

Encouragement to Industries.

Not only should corrective measures be devised for eliminating the business practices which are reprehensible, but encouragement should be given to those industries which have been but newly established, or which are getting a new lease of life; and to an investigating commission the managers of such industries could give invaluable information. Take shipbuilding, for example. Those who are actually engaged in the construction of ships could tell of the difficulties they meet and the barriers to be overcome in their special branch of the industrial realm, and for an industry of such national and international importance the experience of those already embarked in the work would furnish the government with facts which would form the basis of favorable action. Canada has the facilities and her great navigation possibilities provide the appropriate occasion for developing her shipbuilding. The past results in this enterprise and the present circumstances attending it might make it clear to the government that this could become one of the most valuable assets of the country; and with complete knowledge as to the best ways in which aid should be extended, the government would be in a position to promote most effectively this phase of the national welfare.

Fostering Foreign Trade.

Such a survey of industrial and trade methods would naturally include within its scope not only domestic trade, but also the means necessary to building up and encouraging foreign trade. We have already had a report from a governmental body dealing with trade opportunities in Great Britain, France and Italy after the war, showing what products this country could supply that would be aceptable to and find a market in those allied countries. Some of the difficulties in the way of entering such markets have also been pointed out. If our manufacturers are to be successful in opening and developing a fair measure of this foreign business, we must have concerted action. The expense incurred in going after such business is almost prohibitive for any one concern.

Manufacturers must work together under the greatest possible encouragement, and the combined judgment of all is essential to the devising of plans by which to capture these markets. Under the stimulus of such an investigationg board as is here proposed, and with the assurance of the utmost govermental support, manufacturers could gather together under favorable auspices and elaborate their plans for the furtherance of their interests in the new countries that are ready to accept our goods. In the pursuit of foreign trade, entirely different methods must be employed from those used in domestic trade. It takes many years to create the facilities of a market in the foreign field, and a great amount of care and tact is required in the cultivation of this foreign demand. Only by carefully considered methods, carried out with ample backing and over a protracted period, can our products find a permanent place in other countries on a selling basis that will be acceptable to them and profitable to us.

Capital and Labour.

We have shown only a few of the advantages which would result from the work of an industrial commission such as that contemplated. But one more fact needs to be brought to our attention before leaving this part of our subject: We refer to the increasing or apparently increasing antagonism between labor and capital and the dangerous tendency toward socialism that is becoming manifest. Many people have the idea that private corporations are only evil and that continually; that they are oppressing the community in order to make large profits for individuals, and that, therefore, the sooner all such enterprises are taken over by the government and run for the universal good the better it will be for all concerned.

We are willing to admit that in some cases very large profits are obtained, but it would seem from evidence at hand that some smaller businesses are making larger profits than many of the larger businesses. An analysis was made recently in the United States in regard to the financial success of the thirty largest industrial combinations, as a result of which it was ascertained that eight of them had been highly successful, seven of them had been fairly successful, ten of them had been unsuccessful and five of them had been disastrous failures; in other words, half of them had utterly failed to measure up to what was naturally expected of them. What would be the outcome of inquiry as to the conditions in Canada? We should probably find much the same result as in the case of the United States. It is greatly to be deplored that too often the daily press lends its columns to the spread of malicious statements, absolutely without foundation, as to the way in which private corporations prey upon an unsuspecting public. Let there be light upon this question, and let us know the certainties regarding it. Only in this way can an intelligent opinion be formed. Without that, unconfirmed rumors and ill-considered predilections have a chance of ripening into what are reported as actual conditions, and the semblance of truth that is given to the half-truth or falsehood may be dangerous to any sane conclusion. Yet such unfortunate conclusion may soon be crystallized into popular prejudice.

Work for the Government.

How should such a survey be effected? Clearly not by private investigation, for corporations would refuse, in not a few instances, to allow access to documents that would give the desired information. Only an investigation by a government body can get to the fundamentals, for in this way witnesses could be put upon their oath and required to tell the truth, and, if necessary, books and accounts could be opened for examination or verification. With the evidence adduced, accompanied, of course, by a report upon each aspect of the investigation, the public would be put in possession of the facts upon which to base a sound judgment. Such a body could be appointed by a party government, but there would be difficulties in the way of securing the best results on account of the pressure of political interests. But the Union government could secure the appointment of a non-partisan investigating commission composed of experts, which would be under no obligation except to fulfil its work most acceptably and obtain the most far-reaching results for the development of the country.

There are still too many in Canada, although their numbers are rapidly decreasing, who are saying: "This business and the way I manage it is my own affair." In reality, the time is here, and progressive employers are sympathetic with it, when the business man can no longer say truthfully that his conduct of business is his own affair; for he is truly a public servant, doing work for the public, kept in business by the public, and he should show the new conscience in business, recognizing himself as the steward of a public trust. We have noted lately a movement on the part of the fraternal organizations to put their business relations of insurance, etc., with their members upon a strictly actuarial basis, and to be responsible for the trust reposed in them. In the organization of corporations the promoters are legally bound to consider themselves responsible for the strictest accountability of all the funds they handle; they must not injure the owners (stockholders) of the corporation. So, in business generally, those who fail to appreciate the fact that in the conduct of their business they have responsibilities to the public, are rapidly dwindling in number. The increasing obligation of business men to the public shows their recognition of the public interests as pre-eminent, and it is to clarify this great issue that a complete and careful inquiry should be made by the government. A very small amount of the government's funds employed in this way would bring great rewards.

[Comment upon this article appears in our editorial columns on page 10.]

MONEY MARKETS

Messrs. Glazebrook and Cronyn, exchange and bond brokers, Toronto, report the following exchange rates to *The Monetary Times*:—

Rate in New York for sterling demand, $4.75¼.

Bank of England rate, 5 per cent.

ACTIVITY IN BOND MARKET

Several Large Issues Offered—Ontario Hydro-Electric Commission's Financing

For the first time since October last the bond market has had important business outside of war loans. During the past ten days several large blocks of bonds have been marketed or offered. The first issue apparently to receive the sanction of the Dominion finance department under the new order-in-council was apparently a block of $4,500,000 Shawinigan Water and Power Company's 2-year 6 per cent. convertible gold notes. These were issued at 97½ and interest, yielding 7⅜ per cent The notes were taken by a syndicate of United States investment bankers and offered by them to investors in that country.

The most notable sale was that of $630,000 5 per cent. 15-year gold bonds of Saskatchewan province. Authority was obtained at Ottawa to make this issue, and a syndicate of Canadian bond houses sold the issue within a few fours. The yield to the investor was 6½ per cent.

Another large offering is $2,000,000 of Manitoba province bonds. There are two blocks, $1,000,000 5 per cent. bonds, due October 1st, 1920, and $1,000,000 6 per cent. bonds, due February 1st, 1928. The former are being issued at 96.97 and the latter at 98.16, with interest in both cases. The yield is 6¼ per cent. This issue has also been approved by the priority board of the department of finance, Ottawa, and is put out at the most attractive figure at which Manitoba bonds have ever been offered to the investor. This is the first instance of any Canadian province issuing a bond bearing 6 per cent. coupons in the past twenty or thirty years.

Ontario Hydro Financing.

Another important announcement this week was made by Sir Adam Beck, chairman of the Ontario Hydro-Electric Commission, at a conference of municipal representatives in Toronto on Tuesday. He stated that arrangements will probably be made through the federal government to finance the commission's Chippewa Creek development without it being necessary to adopt the suggested plan of issuing a Hydro loan through the municipalities within the Hydro system. In the meantime, backed by the guarantee of the Ontario government, the Hydro-Electric Commission has been able to secure a loan of $1,250,000 from the Bank of Montreal to construct the extension to the Ontario Power Company plant that will within the year add 50,000 horse-power to the Hydro supply.

For some time past it has been known that the Hydro-Electric Commission was having difficulty in getting money to carry on the Chippewa Creek development. This difficulty resulted in suggestions that the commission should float a loan of $10,000,000 or $15,000,000 at 5½ or 6 per cent. A little over a week ago Sir Adam Beck held a lengthy conference with the government, following which Hon. T. W. McGarry, provincial treasurer, visited Ottawa. The announced reason for this trip was to make arrangements for financing the extension to the Ontario Power plant, but while in the capital the provincial treasurer had a long talk with the finance minister in regard to the larger Hydro plans, and brought back from Ottawa assurances that the Dominion government would endeavor to take care of urgent financial needs in connection with the project.

Sir Adam intimated that interests in the United States who were anxious to get power offered to co-operate with the commission in the financing and construction of the Chippewa Creek development work.

Municipal Activities.

Among the municipalities there is also activity. Montreal wants a loan of $3,000,000, but the latest report is that it will try to raise the amount by extra taxation. Ottawa will make application for permission to borrow $250,000 for the erection of a civic fuel plant and for the purchase of fuel. Windsor, Ontario, has a block of $250,000 bonds for sale. Hamilton will ask the finance minister's authority to issue debentures to cover the cost of new pumps ordered for the waterworks. The local board of control, however, was informed on Tuesday that Mr. T. J. Stewart and the local senators would oppose any such application. Mr. Stewart has opposed this scheme, and recently announced that an auxiliary electric supply could be obtained to operate electric units. It was decided by the board of control to send a deputation to Ottawa to interview the finance minister, and ask him to permit the city to issue the debentures.

OUR COAL PROBLEM

The world coal situation, including that on this continent, has reached a point at which we must expect adequate action from the government with a view to providing future supplies. The coal resources of the United States, while greater than those of Canada, are sorely taxed to meet even the pressing demands. In the matter of coal supplies, the Dominion must not expect to retain any preferential treatment over other countries, which it may be temporarily receiving, due to war conditions, from the United States. In any event, Canada must expect to feel the effect of such export regulations as the United States from time to time may deem it necessary to impose. Commodities in increasing number are being subjected to embargoes, and those already in force are being stiffened. It was pointed out in *The Monetary Times* of January 4th, in the notable article by Mr. Arthur V. White, a student of this subject, that Canadians need never expect to have electrical energy replace coal and other fuel for heating purposes, except to a relatively limited extent. While Canada is rich in electrical potentialities, yet the physical equipment to develop it speedily cannot now be obtained, factories being fully occupied on other work. Electrical energy is most serviceably employed for strictly power purposes. Fuel, such as coal, oil, etc., is more profitably employed for heating.

In Mr. White's article, it was strongly emphasized that no matter how generous are the sentiments of the United States towards Canada, no country can be expected to send out of its confines that which is essential to the very existence of its own people. No matter what is the goodwill or desire for exchange of commodities, the United States may not be able to cope with the prevailing need. Canadians must be prepared to help themselves by the development of their own fuel resources in a way that they have never done before.

Since the latest article on this subject was published in *The Monetary Times* a few weeks ago, the United States has found it necessary to declare a policy providing that no coal may be exported from that country during 1918 except for purposes contributing materially to the conduct of the war. As pointed out by Mr. White, there is no need to start again learning the A B C of this fuel problem. Officials of the government of Canada, such as those in the Geological Survey, Department of Mines, the Commission of Conservation and other organizations, have knowledge of existing conditions and of practical means by which much of the stress may be relieved. Mr. White said: "To carry out these measures of relief and to place Canada in a reasonably independent position with respect to fuel will take time; but there is no doubt that if matters are dealt with in a broad, statesmanlike manner, and the necessary encouragement of financial and other assistance is given to those who are competent to handle same, Canada will, at a minimum of effort and expense, be relieved of a menace with respect to her coal supply which threatens not only her economic life, but the physical life and well-being of a large proportion of her citizens."

If our outside supply of coal is cut off, we must look to our peat, lignites, and coal areas in East and West. Under the circumstances, the public naturally want to know what is being done to obtain this coal in East and West and what is being done for its distribution to the central portions of the Dominion. There is a proper and rapidly strengthening desire on the part of the public to know what action the Dominion government is taking in these matters; what conferences are being held; whether expert knowledge is being applied; and what time and funds are necessary to obtain lignite and peat in order satisfactorily to relieve the situation, not only for the present but for the future also. As Mr. White has stated, "absolutely no time is to be lost."

VICTORY BONDS IN TRADE

A number of merchants are offering to take Victory Bonds at par, in exchange for merchandise. These merchants are actuated by patriotic motives but they have failed to consider the effect which the acceptance of their offers would have upon the situation. The strongest effort was made to have these war bonds purchased for permanent investment by the people at large, to be paid for out of the past or future savings of those who bought them. Purchases thus made not only result in providing funds for the uses of the government, but they also effect a conservation of labor and material. When the bonds are exchanged for merchandise, it defeats the primary object of their sale, it discourages thrift, and increases expenditures, thus depriving the government of labor and material needed for war purposes.

In addition to this, such bonds when taken in exchange for merchandise must in most cases be immediately sold in the open market, and that is not desirable.

ORGANIZATION FOR WAR

Referring to the subject of taxation by the Dominion government, Sir Herbert Holt, president of the Royal Bank of Canada, at the annual meeting of that institution last week, stated that while he approved the principle of the income tax, he thought the business profits tax was unduly onerous and repressive, and that it had had the effect of antagonizing capital and restricting production.

This is a point which should have the serious consideration of the government. We must recognize that very large sums of money must be raised by special taxation to carry on our share of the war, but this should be done in a way that will not discourage the investment of capital in existing and new enterprises, increasing production in certain directions necessary for the prosecution of the war. A reasonable proportion of excess profits, having in view the exceptional conditions of war, should be taken but at the same time the efforts of capital and labor should be encouraged by the fairest possible legislation.

Sir Herbert Holt, commenting further on the government's action in such matters, said: "While we believe the government's assumption of the powers mentioned is essential to the prosecution of the war, and are in duty bound to give our full support, the extent to which the domestic life and liberties of the people are thus affected is a serious matter. Dictatorial powers once assumed are usually reluctantly relinquished, and if we could not trust the government to annul them when the present purpose has been served, great evil would result..

This point is well made, but as the war proceeds we believe it will be found that only by thorough organization and the free exercise of State regulation in all the Allied countries, will a definite and favorable decision be obtained in the war area. The course of the struggle during the past 3½ years has shown the necessity for assumption of powers by the State which, in times of peace, might be objectionable. State regulation, nation-wide organization, co-operation with capital and labor, and the obtention for national service, of the best business and financial brains, are four of the factors necessary to finish the war quickly and successfully. The vast war machine must be backed by businesslike organization, in which governments and business men should be partners in harmony. During the present year, this tendency is likely to be sharply defined, and if the war runs into future years, the same tendency will be the dominating factor.

CHEMICAL RESEARCH

If the cabled report of the discovery, by United Kingdom interests, of German dye secrets, is correct, a strong weapon against enemy trade after the war will be available. The Imperial, Canadian and United States governments are all devoting considerable attention to the development of the dye and chemical industries. The British government has a substantial interest in an important dye manufacturing corporation and has appropriated a large sum for experiments. The United States government is actively engaged in furthering the dye and chemical industry in that country. Canada has appointed a special commission to investigate these and similar matters. Inquiry is also being made into the production of potash. Germany is said to hold the world's monopoly in this commodity. All the valuable deposits are under German control, the principal source of potash being at Stassfurt. Attempts are now being made in Canada and the United States to produce potash from feldspar and from other resources. A Toronto company is already engaged in experimental work with that object in view and a large Montreal concern has announced its intention to enter this new sphere as a side line. While we must depend upon individual initiative to a great extent for the development of new industries, it is reasonable to expect enterprising governments to encourage experiments of this nature with practical support. The United States, it is understood, has offered as an inducement in research, a large sum to the citizen who can produce potash from one or more of the natural resources of that country, and in quantities which will give an adequate supply.

A NATIONAL INVENTORY

Mr. W. T. Jackman, M.A., of the University of Toronto, in an interesting article in *The Monetary Times* this week (page 5) suggests a national inventory of Canada's industrial organization. He thinks that such an examination would give the necessary information to satisfy public enquiry on many topics and to improve legislation where found necessary. One impression gathered from his exhaustive paper, however, is that a general national stocktaking is a very large order. Such a work, we think, could be best performed by various existing government departments and commissions, with other assistance as might be required. For instance, the Commission of Conservation has already taken an inventory of many of our natural resources. The Dominion statistician, Mr. R. H. Coats, is doing excellent work in gathering statistics from which much of the information suggested by Mr. Jackman will be obtainable.

Mr. Jackman mentions the ship-building industry as an example, proposing that ship-builders tell an investigating commission of the difficulties they meet and the barriers to be overcome in their special branch of the industrial world; but ship-builders have already conferred with the government and the difficulties met in the establishment of the industry are, we understand, being solved satisfactorily.

While we cannot see eye to eye with Mr. Jackman's proposal, there is admittedly a necessity not only for more information and statistical data, but also for their proper application when gathered. This, however, we think, is a matter for government departments, with proper qualified assistance, and for the cabinet council.

In his references to foreign trade, Mr. Jackman makes some important points. He says that to obtain a fair

measure of foreign business we must have concerted action and that the expense incurred in going after such business is almost prohibitive for any one concerned. The antagonism between labor and capital is another matter referred to by the author and one which we think can best be dealt with by conferences of labor and capital, with the friendly co-operation of our governments.

MARKETING CANADIAN WOOL

There are 3,916 Co-operative Associations Here—Ontario's Results Last Year

During the past three or four years considerable encouragement has been given to sheep breeding in Canada by the more scientific grading of wool for the purpose of securing higher prices. In 1914 seven associations were organized for the co-operative sale of wool under the system of grading organized by the department of agriculture, and 206,129 lbs. of wool were graded for societies organized in four provinces —namely, Quebec, Ontario, Manitoba and Alberta. In 1915 the number of organizations formed for this purpose was increased to 19 when approximately 427,000 lbs. were classified and offered for co-operative sale. In 1916 this amount had reached the total of 1,721,598 lbs. with a value of $570,678.69, and every province was represented.

The following table shows the total weight, average price and total value of graded wool by provinces in 1916:—

Province.	Total weight. lb.	Average price. Cents per lb.	Total value.
Eastern Domestic Grades—			
Prince Edward Island ..	28,176¾	38.63	$ 10,876.74
Nova Scotia	18,441½	40.98	7,568.53
New Brunswick	5,130	38.10	1,954.60
Quebec	168,701	42.14	71,205.85
Ontario	17,989	34.95	6,287.43
Total	238,438¼	40.15	$ 97,893.15
Western Domestic Grades—			
Manitoba	150,939	32.25	48,681.40
Saskatchewan	172,570	32.00	55,244.97
Alberta	413,687	31.80	131,565.94
British Columbia	15,751	32.25	5,079.69
Total	752,947	31.95	$240,572.00
Western Range Grades—			
Alberta	744,959	30.94	230,557.62
Saskatchewan	5,430	30.49	1,655.92
Total	750,389	30.93	$232,213.54
Grand total	1,741,774¼	34.96	$570,678.69

There were 3,916 co-operative wool associations in Canada at the end of 1916, divided as follows: Prince Edward Island, 382; Nova Scotia, 224; New Brunswick, 39; Quebec, 1,616; Ontario, 69; Manitoba, 440; Saskatchewan, 475; Albert, 609; and British Columbia, 62.

Results in Ontario Last Year.

At the annual meeting of the Ontario Sheep Breeders' Association last year, it was decided to undertake the co-operative selling of wool, the wool to be collected at a central storehouse in the city of Guelph. Application forms were sent to the sheep raisers in the province of Ontario up to the number of about 10,000. The application gave the rules under which the wool would be received and sold.

During the latter part of May and the first half of June the greater part of the wool was received in the warehouse at Guelph. On June 1st, when sufficient wool had accumulated, grading commenced. As soon as graded the wool was placed in large open bins. By the 23rd of June the greater part of the wool had been graded and buyers had been given an opportunity to see the graded wool as it lay in the warehouse.

. The wool was sold by tender on June 23rd and the buyer agreed to take any ungraded wool that might be in the warehouse. The wool was packed in large sacks and stencilled with the grade and number of pounds. Each grade was also stencilled in numerical order.

Below is given a table showing the number of pounds in each grade, the total number of fleeces and pounds, and the total price paid to the producers:—

Grade.	Pounds.
Fine medium comb	3,461
Medium comb	82,241
Medium clothing	7,184½
Low medium comb	64,636
Coarse comb	93,444
Lustre comb	4,480
Rejects	8,835
G.N.B.	1,351
Total number fleeces	31,641
Total number pounds	271,122

The prices paid to the producers for the above totalled $166,656.

Mr. Geoffrey J. Malcolm, who was formerly chief clerk of the Toronto branch of the General Accident Fire and Life Assurance Corporation, Limited, has been appointed branch secretary of this company. He was previously in the company's head office.

Mr. J. W. McWhinney, who has always taken an active interest in the development of trust companies, and is a member of the executive committee of the Dominion Loan and Trust Company's Association, in addition to a number of other bodies, has resigned the general managership of the Union Trust Company with a view to taking a complete rest.

CANADA'S SHARE OF THE EMPIRE'S WHEAT PRODUCTION

In view of the importance of the wheat industry to the Dominion, we give the following comparative table showing the development of wheat production in Canada during the five years preceding the war:—

Year.	Acreage under wheat in Canada. Acres.	Total yield of wheat in Canada. Bushels.	Production of wheat in the British Empire. Bushels.	Canadian proportion of empire production of wheat. Per cent.
1910	8,863,000	132,049,000	670,800,000	19.69
1911	11,101,000	230,924,000	722,300,000	31.97
1912	10,997,000	224,159,000	725,000,000	30.92
1913	11,015,000	231,717,000	699,500,000	33.12
1914	10,294,000	161,280,000	640,750,000	25.17

Commenting on these figures the Dominions Royal Commission said in their report:—"The immense possibilities of wheat production in Canada are foreshadowed when it is remembered that the acreage under crop is but a small fraction of that available, but as yet untouched by the plough."

The yield in 1914 was abnormally low. On the other hand, the total yield of wheat in the Dominion in the record year of 1915 was approximately 426,000,000 bushels, being an increase of more than 164 per cent. on that for the previous year. The yield last year was estimated in September at about 250,000,000 bushels. The average yield in 1913 and 1914 was 21.04 and 15.67 bushels per acre. These figures by themselves bear witness to the exceptional fertility of the prairie soil.

EUROPEAN SECURITIES FOR THE YEAR

Swing of Values Last Year on London Stock Exchange—Government Bonds Nearly All Lower

The following table, compiled by The New York Evening Post, gives the course of prices for the principal groups of securities on the London Stock Exchange during the past year. In addition to the highest, lowest, and final prices for 1917, comparison is made both with the official figures of July 30th (just before the war) and the closing quotations of 1916:—

Government and Corporation Securities.

	Highest, 1917.	Lowest, 1917.	Closing, 1917.	July 30, 1914.	Closing, 1916.

CENTRAL CANADA LOAN COMPANY

In the annual statement of the company, just issued, a decrease of $19,751 from the profits of the previous year to $201,760 is shown. As there was carried forward from previous accounts $57,053, there was a total available for dividends of $258,814. The usual dividends took $175,000, and there was donated to the Patriotic, Red Cross and other funds $9,951, compared with $12,700 last year. This left a balance at the credit of profit and loss of $73,863, against $57,053 last year.

The balance sheet gives total assets of $9,137,300, compared with $9,472,824 of a year ago. Loans secured by first mortgages amount to $1,513,513, against $1,551,961 a year ago; loans secured by collateral, $1,706,952, against $1,939,647. Bonds and stocks owned which stand on the books at prices well within their present market value, $5,158,029, against $5,182,531 a year ago. Real estate is unchanged at $179,455. Cash on hand amounts to $579,349, against $619,229. Deposits total $1,729,986, against $1,776,783. Debentures show a reduction of $305,537.

An increase of 20 per cent. in the steel production of Canada over that of last year is promised as the result of conferences held between the war committee of the cabinet and the Canadian steel manufacturers. The announcement is one which will be welcome alike to the munitions board and the Canadian railways.

The Northern Trusts Co.

Executor, Administrator, Trustee

No moneys on deposit; No Bonds or Debentures issued

The clause in the Company's Charter enabling it to include in its activities the acceptance of moneys on deposit and the issue of Bonds and Debentures was, at the special request of the original Directorate, struck out.

Sole liability to the public represented by Guaranteed Mortgage Investments to an amount not exceeding the paid up Capital of the Company, and secured in each instance by improved Farm and City Property to the value of more than double the amount of the mortgage investment.

Head Office .. Winnipeg

CANADIAN HOLDINGS OF UNITED STATES STEEL

Foreign holdings of United States Steel Corporation common stock at the end of the quarter closed December 31st, 1917, amounted to 484,190 shares, a gain over the total on September 30th of 7,681 shares. This was the first increase in the ownership of Steel shares outside the United States since the great liquidating movement began after the outbreak of war in 1914. In the September quarter the corporation's stock books showed a slight decline from the June quarter's holdings, but previously the quarterly shrinkage had been extensive, particularly in 1915. At the end of June, 1914, fully 1,274,247 shares of common stock were owned abroad.

The largest gain for any outside country was shown by Canada in the December, 1917, quarter, the 41,639 shares then being 7,659 shares more than the aggregate net gain by all the nations combined being reduced in the final result through a decline of the holdings of other countries. England's block of stock, amounting to 173,074 shares at the end of 1917, was [illegible] res fewer than on September 30th. French owners increased their holdings by about 200 shares, while Holland's remained unchanged. Germany reduced her holdings of both common and preferred somewhat, and Austria reduced her preferred stock ownership substantially, the reports of these changes coming presumably through neutral countries where the shares were sold.

UNITED STATES COAL EXPORTS

Reduction in exportation of coal from the United States suggested by Fuel Administrator Garfield will probably not affect the rank of the United States as a coal exporting country, says a New York despatch. A compilation by the National City Bank, of New York, shows that the United States, prior to the war, held third rank as a coal exporting nation, but, with Germany now cut off from the rest of the world, it has taken second place.

Great Britain, Germany and the United States have for many years supplied the bulk of the coal used in international trade. In 1913 the total amount of coal exported from coal producing countries was, in round figures, about 200,000,000 tons, of which approximately 40,000,000 tons was bunker coal, while a considerable portion of that classed as exported went to the world's coaling stations to be supplied to vessels. The value of the bunker coal used in normal times aggregates $250,000,000 out of a total of $700,000,000 worth passing out of the coal producing countries. In 1913, the year preceding the war, Great Britain exported coal of all kinds amounting to 93,000,000 tons; Germany, 40,000,000 tons; the United States, 29,000,000 tons, while Austria-Hungary was fourth with about 9,000,000 tons.

Much of the 200,000,000 tons exported before the war went to adjacent territories and a much smaller amount than is generally supposed went overseas. In 1917 the United States exported about 32,000,000 tons, of which more than 17,000,000 tons went to Canada, and about 8,000,000 passed into the bunkers of ocean vessels. Exports of coal to Canada for the past year were the largest in the history of the country, and the value is placed at $58,000,000, about one-fourth of the quantity being anthracite. The total value of all the coal exported and passed into bunkers for the year amounted to $113,000,000.

PERSONAL NOTES

Mr. K. J. Dunstan has been elected vice-president of the Toronto board of trade. He is manager at Toronto of the Bell Telephone Company of Canada.

Mr. C. Marriott has been elected vice-president of the Toronto board of trade. For many years he has acted as treasurer of the board. He is a partner in the wholesale milling house of G. Goulding & Sons.

Mr. G. A. Morrow, president of the Imperial Life Assurance Company of Canada, has just received an honor from the King under the new Order of the British Empire. Mr. Morrow is vice-president of the Dominion Securities Corporation and one of Canada's leading financiers. He was born in 1877, at Millbrook, Ont. He is a son of J. M. and Mary (Laisley) Morrow, both born in Canada of Scotch and Irish descent. He received his early education at the Peterboro Collegiate Institute. For three years after leaving college his first position was in the wholesale commercial business. Then he entered the financial field, in which he has shown great activity. He is interested in many corporations. Besides being vice-president and assistant manager of the above companies, he is a director of the Imperial Guarantee and Accident Company, the Western Assurance Company, the British-America Assurance Company, the Central Canada Loan and Savings Company, and the Mississippi River Power Company. His interesting remarks on the life insurance business last week are printed on another page.

(British and Colonial Press Photo.)

G. A. MORROW, TORONTO,

President, Imperial Life Assurance Company of Canada, recently honored by the King under the new Order of the British Empire.

Mr. Joseph Burr Tyrrell, B.M.A., B.Sc., F.G.S., one of Canada's foremost geologists, explorers and mining engineers, has been awarded the Murcheson medal by the Geological Society of London, England. Mr. Tyrrell has spent many years in exploration work in Alaska and Hudson Bay. The Murcheson medal was founded in memory of Sir Robert Impey Murcheson, a famous British geologist, who died in 1871.

Mr. Samuel Trees, a well-known business man, and formerly a member of the Toronto city council, died at the Wellesley Hospital on January 14th. At the time of the Crimean War he was appointed by the British government as an inspector of saddlery supplies to the army, having been in the saddlery business since he left high school. He was an Englishman, a staunch Conservative, and a leading member of All Saints' Anglican Church.

LIFE INSURANCE LEGISLATION

Differences in Provincial Legislation Affecting Life Insurance Contracts in Canada

BY WILLIAM B. TAYLOR, B.A., LL.B.

(Second Article.)

Ontario.

Beneficiaries:

A. Beneficiary must be the parent, bona fide donee, grantee or assignee, or entitled under the will of the insured or by operation of law, otherwise the beneficiary must have a pecuniary interest in the life.

Beneficiaries are divided into 1. Ordinary beneficiary.
2. Preferred beneficiary.
3. Beneficiary for value.

The insured may revoke the interest of an ordinary beneficiary at any time by suitable writing or by his last will and declare the policy payable to another beneficiary or to himself or his estate.

Preferred Beneficiaries:

B. Preferred beneficiaries include husband, wife, children, grandchildren and mother of insured.

The nomination of a preferred beneficiary constitutes a trust in favor of such beneficiary and the money payable under the contract is withdrawn from the control of the insured.

In case of the death of a designated preferred beneficiary, the insured in Ontario has power to declare the share of such preferred beneficiary so dying shall be for the benefit of the insured or his estate, and in default of making such declaration, the share of the preferred beneficiary so dying shall be for the benefit of the surviving nominated preferred beneficiaries, except where the person so dying is a child of the insured and leaves issue, in which case such issue shall be entitled to the share, and in default of there being a surviving preferred beneficiary and no issue entitled to take the share, the insurance shall be for the benefit in equal shares of the wife and children of the insured living at his death, the child of a deceased child taking the share the parent would have taken if living, and in case there is no surviving wife, child or grandchild entitled, the insurance becomes part of the estate of the insured.

Among the class of preferred beneficiaries, the insured may revoke an interest and make new appointments within that class only.

Manitoba.

Beneficiaries:

A. A husband may insure for the benefit of his wife and their children, or for the benefit of his wife, his, her and their children, or for the benefit of his wife or his and her children generally, and a father or mother may insure his or her life for the benefit of his or her children or any of them.

Whatever a man may lawfully do in respect of effecting insurance, may also be done under like conditions by a woman.

Beneficiaries are divided into 1. Ordinary beneficiary.
2. Preferred beneficiary.
3. Beneficiary for value.

Preferred Beneficiaries:

B. Preference is given in Manitoba to the wife, husband and children, and the nomination of any of this class by an insured constitutes a trust in favor of such member of the class and such moneys are not subject to the claims of the insured creditors. The insured has power, however, to revoke the interest of any beneficiary at any time and declare the policy payable to himself or his estate, so that in Manitoba the word "preferred" cannot be applied to any of the beneficiaries under an insurance contract to the same extent as it is effective in some of the other provinces.

Where a child entitled predeceases the insured the descendants of such predeceased child take his share by representation.

Saskatchewan.

Beneficiaries:

A. The insured may bona fide at his own cost place insurance on his life and may appoint any one beneficiary, whether the latter has or has not an insurable interest in the life of the insured.

Beneficiaries are divided into 1. Ordinary beneficiary.
2. Preferred beneficiary.
3 Beneficiary for value.

Preferred Beneficiaries:

B. Preferred beneficiaries include husband, wife, children, grandchildren and mother of the insured.

The appointment of a preferred beneficiary creates a trust in favor of such beneficiary and withdraws the money from the control of the insured, except as to apportionment in that class or an appointment of another member within that class.

In the case of the death of one or more or all of the designated preferred beneficiaries, the insured has the same power over the share of such preferred beneficiary as exists in Ontario.

Among the class of preferred beneficiaries, the insured may revoke an interest and make new appointments within that class only.

Alberta.

Beneficiaries:

A. Any person of the full age of 21 years may effect bona fide at his own charge insurance on his own life for the benefit of himself or for his estate or for the benefit of any other person.

The insured may designate the beneficiary by any mode or declaration as defined by the insurance act and may appoint, apportion the same, alter or revoke the beneficiary, add to or substitute new beneficiaries or divert the insurance money wholly or in part to himself or his estate, except as against a beneficiary for value (expressly stated) and subject to the provisions of the act referring to preferred beneficiaries.

Beneficiaries are divided into 3 classes 1. Ordinary beneficiary.
2. Preferred beneficiary.
3. Beneficiary for value.

On the death of an ordinary beneficiary and no further disposition is made by the insured, the benefit of the insurance reverts to the insured or his estate.

Preferred Beneficiaries:

B. Preferred beneficiaries include the husband, wife, child, grandchildren and mother of the insured.

The interest given to a preferred beneficiary creates a trust in favor of such beneficiary and the insured has power only to alter the appointment to the extent of making an appointment within the class known as preferred beneficiaries.

If one or more or all of the designated preferred beneficiaries predecease the insured, he has the same power as in Ontario as to making a new provision as to the lapsed share or benefit.

British Columbia.

Beneficiaries:

A. There is no special provision in the insurance acts of this province referring to insurance placed by the insured on his life for the benefit of an ordinary beneficiary and the general powers of contract would indicate that he has this privilege where the premium is paid by the insured.

The insured may insure his life for the benefit of his wife or his wife and children or wife and some of his children, and may apportion the amount of insurance among them, may vary a previous declaration or apportionment, extending, transferring and limiting the benefits of the policy to any within the class

Beneficiaries are divided into 1. Ordinary beneficiary.
2 Preferred beneficiary.
3. Beneficiary for value.

Preferred Beneficiaries:

B. Preferred beneficiaries consist of the husband, wife and children of the insured. In case of the death of a preferred beneficiary the insured may nominate another of that class to take the share of the deceased, and in case no new appointment is made the share goes to the surviving beneficiary or beneficiaries in equal shares and in case there are no such surviving beneficiary or beneficiaries, the share becomes the property of the insured.

Quebec.

Beneficiaries:

A. The insured may insure his life for the benefit of his wife and his, or her children or any of them.

Such insurance may be for life or a definite term and payable upon surviving a specified period, but not less than 10 years.

H. O. POWELL, General Manager

Differences in Legislation in Canada in connection with Life Insurance Contracts

A Valuable Pamphlet for Ready Reference

By W. B. TAYLOR, B.A., LL.B.
Secretary of the North American Life Assurance Co.

Will be published shortly by

The Monetary Times Printing Co.

Orders received now. Price $1.00

A married woman may effect insurance and appropriate it without the authorization of her husband.

Insurance may be placed bona fide by the insured on his own life and made payable to an ordinary beneficiary which would consist of those outside of the class above referred to.

Beneficiaries are divided into 1. Ordinary beneficiary.
2. Preferred beneficiary.
3. Beneficiary for value.

Preferred Beneficiaries:

B. Preferred beneficiaries consist of the wife, children and stepchildren.

Where the insurance is for the benefit of wife and children if no apportionment, the insurance is divided among them as specified in the act, the wife taking one half and the children the other half, subdividing equally.

If the insurance is for the benefit of the wife, child or children without apportionment and the wife predeceased the insured, the children take her share and if the child or children predecease, the wife takes their share.

Where a child specified by name predeceases the insured, the issue of such child take by representation.

Where the policy is in favor of wife, children or grandchildren or any of that class, the insured has power to revoke the interest of any member of that class in favor of any other member.

Where the wife predeceases the husband and is the sole beneficiary, her interest reverts to him whether she leave issue or not.

Reversion in favor of the husband takes place where the child who was sole beneficiary dies without issue.

Except in the case where wife, children or grandchildren are the beneficiaries, the insured cannot change the beneficiary where notice of such appointment has been made and accepted by a beneficiary, or the beneficiary has signified his consent to the benefit. If such has not taken place, however, it appears the insured in Quebec may revoke the interest of an ordinary beneficiary.

(To be Continued.)

[The articles of Mr. Taylor, of which the above is the second, will be reprinted by *The Monetary Times* in pamphlet form and will constitute a valuable reference. Orders are being received now.]

WAR MORTALITY OF CANADIAN LIFE COMPANIES

Mr. J. B. McKechnie, F.I.A., general manager and actuary of the Manfacturers Life Assurance Company, Toronto, in a review in the Toronto Globe of the Canadian life insurance situation during 1917, calls attention to the important question of the effect of war mortality upon the Canadian life companies. Prior to and including the year 1914, the death rate among insured lives in Canada, he points out, remained fairly stationary at between seven to eight per 1,000. In 1915 this increased slightly, and in 1916 a further increase was shown. For 1917, Mr. McKechnie suggests that, while some companies have been more fortunate than others, the death rate will average about 11 per 1,000.

The question that will arise in the minds of all those interested in life insurance, and particularly of the hundreds of thousands of policyholders who are looking to the life insurance companies for the protection of their families in case of their death, says Mr. McKechnie, is whether the strain of the war is impairing the efficiency of the life insurance companies. To this question a very decided reply in the negative can be made. The life insurance business in Canada has been built upon scientific principles, and these principles have been carried out in a most conservative manner.

The financial strength of the life insurance companies is such, Mr. McKechnie proceeds, that a mortality of 100 per cent. could be experienced for many years, and still very fair dividends be paid to policyholders. An increased death rate may possibly have the effect of lowering the dividends to policyholders, but the reserve necessary to mature the policy is left unimpaired. Policyholders, therefore, may rest assured that the life insurance companies will continue to serve them as in the past, and that they will be able to carry out their obligations to the fullest extent.

ORGANIZING FOR TRADE

New Department Has Been Inaugurated by the Imperial Government

Further information comes to hand in the latest English mails regarding the important reorganization of the British trade intelligence service. A new department has been inaugurated and will be housed in a building to be erected next to the foreign office, but for the present its headquarters are at the offices of the Commercial Intelligence Department of the Board of Trade in Basinghall Street, London. At a recent conference with representatives of the leading daily and trade newspapers Sir Arthur Steel-Maitland, M.P., explained that the origin of the new department arose from the differences of opinion which existed between the foreign office and the board of trade as to which should control the consular service and the commercial attachés of the various British embassies and legations, and also the superintendence of a good deal of the overseas trade of Great Britain. The formation of a joint department was in a sense a compromise, as it was obvious that the commercial relations with a foreign country might involve political considerations.

Trade and Diplomacy.

He hoped to prevent overlapping of the two departments —the foreign office and the board of trade—in future by carefully delimiting the spheres of action of each. As a general rule, when the matter to be dealt with concerned special business interests such as commercial treaties, it would be handled by the appropriate department of the board of trade; but when the business became predominantly political and not commercial the foreign office would deal with it. Sir Arthur gave as an obvious instance the Baghdad Railway as a commercial matter involving highly important political considerations.

The new department, therefore, will absorb several subdepartments of the board of trade and the foreign office, including: (1) The commercial intelligence department of the board of trade; (2) the war trade intelligence department of the foreign office; (3) the foreign trade department of the foreign office.

War Trade Problems.

The direction of the commercial and consular department of the foreign office will also be placed under the personal supervision of Sir Arthur Steel-Maitland until it is possible to combine the four groups in the new building. The war trade intelligence department of the foreign office, created to deal with problems of trade connected with the war and the blockade, will be "worked in" as soon as its war work is completed. The foreign trade department of the foreign office, which deals with questions of enemy traders with a view to putting them on the statutory list, and, constructively, in replacing friendly for inimical firms, will also be assimilated.

A scheme has also been devised for grouping the United Kingdom according to trade and industry, and the overseas countries in subsections geographically, so as to bring the two readily and easily in touch. The new department will not only collect information, but it will have the power to take action in matters relating to trade, and will deal with all questions affecting the welfare and promotion of the trade of the country, subject to the political and commercial reservations above mentioned.

Practical Advisory Committee.

It is intended to form an influential and practical advisory committee of representatives of finance, commerce, manufacturing interests, and labour to tackle new problems and formulate proposals. Important alterations are to be made to the "Board of Trade Journal" as soon as existing contracts expire. The status of trade commissioners of the board of trade dealing with the trade of the British Empire, and of consuls and attachés of the foreign office concerned with trade in foreign countries, is to be improved, and the salaries of these gentlemen increased, plus allowances according to local circumstances.

A recent investigation conducted in London, England, resulted in the conclusion that an all-round increase of 10 per cent. in wages and in the cost of commodities on the home market involves an increase in national expenditure of about $650,000,000.

EXECUTOR'S FEES

The proper management of an Estate entails skill, experience and labor on the part of the Executor, whether he be an individual or a corporation. The Executor's remuneration, in either case, is a small percentage and it is fixed by the court so that in appointing your Executor the efficiency of the organized Corporation costs no more than the service of an individual. In drawing up your Will, we solicit appointment as your Executor and refer to our thirty five years' experience as a recommendation.

CANADA'S FLAX PRODUCTION

Irish Linen Problem To-day Affords Opportunity to Dominion

(From a Belfast Correspondent.)

In Belfast at present the wages paid by the big linen mills, and also by the collateral shipbuilding industry, are so enormous that the trade in fur coats has never known such a boom. Nevertheless, though presently in the height of prosperity from the aspect of the worker, it is doubtful if ever the Irish linen business was so involved in a more tangled skein of doubts and troubles than just now. The Irish harvest is so far above the average as to give 26,000 tons of flax possibly as the production. But when you reckon that this is marketed at something approaching $1,100 per ton it makes the raw, rough and undressed fiber value for 25 cents per pound, and in its further stage as flax yarn worth four times that figure. But the big linen trade of the world is not by any means entirely dependent on Irish-grown flax even if it is very largely based on Irish manufactured linens. The foreign supply of flax to hand is up to that of last year so far, both in quality and quantity, but with Russia's disastrous defection from the ranks of the allies no more can be expected from this quarter now, nor when the ice breaks in spring again.

Severe Restrictions Imposed.

Nor can any seed for sowing be anticipated either, from Russia. To supply the average trade demands for linen this total supply of flax at present accumulated in Ireland would be altogether insufficient for the world. So the situation is made even worse now that the government as an extra special customer insists that its order—and only the initial order to boot—for fifty millions of fine aeroplane linen must be first fulfilled. It may be deduced then that Canada, the United States, South America and Australia must perforce go without linen, or accept cotton instead.

Already the British government has put severe restrictions on the supply of Irish flax to spinners. They are now allowed only one-half of their usual consumption, and in some cases have to struggle through without any. Export of linen yarns had been forbidden entirely, and it may be only a matter of weeks before the production of linen not intended for government purposes is entirely interdicted.

Even Unions Uncertain.

The introduction of substitutes is at all times hazardous to the right development of any industry. To-day margarine has largely replaced butter, and when peace times return it is probable that millions, who some years ago were insistent on butter, will not display so persistent a preference. Yet the Belfast linen manufacturers had hopes that by offering their customers unions—flax and cotton mixture cloths—with all the finish and smartness that made the Irish turned out linens world famous, they could retain their patronage. It now would seem, however, that with the rigorous control of flax such may be debarred from being so used to constitute the wefts so necessary for these union fabrics. As a matter of fact, this impending fear has already sent up the prices of unions 15 per cent. within a few weeks.

Many of the linen looms are unsuitable for cotton weaving, and in this branch of the textile producing Belfast manufacturers willingly admit that neither in their looms, their workers' adaptability, their own financial finesse, nor in their methods of marketing, could they hope to compete in any degree of profitable success with Lancashire producers. Yet withal no avenue is open to their energies save in fancy cottons, voiles and other goods suitable for blouses, cotton damasks, etc.

Outlook Is Threatening.

No prospect of any change for the better is apparent. Indeed, there is full probability that the situation will grow much worse before it dawns better. Already hanging over the linen industry, like a black cloud, is the impending fear that such supply of flax seed as will be forthcoming for next spring's sowing will be not alone insufficient but of too poor and unpromising quality as to lend any great hopes of any successful home grown crop.

Moreover, even should the 1918 Irish crop be at all equal to last season's, the greater supply from Russia—on which the Irish linen manufacture was altogether dependent for four-sixths of its raw material—will be subverted to Germany. And this would give our Hun enemy an advantage which years could not overtake in the world's markets. The Russian debacle came too late in the year to have procured Russian seed and to have arranged for flax supplies to be forthcoming elsewhere during next year. It is the verification once again of what disastrous consequences may follow the fallacy of keeping one's eggs in one basket only.

Can Canada Help?

Withal the situation is accepted philosophically by the half-million of people who are associated with the great linen industry which that little corner of north-east Ireland has for a couple of generations past made the hub of the world's supply. The same policy is not to give way to despair, but to find the best way out. The silver lining in the black cloud is that linen may soon provide Canada's opportunity to supply not alone a goodly portion of the flax fibre for next autumn's linen manufacture, but also to provide much of the seed. If this should prove to be so Canada and Ireland will have forged a bond of commerce and intimacy which is certain to be indissoluble.

NATIONAL LIFE INSURANCE COMPANY

A good statement was presented by the directors of the National Life Insurance Company, Toronto, at the annual meeting last week. The volume of business in force at the end of the year was $22,686,816. This compares with a total of over $23,000,000 a year ago. The decrease in the amount is accounted for, the company explains, by writing lapsed policies off the books, thus giving the company a volume of business in force which, it is thought, will be comparatively little affected by lapsation. The premium income last year was $777,854. The cash interest income amounts to $181,393, showing an increase over 1916 of $20,254. This is more than sufficient to meet the death claims occurring in 1917, which were $166,596 net, the gross being $193,286. This difference was made by payment of policies reinsured with other companies.

The company has included in the liabilities all war claims of which notice has been received, notwithstanding the fact that the war claims are not a claim until receipt of official certificate from the military department at Ottawa. Apart from the proper reserve, the company has provided for and charged as a liability the sum of $86,844 as extra reserves. Heretofore the National Life did not charge as a liability commissions in process of adjustment with agents. This year there has been included as a liability under this heading the sum of $7,538.

There was also charged as a liability all taxes payable in 1918, amounting to $8,781, also interest on policy loans paid in advance, amounting to $10,944. After all of these deductions the surplus to policyholders was $350,014. The increase in assets for the year was $435,477.

According to the government blue book for 1916, the total cash income of the company, including reinsurance premiums of $40,188, was $703,723. For the year 1917 it was $942,427, which is an increase in income of $238,703. The average rate of interest on investments is 5.44 per cent. No interest or principal is overdue or in arrears on any of the invested funds of the company. This record has been maintained for over eighteen years—a very satisfactory record. The amount of new assurance received for 1917 was $5,000,000, and the amount for which policies were issued was $4,336,237. The gain in assurance in force for the year was $1,448,669. The total amount paid out for war claims since the beginning of the war is $93,726.

Mr. Albert J. Ralston is first vice-president and managing director of the company, and Mr. F. Sparling is secretary. Mr. Elias Rogers heads an active directorate. The company has also an excellent field force.

Two orders were issued by the board of grain supervisors at Winnipeg on January 11th, one fixing the price of No. 3 Ontario winter wheat at $2.19 per bushel, basis in store Montreal, to be effective as from January 10th until August 31st, and the other that the Canadian Northern Railway unload all cars of wheat shipped east from points on designated subdivisions into the government elevators at Saskatoon for account of the Wheat Export Company.

"INVESTMENTS"

A MUCH MISUSED TERM

Many who should be, and think they are laying up money for their old age, are misled into so-called "investments," where their hard-earned money is jeopardized, and frequently lost, though it is of the utmost importance to them and to those who may be dependent upon them that its absolute safety should be beyond peradventure.

To those who should invest safely and with caution, not speculate, the bonds of the Canada Permanent Mortgage Corporation can be confidently recommended. This Corporation is most conservative in the investment of the funds entrusted to it. For more than sixty years it has held a leading position among Canada's financial institutions, and its bonds are a LEGAL INVESTMENT FOR TRUST FUNDS. They are issued for one hundred dollars and upwards. Write for full particulars.

WORK OF RAILWAY WAR BOARD

It Has Been of Marked Service to Country, Says General Secretary Seal

"The railway situation in Canada," said Mr. W. M. Seal, general secretary of the Canadian Railway War Board, in an interview in New York, "differs from the situation in the United States in three respects. First, the Canadian roads have been dealing with war conditions since August, 1914; the American for only a few months. Second, Canada's chief railways, unlike the American roads, are nation-wide in organization and operation. In dealing with nation-wide conditions each Canadian transcontinental has unity of control over its coast-to-coast traffic. But in the United States strategic manipulation of traffic has been most difficult owing to the fact that there is no American railway, singly controlled, running from Atlantic to Pacific. Control of American coast-to-coast movement can only be had by joining up many different roads, each with a different management and different usages.

Results of War Board's Differ.

"Third, the fact that there are in the United States 700 railways, whereas in Canada there are only three large systems (and less than sixty roads, counting small and large as well), made the work of the American Railroads' War Board difficult of success, while the work of the Canadian Railway War Board has already been of marked service to the country. A war board that can co-ordinate the activities of three or four big lines faces a very different proposition when the number of roads is raised by hundreds. In Canada to-day shortages on road are taken care of at once, out of the surpluses of sister roads. Congestion on one is handled by all the roads working in concert through the Canadian Railway War Board.

Shortage of Cars Owing to America's Condition.

"Although, owing to American conditions, Canada is still short many thousands of her own cars detained in the United States, in the meantime shortages in such things as potato cars, apple cars, coal cars or engines, trackage, or terminal facilities, are constantly and almost instantly met through the Canadian Railway War Board. Needless to say, the roundabout routing of freight, which was one of the features of American railway competition does not exist in Canada."

The Dominion government has appointed a special committee of six members of the Dominion cabinet to make a study of the Canadian railway situation. The proposed increase in freight rates is not to go into effect until this committee hands down its report. The committee is headed by the Hon. Mr. Reid, minister of railways.

TROUBLES OF RUSSIAN BONDS

The cabled statement of a London daily last week to the effect that the Bolsheviki planned to repudiate all Russian bonds in the hands of foreigners, and almost all of the bonds held by Russian subjects, caused a drop of 7 to 9 points in the external bonds in this market; the 5½s dropped to 43 and the 6½s to 48. Eighteen months ago, when the bonds were brought out, 5½s sold at 94⅝ and the 6½s at 102¼.

The full text of Chancellor Bonar Law's remark to the Imperial parliament on the rumors of Russia's repudiation of her foreign debt has been received in Canada. In the committee of ways and means he said:—

"I do not think the committee ought to exaggerate the meaning of what had happened in Russia. It is not too much to say that no great state has ever entirely repudiated its national debt, and even in a country like Turkey, although there has been modification, there has never been complete repudiation. Russia is a country with probably as great natural resources as any other country in the world, and it is almost certain that, sooner or later, there will be a stable government there.

"But there is something more. If there was ever a stable government there, Russia, perhaps more than most countries, knows that the development of its resources and its prosperity would be impossible without financial assistance from other countries, and she also knows that that financial assistance would be impossible unless its previous debts were accepted by her government. I, for one, do not believe that the money will not be recovered sooner or later by this country."

WORLD TRADE LARGEST IN HISTORY

United States Leads With Nine Billions, Great Britain Second With Seven Billions

International trade of 1917 will show a larger total than in any earlier year, according to an estimate of the National Bank of New York. It includes eleven months' actual figures for the United States and United Kingdom, ten months for Canada and somewhat shorter periods for the other principal countries, covering, however, a sufficient proportion of the year to justify an estimate that the total international trade of the year will be the largest in history.

In the case of the United States the total trade of the year is estimated at approximately $9,000,000,000, against less than $4,000,000,000 in 1913. In Great Britain the total for the eleven months is over $7,000,000,000, against $5,750,000,000 in 1913. Canada's total for ten months ending with October is over $2,000,000,000, against $88,000,000 in the same months of 1913, and Japan for the nine months ending with September $914,000,000, against $507,000,000 in the corresponding months of 1913. For France no official figures are available for 1917, though the imports estimated by an examination of figures from other countries to France are apparently about 50 per cent. more than in 1913.

In the Central Powers no official figures are available, though it is known that their over-sea trade is, of course, cut off; they have imported very largely from adjacent neutral countries and the exchanges between the countries forming the group now known as the "Central Powers," have also been very great. In the Allied countries a part of their trade, that conducted by or on behalf of the government, has been omitted from the official figures.

Trade of the Allies.

The largest change is that of the Allies. The total trade of Great Britain, France, Italy, Russia, United States, Canada and Japan in 1913 was a little more than $18,000,000,000, while the figures thus far reported for the current year suggest that their total for 1917 may approximate $25,000,000,000.

The neutral sections of the world show little change in their grand total of trade in 1917 as compared with 1913, though there are marked changes in its characteristics. In South America the imports of 1917 are far below those of 1913, in which year the imports of that continent were the highest in its history. The imports of all South America in 1913 exceeded $1,000,000,000, and the 1917 official reports from that continent up to this time indicate that the total imports of 1917 will be little more than half those of 1913, though the 1917 exports will apparently exceed those of 1913 by about 25 per cent.

Oriental Trade.

Oriental trade of 1917 will somewhat exceed that of 1913. In Japan exports are double those of 1913, and imports show an increase of about 50 per cent. In China the imports show a decline, and while there is a good demand for her silk at high prices, the best markets for her tea have been difficult of access. India shows a decline in imports and a slight reduction of exports, due chiefly to lack of transportation. The great rubber plantations of Ceylon, the Malayan Peninsula and the Dutch East Indies, however, show large increases in their production and sales, and the sugar output of Java was larger and at higher prices than formerly.

The neutral countries of Europe show material increases in the value of their exports, but slight decreases in the value of their imports.

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the week ended January 11th, 1918:—

La Rose Mines, 106,370; Right-of-Way Mines, 103,085; Beaver Mines, 79,971; Tretheway Mines, 40,000; McKinley-Darragh-Savage Mines, 84,211; Temiskaming Mining Company, 74,008; Dominion Reducing Company, 257,300; Buffalo Mines, 190,935; O'Brien Mine, 128,010. Total, 1,063,890 pounds, or 531 tons.

The total shipments since January 1st, 1918, now amount to 1,807,532 pounds, or 903 tons.

FORTY-NINTH ANNUAL MEETING OF

The Royal Bank of Canada

SIR HERBERT HOLT, PRESIDENT, DEALS WITH PRINCIPAL FACTORS THAT HAVE CONTRIBUTED TO PROSPERITY OF COUNTRY, ADVISING CAUTION IN GOVERNMENT ASSUMING TOO GREAT POWERS.

Mr. Edson L. Pease, Managing Director, Recommends Establishment of a Bank of Re-discount, Patterned After the Federal Reserve Bank in the United States.

Mr. C. E. Neill, General Manager, Deals with Progress Made by the Bank During the Year, and Pays Highest Tribute to Over One Thousand Members of Staff Who Have Served Overseas.

The Forty-Ninth Annual General Meeting of the Shareholders was held at the Head Office of the Bank in Montreal, on Thursday, January 10th, at 11 o'clock a.m., Sir Herbert S. Holt in the chair.

Mr. S. D. Boak acted as secretary of the meeting, and Messrs. A. Haig Sims and Alex. Paterson as scrutineers.

The Directors' Report was read by the General Manager, Mr. C. E. Neill.

DIRECTORS' REPORT.

The Directors have pleasure in submitting to the Shareholders the Forty-Eighth Annual Report, for the year ending November 30th, 1917, accompanied by the Statement of Assets and Liabilities.

PROFIT AND LOSS ACCOUNT.

Balance of Profit and Loss Account, November 30th, 1916	$ 852,346.28	
Profits for the Year, after Deducting Charges of Management and all other Expenses, Accrued Interest on Deposits, full Provision for all Bad and Doubtful Debts and Rebate of Interest on Unmatured Bills	2,327,979.51	
		$3,180,325.79
Appropriated as follows:—		
Dividends Nos. 118, 119, 120 and 121, at 12 per cent. per annum	$1,549,404.00	
Transferred to Officers' Pension Fund	100,000.00	
Written Off Bank Premises Account	250,000.00	
War Tax on Bank Note Circulation	128,357.26	
Contribution to Patriotic Fund ..	60,000.00	
Transferred to Reserve Fund	528,300.00	
Balance of Profit and Loss Carried Forward	564,264.53	
		$3,180,325.79

The Assets of the Bank have recently been subjected to the usual careful revaluation.

Branches have been opened during the year as follows: In **Quebec**—Montreal, Bonaventure; Montreal, Sherbrooke and Draper; in **Saskatchewan**—Chamberlain, Dodsland, Swanson, Unity; in **Nova Scotia**—Clarke's Harbour, La Have, Middle Musquodoboit, New Germany; in **Newfoundland**—Marystown; in **Cuba**—Moron, Florida; in Venezuela—Ciudad Bolivar, Maracaibo, Puerto Cabello; in the **Dominican Republic**—Puerto Plata; in the **British West Indies**—Charlestown, Nevis; Plymouth, Montserrat; Scarborough, Tobago; Speighstown, Barbados.

The following branches were closed:—in **Quebec**—Montreal, St. Viateur Street, St. Jean Chrysostome; in **British Columbia**—Vancouver, Broadway East; also the sub-branch at Bulyea, Sask.

The sub-branches at Alyesbury and Dysart, Sask., were made regular branches.

The Head Office and all the branches of the bank have been inspected as usual, during the year.

Your Directors desire to express their appreciation of the efficient manner in which the officers of the bank continue to perform their respective duties, and their regret at the retirement of Mr. W. B. Torrance, the late Superintendent of Branches and Chief Inspector, after thirty years of service in this bank.

All of which is respectfully submitted.

H. S. HOLT, President.
E. L. PEASE, Vice-President.

THE GENERAL MANAGER.

The General Manager, Mr. C. E. Neill, then referred to the Annual Statement as follows:—

The Balance Sheet submitted to-day, evinces a year of remarkable growth. The total assets of the bank are over $335,000,000, nearly double their amount at the beginning of the war. The increase during the past year was no less than $82,000,000. Of this increase, the Quebec Bank, which was absorbed on January 2nd, 1917, contributed approximately $22.000,000.

Total deposits amount to $252,987,382.81, the increase for the year being $52,759,787.23. As I pointed out last year a very satisfactory feature is the absence of large or unusual deposits of a temporary nature.

A remarkable expansion has taken place in our circulation, as in that of other banks. Outstanding notes now exceed our paid-up capital by $15,247,651.49. To cover this excess, $16,000,000 has been deposited in the Central Gold Reserve.

Current loans show a substantial increase, due to the active trade conditions and increased prices of all commodities.

The liquid position of the bank is satisfactory, our liquid assets being 53.9 per cent. of liabilities to the public.

The assistance rendered to the Government in financing the war is indicated by an increase of $28,867,279.29 in Government securities.

Net profits for the year were 18.03 per cent. on capital, as compared with 17.87 per cent. last year—or 8.82 per cent. on combined capital and reserve, as compared with 8.66 per cent. last year.

The Reserve Fund has been increased to $14,000,000 by the addition of $911,700 premium on new stock allotted to Quebec Bank shareholders, and $528,300 from Profit and Loss Account.

It is satisfactory to report that all the bank's securities have been written down to the present market value.

In this time of great expansion, it is manifestly our first duty to keep the bank in a strong and liquid position, especially as regards cash, in order to be fully prepared for any contingency which may arise. The uncertainty as to conditions which will obtain after the war is very great, and we must be fully prepared for any eventuality.

I desire particularly to direct your attention to the splendid work of the staff of the bank during the past year. When we speak of "the staff" nowadays, we mean a very different aggregation from that of the days before the war, and when we ask ourselves what actually constitutes the staff to-day, we find ample scope for reflection. Unconsciously, we think first of those who are away fighting our battles, and those who have lost their lives in the defence of liberty and of our country, and to whom we pay our highest tribute. There is between us a bond of such strength that we feel it can never be dissolved. Over 1,000 of our men have enlisted voluntarily since the beginning of the war. Of these 89 have been killed or have died of wounds, and 30 have been discharged as unfit for further military service. 19 of the latter have again taken up their duties in the bank.

To those, who, through unavoidable causes, have not been privileged to take an active part in the great struggle, and who are carrying on at home, in the face of many difficulties, we also desire to pay tribute. The large number of enlistments has rendered the satisfactory operation of the bank's business increasingly difficult, as the places of enlisted men have been filled by more or less inexperienced clerks. We are doing the best we can under the circumstances, and it is our intention not to apply for a greater number of exemptions from military service, than we feel to be absolutely necessary.

PRESIDENT'S ADDRESS.

In moving the adoption of the Directors' Report, Sir Herbert S. Holt, President, said:—
